ARTICLE 1—DEFINITIONS AND TERMINOLOGY

1.01 *Defined Terms*

- A. Whenever used in the Procurement Bidding Requirements or Procurement Contract Documents and printed with initial capital letters, the terms listed below will have the meanings indicated, which are applicable to the singular or plural thereof. In addition to terms specifically defined, terms with initial capital letters in the Procurement Contract Documents include references to identified articles and paragraphs, and the titles of other documents or forms.
1. *Addenda*—Written or graphic instruments issued prior to the opening of Bids which clarify, correct, or change the Bidding Requirements or the proposed Procurement Contract Documents.
 2. *Application for Payment*—The document prepared by Seller, in a form acceptable to Buyer, to request progress or final payments, and which is to be accompanied by such supporting documentation as is required by the Procurement Contract Documents.
 3. *Bid*—An offer or proposal of a prospective Seller submitted on the prescribed form setting forth the prices for the Goods and Special Services to be provided.
 4. *Bidder*—An individual or entity that, as a prospective Seller, submits a Bid to Buyer.
 5. *Buyer*—The individual or entity purchasing the Goods and Special Services.
 6. *Change Directive*—A written directive from Buyer to Seller issued on or after the Effective Date of the Procurement Contract, ordering an addition, deletion, or revision in the Goods and Special Services.
 7. *Change Order*—A document which is signed by Seller and Buyer and authorizes an addition, deletion, or revision to the Procurement Contract Documents or an adjustment in the Procurement Contract Price or the Procurement Contract Times, issued on or after the Effective Date of the Procurement Contract. Change Orders may be the result of mutual agreement by Buyer and Seller, or of resolution of a Claim.
 8. *Claim*—A demand or assertion by Buyer or Seller seeking an adjustment of Procurement Contract Price or Procurement Contract Times, or both, or other relief with respect to the terms of the Procurement Contract. A demand for money or services by a third party is not a Claim.
 9. *Contractor/Assignee*—A construction contractor with which Project Owner enters into a construction contract, and to which Project Owner, as initial Buyer, assigns this Procurement Contract.
 10. *Effective Date of the Procurement Contract*—The date indicated in the Procurement Agreement on which the Procurement Contract becomes effective.
 11. *Electronic Document*—Any Project-related correspondence, attachments to correspondence, data, documents, drawings, information, or graphics, including but not limited to Shop Drawings and other Submittals, that are in an electronic or digital format.

12. *Electronic Means*—Electronic mail (e-mail), upload/download from a secure Project website, or other communications methods that allow: the transmission or communication of Electronic Documents; the documentation of transmissions, including sending and receipt; printing of the transmitted Electronic Document by the recipient; the storage and archiving of the Electronic Document by sender and recipient; and the use by recipient of the Electronic Document for purposes permitted by this Procurement Contract. Electronic Means does not include the use of text messaging, or of Facebook, Twitter, Instagram, or similar social media services for transmission of Electronic Documents.
13. *Engineer*—The individual or entity designated as such in the Procurement Agreement.
14. *Field Order*—A written order issued by Engineer which requires minor changes in the Goods or Special Services, but which does not involve a change in the Procurement Contract Price or Procurement Contract Times.
15. *Goods*—The tangible and movable personal property that is described in the Procurement Contract Documents, regardless of whether the property is to be later attached to realty.
16. *Goods and Special Services*—The full scope of materials, equipment, other items, and services to be furnished by Seller, including Goods, as defined herein, and Special Services, if any, as defined herein. This term refers to both the Goods and the Special Services, or to either the Goods or the Special Services, and to any portion of the Goods or the Special Services, as the context requires.
17. *Laws and Regulations; Laws or Regulations*—Any and all applicable laws, statutes, rules, regulations, ordinances, codes, and binding decrees, resolutions, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.
18. *Milestone*—A principal event specified in the Procurement Contract that Seller must attain by the date or within the number of days indicated, including but not limited to the delivery of the Goods and the furnishing of Special Services.
19. *Notice of Award*—The written notice, by Buyer to a Bidder, of Buyer’s acceptance of the Bid.
20. *Point of Destination*—The specific address of the location where delivery of the Goods will be made, as stated in the Procurement Agreement.
21. *Procurement Agreement*—The written instrument, executed by Buyer and Seller, that sets forth the Procurement Contract Price and Procurement Contract Times, identifies the parties and the Engineer, and designates the specific items that are Procurement Contract Documents.
22. *Procurement Bidding Documents*—The Procurement Bidding Requirements and the proposed Procurement Contract Documents (including all Addenda).
23. *Procurement Bidding Requirements*—The advertisement or invitation to bid, Instructions to Bidders, Bid security of acceptable form, if any, and Bid Form with any supplements.
24. *Procurement Contract*—The entire and integrated written agreement between Buyer and Seller concerning the Goods and Special Services.

25. *Procurement Contract Documents*—Those items so designated in the Procurement Agreement, and which together comprise the Procurement Contract. Shop Drawings and other Seller submittals are not Procurement Contract Documents, even if accepted, reviewed, or approved by Engineer or Buyer.
26. *Procurement Contract Price*—The money that Buyer has agreed to pay Seller for furnishing the Goods and Special Services in accordance with the Procurement Contract Documents.
27. *Procurement Contract Times*—The times stated in the Procurement Agreement by which the Goods must be delivered, Special Services must be furnished, and other Milestones must be attained.
28. *Procurement Drawings*—That part of the Procurement Contract Documents prepared or approved by Engineer which graphically shows the scope, extent, and character of the Goods and Special Services to be furnished by Seller. Shop Drawings and other Seller submittals are not Procurement Drawings as so defined.
29. *Procurement Specifications*—That part of the Procurement Contract Documents consisting of written requirements for materials, equipment, systems, standards and workmanship as applied to the furnishing of the Goods and Special Services, and certain administrative requirements and procedural matters applicable thereto.
30. *Project*—The total undertaking to be accomplished for Project Owner by engineers, contractors, and others, including planning, study, design, construction, testing, commissioning, and start-up, and of which the Goods and Special Services are a part.
31. *Project Owner*—The entity that has retained (or will retain) engineers, contractors, and others for the planning, study, design, construction, testing, commissioning, and start-up of facilities and improvements. As of the Effective Date of the Procurement Contract, the Project Owner is the Buyer.
32. *Samples*—Physical examples of materials, equipment, or workmanship that are representative of some portion of the Goods and Special Services and which establish the standards by which such portion of the Goods and Special Services will be judged.
33. *Schedule of Submittals*—A schedule, prepared and maintained by Seller, of required Submittals and the time requirements for Engineer’s review of the Submittals.
34. *Seller*—The individual or entity furnishing the Goods and Special Services.
35. *Shop Drawings*—All drawings, diagrams, illustrations, schedules, and other data or information which are specifically prepared or assembled by or for Seller and submitted by Seller to illustrate some portion of the Goods and Special Services. Shop Drawings, whether approved or not, are not Procurement Drawings and are not Procurement Contract Documents.
36. *Special Services*—Services to be performed by Seller (or its agents or subcontractors) in association with the Goods to be furnished by Seller, as required by the Procurement Contract Documents.
37. *Submittal*—A written or graphic document, prepared by or for Seller, which the Procurement Contract Documents require Seller to submit to Engineer, or that is indicated as a Submittal in the Schedule of Submittals accepted by Engineer. Submittals

may include Shop Drawings and Samples; schedules; product data; sustainable design information; information on special procedures; testing plans; results of tests and evaluations, source quality-control testing and inspections, and field or site quality-control testing and inspections; warranties and certifications; suppliers' instructions and reports; records of delivery of spare parts and tools; operations and maintenance data; record documents; and other such documents required by the Procurement Contract Documents. Submittals, whether or not approved or accepted by Engineer, are not Procurement Contract Documents. Change proposals, Change Orders, Claims, notices, Applications for Payment, and requests for interpretation or clarification are not Submittals.

38. *Successful Bidder*—The Bidder whose Bid the Buyer accepts, and to which Buyer makes an award of the Procurement Contract.
39. *Supplementary Conditions*—The part of the Procurement Contract that amends or supplements these General Conditions.
40. *Unit Price Goods and Special Services*—Goods and Special Services to be paid for on the basis of unit prices (if any).

1.02 Terminology

- A. The words and terms discussed in Paragraphs 1.02.B and 1.02.C are not defined, but have the indicated meanings when used in the Bidding Requirements or Procurement Contract Documents.
- B. *Intent of Certain Terms or Adjectives*
 1. The Procurement Contract Documents include the terms “as allowed,” “as approved,” “as ordered,” “as directed” or terms of like effect or import to authorize an exercise of professional judgment by Engineer. In addition, the adjectives “reasonable,” “suitable,” “acceptable,” “proper,” “satisfactory,” or adjectives of like effect or import are used to describe an action or determination of Engineer as to the Goods and Special Services. It is intended that such exercise of professional judgment, action, or determination will be commercially reasonable and will be solely to evaluate, in general, the Goods and Special Services for compliance with the requirements of and information in the Procurement Contract Documents and conformance with the design concept of the completed Project as a functioning whole, as shown or indicated in the Procurement Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective will not be effective to assign to Engineer any duty or authority to supervise or direct the furnishing of Goods or Special Services or any duty or authority to undertake responsibility contrary to any other provision of the Procurement Contract Documents.
 2. The word “non-conforming” when modifying the words “Goods and Special Services,” “Goods,” or “Special Services,” refers to Goods and Special Services that are unsatisfactory, faulty, or deficient in that they:
 - a. do not conform to or comply with the requirements of the Procurement Contract Documents;
 - b. do not meet the requirements of any applicable inspection, reference standard, test, or approval referred to in the Procurement Contract Documents; or

- c. in the case of Special Services, have not been completed.
 - 3. The word “receipt” when referring to the Goods, means the physical taking and possession by the Buyer under the conditions specified in Paragraph 9.02.B.2.
 - 4. The word “day” means a calendar day of 24 hours measured from midnight to the next midnight.
 - 5. The word "furnish," when used in connection with the Goods and Special Services means to supply and deliver said Goods to the Point of Destination (or some other specified location) and to perform said Special Services fully, all in accordance with the Procurement Contract Documents.
- C. *Procurement Contract Price or Procurement Contract Times*: References to a change in “Procurement Contract Price or Procurement Contract Times” or “Procurement Contract Times or Procurement Contract Price” or similar, indicate that such change applies to (1) Procurement Contract Price, (2) Procurement Contract Times, or (3) both Procurement Contract Price and Procurement Contract Times, as warranted, even if the term “or both” is not expressed.
 - D. Unless stated otherwise in the Procurement Contract Documents, words or phrases that have a well-known technical or construction industry or trade meaning are used in the Procurement Contract Documents in accordance with such recognized meaning.

ARTICLE 2—PRELIMINARY MATTERS

2.01 *Delivery of Bonds and Evidence of Insurance*

- A. When Seller delivers the executed counterparts of the Procurement Agreement to Buyer, the Seller also shall deliver to Buyer the performance bond and payment bond (if the Procurement Contract requires Seller to furnish such bonds).
- B. *Evidence of Seller’s Insurance*: When Seller delivers the signed counterparts of the Procurement Agreement to Buyer, the Seller also shall deliver to Buyer, with copies to each additional insured (as identified in the Procurement Contract), the certificates, endorsements, and other evidence of insurance required to be provided by Seller in accordance with Article 5. Evidence of insurance to be obtained at a later date, such as insurance relating to transit or storage of the Goods, will be provided to Buyer at the time of such insurance is obtained.
- C. *Evidence of Buyer’s Insurance*: After receipt of the signed counterparts of the Procurement Agreement and all required bonds and insurance documentation, Buyer shall promptly deliver to Seller, with copies to each additional insured (as identified in the Procurement Contract), certificates and other evidence of insurance (if any) required to be provided by Buyer.

2.02 *Copies of Documents*

- A. Buyer shall furnish to Seller four printed copies of the Procurement Contract (including one fully executed counterpart of the Procurement Agreement), and one copy in electronic portable document format (PDF). Additional printed copies will be furnished upon request at the cost of reproduction.

2.03 *Electronic Transmittals*

- A. Except as otherwise stated elsewhere in the Procurement Contract, the Buyer, Seller, and Engineer may send, and shall accept, Electronic Documents transmitted by Electronic Means.
- B. If the Procurement Contract does not establish protocols for Electronic Means, then Buyer, Seller, and Engineer shall jointly develop such protocols.
- C. Subject to any governing protocols for Electronic Means, when transmitting Electronic Documents by Electronic Means, the transmitting party makes no representations as to long-term compatibility, usability, or readability of the Electronic Documents resulting from the recipient's use of software application packages, operating systems, or computer hardware differing from those used in the drafting or transmittal of the Electronic Documents.

2.04 *Preliminary Schedules*

- A. Within 15 days after the Effective Date of the Procurement Contract, Seller shall submit to Buyer and Engineer for timely review:
 - 1. a progress schedule of activities, consistent with the Procurement Contract Times, including at a minimum, Shop Drawing and Sample submittals, tests, and deliveries as required by the Procurement Contract Documents.
 - a. The progress schedule will be acceptable to Buyer and Engineer if it provides an orderly progression of the Submittals, tests, and deliveries to completion within the specified Milestones of the Procurement Contract Times.
 - b. Such acceptance will not impose on Buyer or Engineer responsibility for the progress schedule, for sequencing, scheduling, or progress of Seller's performance of its obligations under the Procurement Contract, nor interfere with or relieve Seller from Seller's full responsibility therefor.
 - c. Such acceptance will not be deemed as an acknowledgment of the reasonableness and attainability of the schedule.
 - 2. a preliminary schedule of Submittals.
- B. No progress payment will be made to Seller until an acceptable progress schedule and acceptable schedule of Submittals are submitted to Buyer and Engineer (and other conditions applicable to progress payments are met).

2.05 *Preliminary Conference*

- A. Within 20 days after the Procurement Contract Times start to run, a conference attended by Seller, Buyer, Engineer and others as appropriate will be held to establish a working understanding among the parties as to the Goods and Special Services and to discuss the schedules referred to in Paragraph 2.04.A, procedures for handling Shop Drawings and other Submittals, processing Applications for Payment, and maintaining required records.

2.06 *Safety*

- A. Buyer and Seller shall comply with all applicable Laws and Regulations relating to the safety of persons or property, and to the protection of persons or property from damage, injury, or loss.

- B. When Seller's personnel, or the personnel of any subcontractor to Seller, are present at the Point of Destination or any work area or site controlled by Buyer, the Seller shall be responsible for the compliance by such personnel with any applicable requirements of Buyer's safety programs that are made known to Seller.
- C. If Buyer or its representatives visit the Seller's manufacturing or storage facilities, for testing, inspection, or other purposes, Seller shall inform Buyer in advance of any safety preparations, standards, or programs with which Buyer and its representatives must comply.

ARTICLE 3—PROCUREMENT CONTRACT DOCUMENTS

3.01 *Intent*

- A. The Procurement Contract Documents are complementary; what is called for by one is as binding as if called for by all.
- B. Any labor, documentation, services, materials, or equipment that may reasonably be inferred from the Procurement Contract Documents or from prevailing custom or trade usage as being required to produce or furnish the indicated Goods and Special Services will be provided, whether or not specifically called for, at no additional cost to Buyer.
- C. Unless otherwise stated in the Procurement Contract Documents, if there is a discrepancy between the electronic or digital versions of the Procurement Contract Documents (including any printed copies derived from such electronic or digital versions) and the printed record version, the printed record version will govern.
- D. The Procurement Contract supersedes prior negotiations, representations, and agreements, whether written or oral.
- E. Engineer will issue clarifications and interpretations of the Procurement Contract Documents, as provided in Paragraph 3.04.
- F. Any provision or part of the Procurement Contract Documents held to be void or unenforceable under any Law or Regulation will be deemed stricken, and all remaining provisions will continue to be valid and binding upon Buyer and Seller.

3.02 *Reference Standards*

- A. Reference to standards, specifications, manuals, or codes of any technical society, organization, or association, or to Laws and Regulations, whether such reference be specific or by implication, means the standard, specification, manual, code, or Laws and Regulations in effect at the time of opening of Bids (or on the Effective Date of the Procurement Agreement if there were no Bids), except as may be otherwise specifically stated in the Procurement Contract Documents.
- B. No provision of any such standard specification, manual, reference standard, or code, and no instruction of a supplier, will be effective to change the duties or responsibilities of Buyer, Seller, or Engineer from those set forth in the part of the Procurement Contract Documents prepared by or for Engineer. No such provision or instruction will be effective to assign to Buyer or Engineer any duty or authority to supervise or direct the performance of Seller's obligations, or any duty or authority to undertake responsibility inconsistent with the provisions of the part of the Procurement Contract Documents prepared by or for Engineer.

3.03 *Reporting and Resolving Discrepancies*

A. *Reporting Discrepancies*

1. *Seller's Review of Procurement Contract Documents:* If, before or during the performance of Seller's obligations, Seller discovers any conflict, error, ambiguity, or discrepancy within the Procurement Contract Documents, or between the Procurement Contract Documents and (a) any applicable Law or Regulation, (b) actual field conditions, (c) any standard specification, manual, reference standard, or code, or (d) any instruction of any supplier to Seller, then Seller shall promptly report it to Engineer (or if the Procurement Contract is assigned, then directly to Contractor/Assignee) in writing. Seller shall not proceed with the Goods and Special Services affected thereby until the conflict, error, ambiguity, or discrepancy is resolved, by a clarification or interpretation by Engineer (or if the Procurement Contract is assigned, then by Contractor/Assignee) or by an amendment or supplement to the Procurement Contract Documents issued pursuant to Article 11.
2. Seller shall not be liable to Buyer or Engineer for failure to report any conflict, error, ambiguity, or discrepancy in the Procurement Contract Documents unless Seller had actual knowledge thereof.

B. *Resolving Discrepancies:* Except as may be otherwise specifically stated in the Procurement Contract Documents, the provisions of the Procurement Contract Documents will take precedence in resolving any conflict, error, ambiguity, or discrepancy between the provisions of the Procurement Contract Documents and:

1. the provisions of any standard, specification, manual, code, or instruction (whether or not specifically incorporated by reference in the Procurement Contract Documents); or
2. the provisions of any Laws or Regulations applicable to the furnishing of the Goods and Special Services (unless such an interpretation of the provisions of the Procurement Contract Documents would result in violation of such Law or Regulation).

3.04 *Requirements of the Procurement Drawings and Procurement Specifications*

A. During the performance of Seller's obligations and until final payment, Seller and Buyer shall submit to the Engineer all matters in question concerning the requirements of the Procurement Drawings and Procurement Specifications (sometimes referred to as requests for information or interpretation—RFIs), or relating to the acceptability of the Goods and Special Services, as soon as possible after such matters arise. Engineer will be the initial interpreter of the requirements of the Procurement Drawings and Procurement Specifications, and judge of the acceptability of the Goods and Special Services thereunder.

1. After assignment (if any) Seller shall submit such matters directly to Contractor/Assignee for response or administration, and the Procurement Contract provisions in Paragraphs 3.04.B and C will not apply.

B. Engineer will issue with reasonable promptness a written clarification, interpretation, or decision on the issue submitted, and if necessary, initiate an amendment or supplement to the Procurement Drawings or Procurement Specifications. Engineer's written clarification, interpretation, or decision will be consistent with the overall intent of the Procurement Contract Documents, and will be final and binding on Seller and Buyer. If either Buyer or Seller believes that a written clarification or interpretation justifies an adjustment in the

Procurement Contract Price or Procurement Contract Times, either may make a Claim for such adjustment as provided in Article 12.

- C. If a submitted matter in question concerns terms and conditions of the Procurement Contract Documents that do not involve (1) the performance or acceptability of the Goods and Services, (2) the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise), or (3) other engineering or technical matters, then Engineer will promptly give written notice to Buyer and Seller that Engineer is unable to provide a decision or interpretation.

3.05 *Reuse of Documents*

- A. Seller and its subcontractors and suppliers shall not:
 - 1. have or acquire any title to or ownership rights in any of the Procurement Drawings, Procurement Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of Engineer or its consultants, including electronic media editions, or reuse any such Procurement Drawings, Procurement Specifications, other documents, or copies thereof, on extensions of the Project or any other project, without written consent of Buyer and Engineer and specific written verification or adaptation by Engineer; or
 - 2. have or acquire any title or ownership rights in any other Procurement Contract Documents, reuse any such Procurement Contract Documents for any purpose without Buyer's express written consent, or violate any copyrights pertaining to such Procurement Contract Documents.
- B. The prohibitions of this Paragraph 3.05 will survive final payment, or termination of the Procurement Contract. Nothing herein precludes Seller from retaining copies of the Procurement Contract Documents for record purposes.

ARTICLE 4—COMMENCEMENT AND SCHEDULE

4.01 *Commencement of Procurement Contract Times*

- A. The Procurement Contract Times will commence to run on the Effective Date of the Procurement Contract.

4.02 *Continuing Performance*

- A. Seller shall adhere to the progress schedule established in accordance with Paragraph 2.04.A., as duly adjusted, and the Goods will be delivered and the Special Services furnished within the Procurement Contract Times.
- B. Seller shall carry on furnishing of the Goods and Special Services and adhere to the progress schedule during all disputes or disagreements with Buyer. No furnishing of Goods and Special Services will be delayed or postponed pending resolution of any disputes or disagreements, except as expressly permitted herein, or as Buyer and Seller may otherwise agree in writing.

4.03 *Adjustments to Progress Schedule*

- A. The progress schedule established in accordance with Paragraph 2.04 may be adjusted from time to time as provided below.

1. Seller shall submit to Buyer for acceptance (to the extent indicated in Paragraph 2.04) proposed adjustments in the progress schedule that will not result in changing the Procurement Contract Times. Such adjustments will comply with any applicable provisions of the Procurement Specifications.
2. Proposed adjustments in the progress schedule that will change the Procurement Contract Times must be submitted in accordance with the requirements of Article 11. Adjustments in Procurement Contract Times may only be made by a Change Order.

4.04 *Delays*

- A. If Buyer, Engineer, or anyone for whom Buyer is responsible, delays, disrupts, or interferes with Seller's performance or progress, then Seller shall be entitled to an equitable adjustment in Procurement Contract Price or Procurement Contract Times.
- B. Seller shall not be entitled to an adjustment in Procurement Contract Price or Procurement Contract Times for delay, disruption, or interference caused by or within the control of Seller or anyone for whom Seller is responsible.
- C. If Seller's performance or progress is delayed, disrupted, or interfered with by unanticipated causes not the fault of and beyond the control of Buyer, Seller, and those for which they are responsible, then Seller shall be entitled to an equitable adjustment in Procurement Contract Times. Such an adjustment will be Seller's sole and exclusive remedy for the delays, disruption, and interference described in this paragraph. Causes of delay, disruption, or interference that may give rise to an adjustment in Procurement Contract Times under this paragraph include but are not limited to the following:
 1. severe and unavoidable natural catastrophes such as fires, floods, epidemics, and earthquakes;
 2. abnormal weather conditions;
 3. inspection delays by governmental authorities, and custom delays;
 4. international shipping delays;
 5. acts or failures to act of third-party entities; and
 6. acts of war or terrorism.
- D. *Adjustments of Procurement Contract Times or Procurement Contract Price—General Provisions:* Seller's entitlement to an adjustment of Procurement Contract Times or Procurement Contract Price is limited as follows:
 1. Seller's entitlement to an adjustment of the Procurement Contract Times is conditioned on the delay, disruption, or interference adversely affecting an activity on the critical path to completion of Seller's obligations, as of the time of the delay, disruption, or interference.
 2. Seller shall not be entitled to an adjustment in Procurement Contract Price for any delay, disruption, or interference if such delay is concurrent with a delay, disruption, or interference caused by or within the control of Seller. Such a concurrent delay by Seller does not preclude an adjustment of Procurement Contract Times to which Seller is otherwise entitled.

3. Adjustments of Procurement Contract Times or Procurement Contract Price are subject to the provisions of Articles 11 and 12.
- E. Each Seller request seeking a delay-related increase in Procurement Contract Times or Procurement Contract Price must be supplemented by supporting data that sets forth in detail the following: (1) the circumstances that form the basis for the requested adjustment; (2) the date upon which each cause of delay, disruption, or interference began to affect Seller's progress; (3) the date upon which each cause of delay, disruption, or interference ceased to affect Seller's progress; (4) the number of days' increase in Procurement Contract Times claimed as a consequence of each such cause of delay, disruption, or interference; and (5) the impact on Procurement Contract Price. Seller shall also furnish such additional supporting documentation as Buyer or Engineer may require including, where appropriate, a revised progress schedule indicating all the activities affected by the delay, disruption, or interference, and an explanation of the effect of the delay, disruption, or interference on the critical path to completion.

ARTICLE 5—BONDS AND INSURANCE

5.01 *Performance, Payment, and Other Bonds*

- A. Seller shall furnish a performance bond and a payment bond, each in an amount at least equal to the Procurement Contract Price, as security for the faithful performance and payment of Seller's obligations under the Procurement Contract. These bonds must remain in effect until one year after the date when final payment becomes due or until completion of the correction period specified in Paragraph 9.04, whichever is later, except as provided otherwise by Laws or Regulations, the terms of a prescribed bond form, the Supplementary Conditions, or other provisions of the Procurement Contract.
- B. Seller shall also furnish such other bonds (if any) as are required by the Supplementary Conditions or other provisions of the Procurement Contract.
- C. All bonds must be in the form included in the Bidding Documents or otherwise specified by Buyer prior to execution of the Procurement Contract, except as provided otherwise by Laws or Regulations, and must be issued and signed by a surety named in "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Department Circular 570 (as amended and supplemented) by the Bureau of the Fiscal Service, U.S. Department of the Treasury. A bond signed by an agent or attorney-in-fact must be accompanied by a certified copy of that individual's authority to bind the surety. The evidence of authority must show that it is effective on the date the agent or attorney-in-fact signed the accompanying bond.
- D. Seller shall obtain the required bonds from surety companies that are duly licensed or authorized, in the state or jurisdiction in which the Project is located, to issue bonds in the required amounts.
- E. If the surety on a bond furnished by Seller is declared bankrupt or becomes insolvent, or the surety ceases to meet the requirements above, then Seller shall promptly notify Buyer and Engineer and shall, within 20 days after the event giving rise to such notification, provide another bond and surety, both of which shall comply with the bond and surety requirements of this Procurement Contract.

- F. If Seller has failed to obtain a required bond, Buyer may exercise Buyer's termination rights under Article 14.
- G. Upon request to Buyer from any subcontractor, supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of Seller's obligations, Buyer shall provide a copy of the payment bond to such person or entity.
- H. Upon request to Seller from any subcontractor, supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of Seller's obligations, Seller shall provide a copy of the payment bond to such person or entity.

5.02 *Insurance*

- A. Seller shall provide insurance of the types and coverages and in the amounts stipulated in the Supplementary Conditions.
- B. Failure of Buyer to demand certificates of insurance or other evidence of Seller's full compliance with these insurance requirements or failure of Buyer to identify a deficiency in compliance from the evidence provided will not be construed as a waiver of Seller's obligation to maintain such insurance.
- C. Upon assignment of this Procurement Contract, Seller shall name the Contractor/Assignee as an additional insured and comply with the written request of Contractor/Assignee to provide evidence of insurance.
- D. Buyer does not represent that insurance coverage and limits established in this Procurement Contract necessarily will be adequate to protect Seller.
- E. The insurance and insurance limits required herein will not be deemed as a limitation on Seller's liability under the indemnities and other rights granted to Buyer in the Procurement Contract.

5.03 *Surety or Insurance Companies*

- A. All bonds and insurance required by the Procurement Contract Documents to be purchased and maintained by Buyer or Seller shall be obtained from surety or insurance companies that are duly licensed or authorized in the jurisdiction in which the Project is located to issue bonds or insurance policies for the limits and coverages so required. Such surety and insurance companies must also meet such additional requirements and qualifications as may be provided in the Supplementary Conditions.

ARTICLE 6—LICENSES AND FEES

6.01 *Intellectual Property and License Fees*

- A. Except to the extent stated elsewhere in the Procurement Contract Documents, Seller is not transferring any patent rights, copyrights, or other intellectual property rights for the Goods delivered.
- B. To the extent Seller is manufacturing to Buyer's design, Buyer retains all patent rights, copyrights, and other intellectual property rights in such design.
- C. If an invention, design, process, product, or device is specified in the Procurement Contract Documents for incorporation in the Goods or for the performance of Special Services, and if, to the actual knowledge of Buyer or Engineer, its use is subject to patent rights, copyrights,

or other intellectual property rights calling for the payment of a license fee or royalty to others, then the existence of such rights and payment obligations will be disclosed to Seller in the Procurement Contract Documents.

- D. Seller shall pay all license fees and royalties and assume all costs incident to the use or the furnishing of the Goods, unless specified otherwise by the Procurement Contract Documents.

6.02 *Seller's Infringement*

- A. Subject to Paragraph 6.01, to the fullest extent permitted by Laws and Regulations, Seller shall indemnify and hold harmless Buyer, Engineer, and their officers, directors, members, partners, employees, agents, consultants, contractors, and subcontractors, from and against all claims, costs, losses, damages, and judgments (including but not limited to all reasonable fees and charges of engineers, architects, attorneys and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement or alleged infringement of any patent, copyright, or other intellectual property right by any of the Goods as delivered or Special Services as performed.
- B. Buyer will promptly notify Seller in writing of any claim, suit, or threat of suit by a third party for any infringement or alleged infringement of any patent, copyright, or other intellectual property right with respect to the Goods as delivered or Special Services as performed.
- C. Seller shall promptly defend or settle the claim or suit. Seller shall have control over such claim or suit, bear all expenses, and satisfy any adverse judgment.
 - 1. If Seller fails to defend such suit or claim after written notice by Buyer, Seller will be bound, in any subsequent suit or claim against Seller by Buyer, by any factual determination in the prior suit or claim.
 - 2. If Buyer fails to provide Seller the opportunity to defend such suit or claim, Buyer shall be barred from any remedy against Seller for such suit or claim.
- D. If a determination is made that Seller has infringed upon the intellectual property rights of another, Seller may, at Seller's own expense, obtain the necessary licenses for Buyer's benefit, or replace the Goods and provide related design and construction, consistent with the requirements of the Procurement Contract Documents, to avoid the infringement.

6.03 *Buyer's Infringement*

- A. Subject to Paragraph 6.01, and to the fullest extent permitted by Laws and Regulations, Buyer shall be responsible to Seller for any infringement or alleged infringement of any patent, copyright, or other intellectual property right caused by Seller's compliance with the Procurement Drawings or Procurement Specifications, and will reimburse Seller for any license fee or royalties paid by Seller to others if such payment resulted from any invention, design, process, product, or device specified to be furnished or performed in the Procurement Drawings or Procurement Specifications, but not identified as being subject to payment of such license fee or royalty.
- B. Seller will promptly notify Buyer in writing of any claim, suit, or threat of suit by a third party for intellectual property infringement arising from Seller's compliance with the Procurement Drawings or Procurement Specifications.

- C. Buyer shall defend or settle the claim or suit. Buyer shall have control over such claim or suit, bear all expenses, and satisfy any adverse judgment.
 - 1. If Buyer fails to defend such suit or claim after written notice by Seller, Buyer will be bound, in any subsequent suit or claim against Buyer by Seller, by any factual determination in the prior suit or claim.
 - 2. If Seller fails to provide Buyer the opportunity to defend such suit or claim, Seller shall be barred from any remedy against Buyer for such suit or claim.

ARTICLE 7—SELLER’S RESPONSIBILITIES

7.01 *Performance of Obligations*

- A. Seller shall be solely responsible for the means, methods, techniques, sequences, and procedures necessary to perform its obligations in accordance with the Procurement Contract Documents.
- B. Seller shall supervise, inspect, and direct the furnishing of the Goods and Special Services competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform its obligations in accordance with the Procurement Contract Documents.
- C. Seller shall coordinate the provision of Special Services to avoid or limit interference or disruption of other activities at the location where the Special Services are to occur, including but not limited to ongoing facility operations and construction activities.

7.02 *Labor, Materials and Equipment*

- A. Seller shall provide competent, qualified and trained personnel in all aspects of its performance of the Procurement Contract.
- B. All Goods, and all equipment and material incorporated into the Goods, must be as specified, and unless specified otherwise in the Procurement Contract Documents, must be:
 - 1. new, and of good quality;
 - 2. protected, assembled, connected, cleaned, and conditioned in accordance with the original manufacturer’s instructions; and
 - 3. shop-assembled to the greatest extent practicable.

7.03 *Laws and Regulations*

- A. Seller shall give all notices required by and shall comply with all Laws and Regulations applicable to the performance of its obligations in accordance with the Procurement Contract Documents. Except where otherwise expressly required by such Laws and Regulations, neither Buyer nor Engineer shall be responsible for monitoring Seller’s compliance with any Laws or Regulations.
- B. If Seller furnishes Goods and Special Services knowing or having reason to know that such furnishing is contrary to Laws or Regulations, Seller shall bear all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such performance. It will not be Seller’s responsibility to make certain

that the Procurement Specifications and Procurement Drawings are in accordance with Laws and Regulations, but this provision will not relieve Seller of Seller's obligations under Paragraph 3.03.

- C. Changes in Laws or Regulations not known at the time of opening of Bids (or, on the Effective Date of the Procurement Contract if there were no Bids) that have a direct effect on the cost or time of Seller's performance will be the subject of an adjustment in Procurement Contract Price or Procurement Contract Times. If Buyer and Seller are unable to agree on entitlement to or on the amount or extent, if any, of any such adjustment, a Claim may be made therefor as provided in Article 12.

7.04 "Or Equals"

- A. Whenever an item of material or equipment to be incorporated into the Goods is specified or described in the Procurement Contract Documents by using the names of one or more proprietary items or specific suppliers or manufacturers, the specification or description is intended to establish the type, function, appearance, and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent, or "or equal" item is permitted, other items of material or equipment or material or equipment of other suppliers or manufacturers may be submitted to Buyer for Engineer's review.
 - 1. If in Engineer's sole discretion, such an item of material or equipment proposed by Seller is functionally equal to that named and sufficiently similar so that no change in related work will be required, it may be considered by Engineer as an "or equal" item.
 - 2. For the purposes of this paragraph, a proposed item of material or equipment may be considered functionally equal to an item so named only if in the exercise of reasonable judgment, Engineer determines that: 1) it is at least equal in quality, durability, appearance, strength, and design characteristics; 2) it will reliably perform at least equally well the function imposed by the design concept of the completed Project as a functioning whole; 3) it has an acceptable record of performance and availability of responsive service; and (4) Seller certifies that if approved: a) there will be no increase in any cost, including capital, installation or operating costs, to Buyer; and b) the proposed item will conform substantially to the detailed requirements of the item named in the Procurement Contract Documents.
- B. *Engineer's Evaluation:* Engineer will be allowed a reasonable time within which to evaluate each proposal or Submittal made pursuant to Paragraph 7.04.A. Engineer will be the sole judge of whether to accept or reject such a proposal or Submittal. No "or equal" will be ordered, manufactured or utilized until Engineer's review is complete, which will be evidenced by an approved Shop Drawing. Engineer will advise Buyer and Seller in writing of any negative determination. Notwithstanding Engineer's approval of an "or-equal" item, Seller shall remain obligated to comply with the requirements of the Procurement Contract Documents.
- C. *Special Guarantee:* Buyer may require Seller to furnish at Seller's expense a special performance guarantee or other surety with respect to any such proposed "or-equal."
- D. *Data:* Seller shall provide all data in support of any such proposed "or equal" at Seller's expense.

7.05 *Taxes*

- A. Seller shall pay all taxes and duties arising out of the sale of the Goods and the performance of Special Services. All taxes and duties are included in the Procurement Contract Price, except as noted in the Supplementary Conditions.

7.06 *Submittals*

A. *Shop Drawing and Sample Requirements*

1. Before submitting a Shop Drawing or Sample, Seller shall:
 - a. review and coordinate the Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Procurement Contract Documents;
 - b. determine and verify:
 - 1) all field measurements, quantities, dimensions, specified performance and design criteria, installation requirements, materials, catalog numbers, and similar information with respect to the Submittal; and
 - 2) the suitability of all materials and equipment offered with respect to the indicated application, fabrication, shipping, handling, storage, assembly, and installation pertaining to the performance of Seller's obligations.
 - c. confirm that the Submittal is complete with respect to all related data included in the Submittal.
2. Each Shop Drawing or Sample must bear a stamp or specific written certification that Seller has satisfied its obligations under the Procurement Contract Documents with respect to Seller's review of that Submittal, and that Seller approves the Submittal.
3. With each Shop Drawing or Sample, Seller shall give Engineer specific written notice of any variations that the Submittal may have from the requirements of the Procurement Contract Documents. This notice will be set forth in a written communication separate from the Submittal; and, in addition, in the case of a Shop Drawing by a specific notation made on the Shop Drawing itself.

- B. *Submittal Procedures for Shop Drawings and Samples:* Seller shall label and submit Shop Drawings and Samples to Engineer for review and approval in accordance with the accepted Schedule of Submittals.

1. *Shop Drawings*

- a. Seller shall submit the number of copies required in the Procurement Specifications.
- b. Data shown on the Shop Drawings must be complete with respect to quantities, dimensions, specified performance and design criteria, materials, and similar data to show Engineer the services, materials, and equipment Seller proposes to provide, and to enable Engineer to review the information for the limited purposes required by Paragraph 7.06.C.

2. *Samples*

- a. Seller shall submit the number of Samples required in the Procurement Specifications.

- b. Seller shall clearly identify each Sample as to material, supplier, pertinent data such as catalog numbers, the use for which intended and other data as Engineer may require to enable Engineer to review the Submittal for the limited purposes required by Paragraph 7.06.C.
3. Where a Shop Drawing or Sample is required by the Procurement Contract Documents or the Schedule of Submittals, any related work performed by Seller prior to Engineer's review and approval of the pertinent Submittal will be at the sole expense and responsibility of Seller.

C. *Engineer's Review of Shop Drawings and Samples*

1. Engineer will provide timely review of Shop Drawings and Samples in accordance with the accepted Schedule of Submittals. Engineer's review and approval will be only to determine if the items covered by the Submittals will, after installation or incorporation in the Goods, comply with the requirements of the Procurement Contract Documents, and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Procurement Contract Documents.
2. Engineer's review and approval will not extend to means, methods, techniques, sequences, or procedures of construction, manufacturing, fabrication, installation, or shipping, or to safety precautions or programs incident thereto.
3. Engineer's review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.
4. Engineer's review and approval of a Shop Drawing or Sample will not relieve Seller from responsibility for any variation from the requirements of the Procurement Contract Documents unless Seller has complied with the requirements of Paragraph 7.06.A.3 and Engineer has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the Shop Drawing or Sample. Engineer will document any such approved variation from the requirements of the Procurement Contract Documents in a Field Order or other appropriate Procurement Contract modification.
5. Engineer's review and approval of a Shop Drawing or Sample will not relieve Seller from responsibility for complying with the requirements of Paragraphs 7.06.A and B.
6. Engineer's review and approval of a Shop Drawing or Sample, or of a variation from the requirements of the Procurement Contract Documents, will not, under any circumstances, change the Procurement Contract Times or Procurement Contract Price, unless such changes are included in a Change Order.
7. Neither Engineer's receipt, review, acceptance or approval of a Shop Drawing or Sample will result in such item becoming a Procurement Contract Document.
8. Seller shall furnish Goods that comply with the requirements and commitments set forth in approved Shop Drawings and Samples, subject to the provisions of Paragraph 7.06.C.4.

D. *Resubmittal Procedures for Shop Drawings and Samples*

1. Seller shall make corrections required by Engineer and shall return the required number of corrected copies of Shop Drawings and submit, as required, new Samples for review

and approval. Seller shall direct specific attention in writing to revisions other than the corrections called for by Engineer on previous Submittals.

2. Seller shall furnish required Shop Drawing and Sample Submittals with sufficient information and accuracy to obtain required approval of an item with no more than two resubmittals. Engineer will record Engineer's time for reviewing a third or subsequent resubmittal of a Shop Drawing or Sample, and Seller shall be responsible for Engineer's charges to Buyer for such time. Buyer may impose a set-off against payments due Seller to secure reimbursement for such charges.
3. If Seller requests a change of a previously approved Shop Drawing or Sample, Seller shall be responsible for Engineer's charges to Buyer for its review time, and Buyer may impose a set-off against payments due Seller to secure reimbursement for such charges, unless the need for such change is beyond the control of Seller.

E. *Submittals Other than Shop Drawings and Samples*

1. The following provisions apply to all Submittals other than Shop Drawings and Samples:
 - a. Seller shall submit all such Submittals to the Engineer in accordance with the schedule of Submittals and pursuant to the applicable terms of the Procurement Contract Documents.
 - b. Engineer will provide timely review of all such Submittals in accordance with the schedule of Submittals and return such Submittals with a notation of either Accepted or Not Accepted. Any such Submittal that is not returned within the time established in the schedule of Submittals will be deemed accepted.
 - c. Engineer's review will be only to determine if the Submittal is acceptable under the requirements of the Procurement Contract Documents as to general form and content of the Submittal.
 - d. If any such Submittal is not accepted, Seller shall confer with Engineer regarding the reason for the non-acceptance, and resubmit an acceptable document.
2. Procedures for the submittal and acceptance of the Progress Schedule, the Schedule of Submittals, and the Schedule of Values are set forth in Paragraphs 2.04 and 2.05.

7.07 *Indemnification*

- A. To the fullest extent permitted by Laws and Regulations, Seller shall indemnify and hold harmless Buyer, Engineer, Project Owner, and any assignee of Buyer, including Contractor/Assignee, and their officers, directors, members, partners, employees, agents, consultants, contractors, and subcontractors, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the performance of Seller's obligations under the Procurement Contract, provided that any such claim, cost, loss, or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible property (other than the Goods themselves), including the loss of use resulting therefrom, but only to the extent caused by any negligent act or omission of Seller, or any individual or entity directly or indirectly employed by Seller or anyone for whose acts Seller may be liable.

- B. In any and all claims against Buyer, Engineer, Project Owner, or any assignee of Buyer, including Contractor/Assignee, or their officers, directors, members, partners, employees, agents, consultants, contractors, or subcontractors, by any employee (or the survivor or personal representative of such employee) of Seller, any subcontractor, any supplier, or any individual or entity directly or indirectly employed by any of them to furnish any of the Goods and Special Services, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 7.07.A will not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for Seller or any such subcontractor, supplier, or other individual or entity under workers' compensation acts, disability benefit acts, or other employee benefit acts.

7.08 *Concerning Subcontractors and Suppliers*

- A. Seller may retain subcontractors and suppliers for the performance of parts of the furnishing of the Goods and Special Services. The Seller's retention of a subcontractor or supplier will not relieve Seller's obligation to Buyer to perform and complete the furnishing the Goods and Special Services in accordance with the Procurement Contract Documents.

ARTICLE 8—SHIPPING AND DELIVERY

8.01 *Shipping*

- A. Seller shall select the carrier and bear all costs of packaging, transportation, insurance, special handling, and all other costs associated with shipment and delivery.

8.02 *Delivery*

- A. Seller shall deliver the Goods free on board (FOB) to the Point of Destination, freight prepaid, in accordance with the Procurement Contract Times set forth in the Procurement Agreement, or other date agreed to by Buyer and Seller.
- B. At least 10 days before shipment, Seller shall provide written notice to Buyer of the manner of shipment and the anticipated delivery date. The notice must also include any instructions concerning special equipment or services required at the Point of Destination to unload and care for the Goods. Seller shall also require the carrier to give Buyer at least 24 hours' notice by telephone prior to the anticipated time of delivery.
- C. Buyer will be responsible and bear all costs for unloading the Goods from carrier.
- D. Buyer will assure that adequate facilities are available to receive delivery of the Goods at the time established for delivery, or on another date agreed to by Buyer and Seller.
- E. No partial deliveries will be allowed, unless permitted or required by the Procurement Contract Documents or agreed to in writing by Buyer.
- F. Provisions governing inspection on delivery are set forth in Paragraph 9.02.

8.03 *Risk of Loss*

- A. Risk of loss and insurable interests transfer from Seller to Buyer upon Buyer's receipt of the Goods.
- B. Notwithstanding the provisions of Paragraph 8.03.A, if Buyer rejects the Goods as non-conforming, the risk of loss on such Goods will remain with Seller until Seller corrects the non-conformity or Buyer accepts the Goods. If rejected Goods remain at the Point of

Destination pending modification and acceptance, then Seller shall be responsible for arranging adequate protection and maintenance of the Goods at Seller's expense.

ARTICLE 9—BUYER'S RIGHTS

9.01 Seller's Warranties and Guarantees

- A. Seller warrants and guarantees to Buyer that the title to the Goods conveyed will be proper, its transfer rightful, and free from any security interest, lien, or other encumbrance. Seller shall defend, indemnify, and hold Buyer harmless against any liens, claims, or demands contesting or affecting title of the Goods conveyed.
- B. Seller warrants and guarantees to Buyer that all Goods and Special Services will conform with the Procurement Contract Documents, and with the standards established by any Samples approved by Engineer. Engineer shall be entitled to rely on Seller's warranty and guarantee. If the Procurement Contract Documents do not otherwise specify the characteristics or the quality of the Goods, the Goods must comply with the requirements of Paragraph 7.02.B.
- C. Seller's warranty and guarantee hereunder excludes defects or damage caused by:
 - 1. abuse, improper modification, improper maintenance, or improper operation by persons other than Seller;
 - 2. excessive corrosion or chemical attack, unless corrosive or chemically-damaging conditions were disclosed by Buyer in the Procurement Contract Documents and the Procurement Contract Documents required the Goods to withstand such conditions;
 - 3. use in a manner contrary to Seller's written instructions for installation, operation, and maintenance; or
 - 4. normal wear and tear under normal usage.
- D. Seller's obligation to furnish the Goods and Special Services in accordance with the Procurement Contract Documents will be absolute. None of the following will constitute an acceptance of Goods and Special Services that are non-conforming, or a release of Seller's obligation to furnish the Goods and Special Services in accordance with the Procurement Contract Documents:
 - 1. observations by Buyer, Engineer, or Project Owner;
 - 2. recommendation by Engineer or payment by Buyer of any progress or final payment;
 - 3. use of the Goods by Buyer or Project Owner;
 - 4. any acceptance by Buyer, Engineer, or Project Owner, or any failure to do so;
 - 5. the end of the correction period established in Paragraph 9.04;
 - 6. the issuance of a notice of acceptance;
 - 7. any inspection, test or approval by others; or
 - 8. any correction of non-conforming Goods and Special Services by Buyer or Project Owner.
- E. Buyer shall promptly notify Seller of any breach of Seller's warranties or guarantees.

9.02 *Inspections and Testing*

A. *General Provisions*

1. The Procurement Contract Documents specify required inspections and tests. Buyer shall have the right to perform, or cause to be performed, reasonable inspections and require reasonable tests of the Goods at Seller's facility, and at the Point of Destination. Seller shall allow Buyer a reasonable time to perform such inspections or tests.
2. Seller shall reimburse Buyer for all expenses, except for travel, lodging, and subsistence expenses of Buyer's and Engineer's representatives, for inspections and tests specified in the Procurement Contract Documents. If as the result of any such specified testing the Goods are determined to be non-conforming, then Seller shall also bear the travel, lodging, and subsistence expenses of Buyer's and Engineer's representatives, and all expenses of re-inspection or retesting.
3. Buyer shall bear all expenses of inspections and tests that are not specified in the Procurement Contract Documents (other than any re-inspection or retesting resulting from a determination of non-conformity, as set forth in Paragraph 9.03); provided, however, that if as the result of any such non-specified inspections or testing the Goods are determined to be non-conforming, then Seller shall bear all expenses of such inspections and testing, and of any necessary re-inspection and retesting.
4. Seller shall provide Buyer timely written notice of the readiness of the Goods for all inspections, tests, or approvals which the Procurement Contract Documents specify are to be observed by Buyer prior to shipment.
5. Buyer will give Seller timely notice of all specified tests, inspections, and approvals of the Goods which are to be conducted at the Point of Destination, and a representative of Seller will attend such tests, inspections, and approvals.
6. If, on the basis of inspections or testing, the Goods appear to be conforming, Buyer will give Seller prompt notice thereof. If on the basis of inspections or testing, the Goods appear to be non-conforming, Buyer will give Seller prompt notice thereof and will advise Seller of the remedy Buyer elects under the provisions of Paragraph 9.03.
7. Neither payments made by Buyer to Seller prior to any tests or inspections, nor any tests or inspections, will constitute acceptance of non-conforming Goods, or prejudice Buyer's rights under the Procurement Contract.

B. *Visual Inspection on Delivery*

1. Buyer will visually inspect the Goods upon delivery solely for purposes of identifying the Goods, general verification of quantities, and observation of apparent condition. Such visual inspection will not be construed as final or as receipt of any Goods and Special Services that, as a result of subsequent inspections and tests, are determined to be non-conforming.
2. If, on the basis of the visual inspection specified in Paragraph 9.02.B.1, the Goods appear to comply with the requirements of the Procurement Contract Documents as to quantities and condition, then within 10 days of delivery Buyer shall issue to Seller Buyer's acknowledgment of the receipt of Goods.

C. *Final Inspection*

1. After all of the Goods have been incorporated into the Project, tested in accordance with such testing requirements as are specified, and are functioning as required, and Seller has performed and completed all Special Services, Buyer will make a final inspection.
2. If, on the basis of the final inspection, Buyer determines that the Goods and Special Services are conforming, Buyer's notice thereof will constitute Buyer's acceptance of the Goods and Special Services, subject to any limitations stated in the notice.
3. If, on the basis of the final inspection, the Goods and Special Services are non-conforming, Buyer will identify the non-conformity in writing.

9.03 *Non-Conforming Goods and Special Services*

- A. If, on the basis of inspections and testing prior to delivery, the Goods and Special Services are found to be non-conforming, or if at any time after Buyer has acknowledged receipt of delivery and before the expiration of the correction period described in Paragraph 9.04, Buyer determines that the Goods and Special Services are non-conforming, then Seller shall promptly, without cost to Buyer and in response to written instructions from Buyer, either correct such non-conforming Goods and Special Services, or, if Goods are rejected by Buyer, remove and replace the non-conforming Goods with conforming Goods, including all work required for reinstallation.
- B. *Buyer's Rejection of Non-Conforming Goods*
1. If Buyer elects to reject the Goods in whole or in part, Buyer's notice to Seller will describe in sufficient detail the non-conforming aspect of the Goods. If Goods have been delivered to Buyer, Seller shall promptly, and within the Procurement Contract Times, remove and replace the rejected Goods.
 2. Seller shall bear all costs, losses and damages attributable to the removal, replacement, reinspection, and retesting of the non-conforming Goods.
 3. Upon rejection of the Goods, Buyer retains a security interest in the Goods to the extent of any payments made and expenses incurred in their testing and inspection.
- C. *Buyer's Rejection of Non-Conforming Special Services*
1. If at any time Buyer elects to reject the Special Services in whole or in part, Buyer's notice to Seller will describe in sufficient detail the non-conforming aspect of the Special Services.
 2. Seller shall promptly provide conforming Special Services acceptable to Buyer.
 3. If Seller fails to provide conforming Special Services, Buyer may remove the Special Services from the scope of the Procurement Contract, and equitably reduce the Procurement Contract Price.
- D. *Remedying Non-Conforming Goods:* If Buyer elects to permit the Seller to modify the Goods to correct the non-conformance, then Seller shall promptly provide a schedule for such modifications and shall make the Goods conforming within a reasonable time.
- E. *Buyer's Acceptance of Non-Conforming Goods:* Instead of requiring correction or removal and replacement of non-conforming Goods discovered either before or after final payment,

Buyer may accept the non-conforming Goods. Seller shall bear all reasonable costs, losses, and damages attributable to Buyer's evaluation of and determination to accept such non-conforming Goods.

- F. *Seller Obligations*: Seller shall pay all claims, costs, losses, and damages, including but not limited to all fees and charges for re-inspection, retesting and for any engineers, architects, attorneys and other professionals, and all court or arbitration or other dispute resolution costs arising out of or relating to the non-conforming Goods and Special Services. Seller's obligations will include the costs of the correction or removal and replacement of the non-conforming Goods and the replacement of property of Buyer and others destroyed by the correction or removal and replacement of the non-conforming Goods, and obtaining conforming Special Services from others.
- G. *Buyer's Rejection of Conforming Goods*: If Buyer asserts that Goods and Special Services are non-conforming and such Goods and Special Services are determined to be conforming, or if Buyer rejects as non-conforming Goods and Special Services that are later determined to be conforming, then Seller shall be entitled to reimbursement from Buyer of costs incurred by Seller in inspecting, testing, correcting, removing, or replacing the conforming Goods and Special Services, including but not limited to fees and charges of engineers, architects, attorneys and other professionals, and all court or arbitration or other dispute resolution costs associated with the incorrect assertion of non-conformance or rejection of conforming Goods and Special Services.

9.04 *Correction Period*

- A. Seller's responsibility for correcting all non-conformities in the Goods and Special Services will extend for a period of one year after the acceptance of the Goods and Special Services in accordance with Paragraph 9.02.C.2.
- B. Where non-conforming Goods and Services (and damage to other work resulting therefrom) have been corrected or removed and replaced under this paragraph, the correction period hereunder with respect to such Goods and Services will be extended for an additional period of one year after such correction or removal and replacement has been satisfactorily completed.
- C. Seller's obligations under this paragraph are in addition to all other obligations and warranties. The provisions of this paragraph may not be construed as a substitute for, or a waiver of, the provisions of any applicable statute of limitation or repose.

ARTICLE 10—ENGINEER'S STATUS

10.01 *Engineer's Role Defined*

- A. Engineer will be Buyer's representative until assignment (if any) of the Procurement Contract.
- B. The duties and responsibilities and the limitations of authority of Engineer prior to assignment, if any, of the Procurement Contract, are set forth in the Procurement Contract Documents.
- C. Engineer's responsibilities, if any, after an assignment (if any) of the Procurement Contract, are set forth in the Procurement Agreement.

10.02 *Duties and Responsibilities; Authority; Limitations*

- A. As set forth in Article 3, Engineer will be the initial interpreter of the Procurement Contract Documents and judge of the acceptability of the Goods and Special Services, and will issue clarifications, interpretations, and decisions regarding such issues.
- B. Acting on behalf of Buyer under the provisions of Article 9, Engineer has the authority to disapprove or reject Goods and Special Services that Engineer believes to be non-conforming. Engineer also has the authority to require special inspection or testing of the Goods or Special Services as provided in Paragraph 9.02, whether or not the Goods are fabricated or installed, or the Special Services are completed.
- C. Engineer may authorize minor deviations or variations in the Procurement Contract Documents by: 1) written approval of specific variations set forth in Shop Drawings when Seller has duly noted such variations as required in Paragraph 7.06.A.3, or 2) a Field Order.
- D. As set forth in Article 12, Engineer will review Claims, and render decisions on Claims.
- E. In rendering any interpretations, clarifications, reviews, decisions, disapprovals, acceptances, rejections, authorizations, and judgments, Engineer will not show partiality to Buyer or Seller. Engineer will not be liable to Buyer, Seller, or others in connection with any interpretations, clarifications, reviews, decisions, disapprovals, acceptances, rejections, authorizations, or judgments conducted or rendered by Engineer in good faith.
- F. Engineer will not supervise, direct, control, or have authority over or be responsible for the means, methods, techniques, sequences, or procedures used by Seller to perform its obligations under this Procurement Contract, or the safety precautions and programs incident thereto, or for any failure of Seller to comply with Laws and Regulations applicable to the performance of its obligations. Engineer will not be responsible for Seller's failure to furnish the Goods and Special Services in accordance with the Procurement Contract Documents.

ARTICLE 11—CHANGES

11.01 *Amending and Supplementing the Procurement Contract*

- A. The Procurement Contract may be amended or supplemented by a Change Order, a Change Directive, or a Field Order.
- B. If an amendment or supplement to the Procurement Contract includes a change in the Procurement Contract Price or the Procurement Contract Times, such amendment or supplement must be set forth in a Change Order.
- C. All changes to the Procurement Contract that involve (1) the conformance or acceptability of the Goods and Special Services, (2) the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise), or (3) other engineering or technical matters, must be supported by Engineer's recommendation. Buyer and Seller may amend other terms and conditions of the Procurement Contract without the recommendation of the Engineer.

11.02 *Change Orders*

- A. Buyer and Seller shall execute appropriate Change Orders covering:
 - 1. Changes in Procurement Contract Price or Procurement Contract Times which are agreed to by the parties, including any undisputed sum or amount of time for Goods and Special Services furnished in accordance with a Change Directive;
 - 2. Changes in Procurement Contract Price resulting from a Buyer set-off, unless Seller has duly contested such set-off;
 - 3. Changes in the Goods and Special Services which are: (a) ordered by Buyer pursuant to Paragraph 11.05, (b) required because of Buyer's acceptance of non-conforming Goods and Services under Paragraph 9.03 or (c) agreed to by the parties, subject to the need for Engineer's recommendation if the change in the Goods and Special Services involves the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise) or other engineering or technical matters; and
 - 4. Changes that embody the substance of any final and binding results under: Paragraph 11.03.B, resolving the impact of a Change Directive; Article 12, Claims; and similar provisions.
- B. If Buyer or Seller refuses to execute a Change Order that is required to be executed under the terms of Paragraph 11.02.A, it will be deemed to be of full force and effect, as if fully executed.

11.03 *Change Directives*

- A. A Change Directive will not change the Procurement Contract Price or the Procurement Contract Times but is evidence that the parties expect that the modification ordered or documented by a Change Directive will be incorporated in a subsequently issued Change Order, following negotiations by the parties as to the Change Directive's effect, if any, on the Procurement Contract Price and Procurement Contract Times; or, if negotiations are unsuccessful, by a determination under the terms of the Procurement Contract Documents governing adjustments, expressly including Paragraph 11.08 regarding change of Procurement Contract Price.
- B. If Buyer has issued a Change Directive and Buyer or Seller believes that an adjustment in Procurement Contract Times or Procurement Contract Price is necessary, then such party shall submit a Claim seeking such an adjustment no later than 30 days after the completion of the Goods and Services set out in the Change Directive.

11.04 *Field Orders*

- A. Engineer may authorize minor changes in the Goods and Services if the changes do not involve an adjustment in the Procurement Contract Price or the Procurement Contract Times and are compatible with the design concept as indicated by the Procurement Contract Documents. Such changes will be accomplished by a Field Order and will be binding on Buyer and also on Seller, which shall perform the Goods and Special Services involved promptly.
- B. If Seller believes that a Field Order justifies an adjustment in the Procurement Contract Price or Procurement Contract Times, then before proceeding with the Goods and Special Services at issue, Seller shall submit a Claim as provided herein.

11.05 *Buyer-Authorized Changes in the Goods and Special Services*

- A. Without invalidating the Procurement Contract and without notice to any surety, Buyer may, at any time or from time to time, order additions, deletions, or revisions in the Goods and Special Services. Changes involving the design (as set forth in the Procurement Drawings, Procurement Specifications, or otherwise) or other engineering or technical matters will be supported by Engineer's recommendation.
- B. Such changes in the Goods and Special Services may be accomplished by a Change Order, if Buyer and Seller have agreed as to the effect, if any, of the changes on Procurement Contract Times or Procurement Contract Price; or by a Change Directive. Upon receipt of any such document, Seller shall promptly proceed with the Goods and Special Services involved; or, in the case of a deletion in the Goods and Special Services, promptly cease activities with respect to such deletion. Added or revised Goods and Special Services must be performed under the applicable conditions of the Procurement Contract Documents.

11.06 *Buyer's Contingency Allowance*

- A. The Buyer's Contingency Allowance, if any such is set forth in the Procurement Agreement, is for the sole use of Buyer to cover unanticipated costs.
- B. If Buyer exercises its unilateral right to use all or a portion of the Buyer's Contingency Allowance, Buyer will issue a written directive that documents the costs to which the allowance is applied, Seller's entitlement to compensation, and the consequent reduction in such allowance.
- C. Prior to final payment, the Total Price, as set forth in the Procurement Agreement, will be duly adjusted to account for any unused portion of the Buyer's Contingency Allowance.
- D. The Procurement Agreement, Article 5, addresses the impact on Buyer's Contingency Allowance of an assignment of the Procurement Contract.

11.07 *Unauthorized Changes in the Goods and Special Services*

- A. Seller shall not be entitled to an increase in the Procurement Contract Price or an extension of the Procurement Contract Times with respect to any work performed that is not required by the Procurement Contract Documents, as amended, modified, or supplemented.

11.08 *Change of Procurement Contract Price*

- A. The Procurement Contract Price may only be changed by a Change Order. Any Claim for an adjustment of Procurement Contract Price must comply with the provisions of Article 12.
- B. An adjustment in the Procurement Contract Price will be determined as follows:
 - 1. For changes in Unit Price Goods and Special Services, by application of the unit prices to the quantities of the items involved;
 - 2. To the extent the cost of the change is not covered by unit prices, then by a mutually agreed lump sum; or
 - 3. To the extent the cost of the change is not covered by unit prices and the parties do not reach mutual agreement to a lump sum, then on the basis of documented costs plus a Seller's fee for overhead and profit of 15%.

11.09 *Change of Procurement Contract Times*

- A. The Procurement Contract Times may only be changed by a Change Order. Any Claim for an adjustment in the Procurement Contract Times must comply with the provisions of Article 12.

11.10 *Notification to Surety*

- A. If the provisions of any bond require notice to be given to a surety of any change affecting the general scope of the Goods and Special Services or the provisions of the Procurement Contract (including, but not limited to, Procurement Contract Price or Procurement Contract Times), the giving of any such notice will be Seller's responsibility. The amount of each applicable bond will be adjusted to reflect the effect of any such change.

ARTICLE 12—CLAIMS, DISPUTES, AND DISPUTE RESOLUTION

12.01 *Claims*

- A. The parties agree to endeavor to avoid or resolve Claims through direct, good faith discussions and negotiations whenever practicable. Such discussions and negotiations should at the outset address whether the parties mutually agree to suspend the Claims process, including the time periods established in this Paragraph 12.01; if so, a written record of such mutual agreement should be made and jointly executed.
- B. Claimant shall deliver to Engineer and the other party to the Procurement Contract written notice of each Claim within 15 days after the occurrence of the event giving rise to the Claim.
- C. Claimant shall deliver written supporting data to Engineer and the other party within 45 days after such occurrence unless Engineer allows an additional period of time.
- D. Engineer will review each such Claim and render a decision in writing within 30 days after receipt of the last submittal of the claimant or the last submittal of the opposing party, if any.
- E. If Engineer does not render a formal written decision on a Claim within the time stated in Paragraph 12.01.D., Engineer shall be deemed to have issued a decision denying the Claim in its entirety 31 days after receipt of the last submittal of the claimant or the last submittal of the opposing party, if any.
- F. The rendering of a decision by Engineer pursuant to this Paragraph 12.01 with respect to any such Claim, dispute, or other matter (except any which have been waived by the making or acceptance of final payment) will be a condition precedent to any exercise by Buyer or Seller of such rights or remedies as either may otherwise have under the Procurement Contract Documents or by Laws or Regulations in respect of any such Claim, dispute, or other matter. If the exercise of such rights or remedies will imminently be time-barred, a party may take actions necessary to preserve such rights and remedies notwithstanding the lack of the condition precedent referred to in this paragraph.
- G. If a submitted matter in question concerns terms and conditions of the Procurement Contract Documents that do not involve (1) the performance or acceptability of Goods and Special Services under the Procurement Contract Documents, (2) the design (as set forth in the Procurement Drawings, Procurement Specifications, Addenda, or otherwise), or (3) other engineering or technical matters, then Engineer will promptly give written notice to Buyer and Seller that Engineer is unable to provide a decision or interpretation. If Buyer and Seller

are unable to agree on resolution of such a matter in question, either party may pursue resolution as provided in Paragraph 12.02.

- H. Engineer's written decision on such Claim or a decision denying the Claim in its entirety that is deemed to have been issued pursuant to Paragraph 12.01, will be final and binding upon Buyer and Seller 30 days after it is issued unless within 30 days of issuance Buyer or Seller appeals Engineer's decision by initiating the mediation of such Claim in accordance with the dispute resolution procedures set forth in Paragraph 12.02.
- I. If Article 12 has been amended to delete the mediation requirement, then Buyer or Seller may appeal Engineer's decision within 30 days of issuance by following the alternative dispute resolution process set forth in Article 12, as amended; or if no such alternative dispute resolution process has been set forth, Buyer or Seller may appeal Engineer's decision by 1) delivering to the other party within 30 days of the date of such decision a written notice of intent to submit the Claim to a court of competent jurisdiction, and 2) within 60 days after the date of such decision instituting a formal proceeding in a court of competent jurisdiction.
- J. No Claim for an adjustment in Procurement Contract Price or Procurement Contract Times will be valid if not submitted in accordance with Article 12.
- K. The effect on Claims of an assignment of the Procurement Contract by Buyer to a Contractor/Assignee is addressed in the Procurement Agreement, Article 5.

12.02 *Dispute Resolution Method*

- A. Either Buyer or Seller may initiate the mediation of (1) any Claim decided in writing by Engineer under Paragraph 12.01 before such decision becomes final and binding, or (2) any other dispute between the parties, including but not limited to any dispute arising after final inspection of the Goods and Services. The mediation will be governed by the Construction Industry Mediation Rules of the American Arbitration Association in effect as of the Effective Date of the Procurement Contract. The request for mediation must be submitted in writing to the American Arbitration Association and the other party to the Procurement Contract. Timely submission of the request will stay Engineer's decision from becoming final and binding.
- B. Mediation is a condition precedent to seeking final dispute resolution under Paragraph 12.01.C. Buyer and Seller shall participate in the mediation process in good faith. The process must be concluded within 60 days of filing of the request. The date of termination of the mediation will be determined by application of the mediation rules referenced above.
- C. If the mediation process does not result in resolution of the dispute, then Engineer's written Claim decision under Paragraph 12.01.D or a Claim denial pursuant to Paragraph 12.01.E becomes final and binding, or if applicable such other dispute is deemed resolved in favor of respondent, unless, within 30 days after termination of the mediation, Buyer or Seller:
 - 1. elects in writing to invoke any final dispute resolution process provided for in the Supplementary Conditions, or
 - 2. agrees with the other party to submit the Claim or dispute to another final dispute resolution process, or
 - 3. if no final dispute resolution process has been provided for in the Supplementary Conditions, delivers to the other party written notice of the intent to submit the Claim

or dispute to a court of competent jurisdiction, and within 60 days of the termination of the mediation institutes such formal proceeding.

ARTICLE 13—PAYMENT

13.01 *Applications for Progress Payments*

- A. Seller shall submit to Buyer for Engineer's review Applications for Payment filled out and signed by Seller and accompanied by such supporting documentation as is required by the Procurement Contract Documents and also as Buyer or Engineer may reasonably require.
- B. The timing and amounts of progress payments will be as stipulated in the Procurement Agreement.
- C. Any Application for Payment that is based in whole or in part on the delivery of Goods must be accompanied by a bill of sale, invoice, or other documentation reasonably satisfactory to Buyer warranting that Buyer has rightfully received good title to the Goods from Seller and that, upon payment, the Goods will be free and clear of all liens. Such documentation will include releases and waivers from all parties with viable lien rights.
- D. Buyer shall notify Seller promptly of any deficiency in the required documentation.

13.02 *Review of Applications for Progress Payments*

A. *Review of Applications*

- 1. Engineer will, within 10 days after receipt of each Application for Payment, including each resubmittal, either indicate in writing a recommendation of payment and present the Application to Buyer, or return the Application to Seller indicating in writing Engineer's reasons for refusing to recommend payment.
- 2. Engineer's recommendation of any payment requested in an Application for Payment will constitute a representation by Engineer to Buyer, based on Engineer's observations of Seller's progress, as an experienced and qualified design professional, and on Engineer's review of the Application for Payment and the accompanying data and schedules, that to the best of Engineer's knowledge, information and belief:
 - a. the Goods and Special Services or other obligations of Seller have progressed to the point indicated;
 - b. the quality of the Goods and Special Services or other obligations of Seller are generally in accordance with the Procurement Contract Documents; and
 - c. the conditions precedent to Seller being entitled to such payment appear to have been fulfilled in so far as it is Engineer's responsibility to observe the Seller's progress.
- 3. By recommending any such payment Engineer will not thereby be deemed to have represented that:
 - a. inspections made to check the quality or the quantity of the Goods and Special Services or other obligations of Seller have been exhaustive, extended to every aspect of the Goods and Special Services or other obligations of Seller in progress, or involved detailed inspections of the Goods and Special Services or other

- obligations of Seller beyond the responsibilities specifically assigned to Engineer in the Procurement Contract; or
- b. there may not be other matters or issues between the parties that might entitle Seller to be paid additionally by Buyer, or entitle Buyer to withhold payment to Seller.
4. Neither Engineer's review of Seller's progress for the purposes of recommending payments nor Engineer's recommendation of any payment, including final payment, will impose responsibility on Engineer:
 - a. to supervise, direct, or control the Seller's performance or furnishing of Goods and Special Services or other obligations of Seller; or
 - b. for the means, methods, techniques, sequences, or procedures of construction, manufacturing, fabrication, installation, or shipping, or the safety precautions and programs incident thereto; or
 - c. for Seller's failure to comply with Laws and Regulations applicable to Seller's performance under the Procurement Contract; or
 - d. to make any examination to ascertain how or for what purposes Seller has used the money paid for the Procurement Contract Price; or
 - e. to determine that title to any of the Goods or component parts have passed to Buyer free and clear of any Liens.
 5. Engineer may refuse to recommend the whole or any part of any payment if, in Engineer's opinion, it would be incorrect to make the representations to Buyer stated in Paragraph 13.02.A.2.
 6. Engineer will recommend reductions in payment (set-offs) necessary in Engineer's opinion to protect Buyer from loss because:
 - a. the Goods and Services are non-conforming, requiring correction or replacement;
 - b. the Procurement Contract Price has been reduced by Change Orders;
 - c. Buyer has been required to correct non-conforming Goods and Special Services in accordance with Paragraph 9.03.C, or has accepted non-conforming Goods and Special Services pursuant to Paragraph 9.03.E; or
 - d. Engineer has actual knowledge of the occurrence of any of the events that would constitute a default by Seller and therefore justify termination for cause under the Procurement Contract Documents.

13.03 *Basis and Amount of Progress Payments*

- A. The basis and amounts of the progress payments will be as provided in the Procurement Agreement, subject to the provisions of this Article 13 regarding reductions in payment.

13.04 *Suspension of or Reduction in Payment*

- A. Buyer may temporarily cease making progress payments, or reduce the amount of a progress payment, even though recommended for payment by Engineer, under the following circumstances:

1. Buyer has reasonable grounds to conclude that Seller will not furnish the Goods or the Special Services in accordance with the Procurement Contract Documents, and
 2. Buyer has requested in writing assurances from Seller that the Goods and Special Services will be delivered or furnished in accordance with the Procurement Contract Documents, and Seller has failed to provide adequate assurances within ten days of Buyer's written request.
 3. In addition to any reductions in payment (set-offs) recommended by Engineer, Buyer is entitled to impose a set-off against payment based on any of the following:
 - a. claims have been made against Buyer based on Seller's conduct in the performance or furnishing of the Goods and Special Services, or has incurred costs, losses, or damages resulting from Seller's conduct in the performance or furnishing of the Goods and Special Services, including but not limited to claims, costs, losses, or damages from workplace injuries, adjacent property damage, non-compliance with Laws and Regulations, and patent infringement;
 - b. Seller has failed to take reasonable and customary measures to avoid damage, delay, disruption, and interference with other work at or adjacent to the Point of Destination or the worksite;
 - c. Seller has failed to provide and maintain required bonds or insurance;
 - d. Buyer has incurred extra charges or engineering costs related to Submittal reviews, evaluations of proposed substitutes, tests and inspections, or return visits to manufacturing or assembly facilities;
 - e. the Goods and Special Services are non-conforming, requiring correction or replacement;
 - f. Buyer has been required to correct non-conforming Goods and Special Services, in accordance with Paragraph 9.03.C, or has accepted non-conforming Goods and Special Services pursuant to Paragraph 9.03.E;
 - g. the Procurement Contract Price has been reduced by Change Orders;
 - h. an event that would constitute a default by Seller and therefore justify a termination for cause has occurred;
 - i. liquidated or other damages have accrued as a result of Seller's failure to achieve Milestones, Substantial Completion, or final completion of the Goods and Special Services; or
 - j. liens have been filed in connection with the Procurement Contract, except where Seller has delivered a specific bond satisfactory to Buyer to secure the satisfaction and discharge of such liens.
- B. If Buyer refuses to make payment of the full amount recommended by Engineer, Buyer will provide Seller and Engineer immediate written notice stating the reason for such action and promptly pay Seller any amount remaining after deduction of the amount withheld. Buyer shall promptly pay Seller the amount withheld when Seller corrects the reason for such action to Buyer's satisfaction.

13.05 *Final Payment*

- A. After Seller has corrected all non-conformities to the reasonable satisfaction of Buyer and Engineer and furnished all Special Services, Seller may submit its final Application for Payment following the procedures for progress payments.
- B. The final Application for Payment will be accompanied by all documentation called for in the Procurement Contract Documents (including but not limited to all final operations and maintenance manuals, and any special warranties), a list of all unsettled Claims, and the written consent of surety to the making of final payment.
- C. If, on the basis of final inspection and the review of the final Application for Payment and accompanying documentation, Engineer is reasonably satisfied that Seller has furnished the Goods and Special Services in accordance with the Procurement Contract Documents, and that Seller has fulfilled all other obligations under the Procurement Contract Documents, then Engineer will, within 10 days after receipt of the final Application for Payment, indicate in writing Engineer's recommendation of final payment subject to the provisions of Paragraph 13.02, and present the final Application for Payment to Buyer. Such recommendation will account for any set-offs against payment that are necessary in Engineer's opinion to protect Buyer from loss for the reasons stated in Paragraph 13.02.
- D. If Engineer does not recommend final payment, Engineer will return the final Application for Payment to Seller, indicating the reasons for refusing to recommend final payment, in which case Seller shall make the necessary corrections and resubmit the final Application for Payment.
- E. In support of its recommendation of final payment Engineer will also give written notice to Buyer and Seller that the Goods and Special Services are acceptable, subject to stated limitations in the notice and to the provisions of Paragraph 13.06.
- F. If the final Application for Payment and accompanying documentation are appropriate as to form and substance, Buyer shall, within 30 days after receipt thereof, pay Seller the amount recommended by Engineer, less any sum Buyer is entitled to set off against Engineer's recommendation, pursuant to the provisions of Paragraph 13.04.
- G. Buyer will not make final payment, or return or release included retainage (if any) at any time, unless Seller submits written consent of the surety to such payment, return, or release.

13.06 *Waiver of Claims*

- A. By making final payment, Buyer waives its claim or right to liquidated damages or other damages for late completion by Seller, except as set forth in an outstanding Claim, appeal, set-off, or express reservation of rights by Buyer. Buyer reserves all other claims or rights after final payment.
- B. The acceptance of final payment by Seller will constitute a waiver by Seller of all claims and rights against Buyer other than those pending matters that have been duly submitted or appealed under the provisions of Article 12.

ARTICLE 14—CANCELLATION, SUSPENSION, AND TERMINATION

14.01 *Cancellation*

- A. Buyer has the right to cancel the Procurement Contract, without cause, at any time prior to delivery of the Goods by written notice. Cancellation pursuant to the terms of this paragraph will not constitute a breach of contract by Buyer. Upon cancellation:
 - 1. Buyer shall pay Seller for the direct costs incurred in producing any Goods that Seller has specially manufactured for the Project, plus a fair and reasonable amount for overhead and profit.
 - 2. For Goods that are not specially manufactured for the Project, Seller shall be entitled to a restocking charge of 10 percent of the unpaid Procurement Contract Price of such Goods.

14.02 *Suspension of Performance by Buyer*

- A. Buyer has the right to suspend performance of the Procurement Contract for up to 90 days, without cause, by written notice. Upon suspension under this paragraph, Seller shall be entitled to an increase in the Procurement Contract Times and Procurement Contract Price caused by the suspension, provided that performance would not have been suspended or delayed for causes attributable to Seller.

14.03 *Suspension of Performance by Seller*

- A. Seller may suspend the furnishing of the Goods and Special Services only under the following circumstance:
 - 1. Seller has reasonable grounds to conclude that Buyer will not perform its future payment obligations under the Procurement Contract; and
 - 2. Seller has requested in writing assurances from Buyer that future payments will be made in accordance with the Procurement Contract, and Buyer has failed to provide such assurances within ten days of Seller's written request.

14.04 *Breach and Termination*

A. *Buyer's Breach*

- 1. Seller shall have the right to terminate the Procurement Contract for cause by declaring a breach if Buyer fails to comply with any material provision of the Procurement Contract. Upon termination, Seller shall be entitled to all remedies provided by Laws and Regulations.
- 2. If Seller believes Buyer is in breach of its obligations under the Procurement Contract, Seller shall provide Buyer with reasonably prompt written notice setting forth in sufficient detail the reasons for declaring that it believes a breach has occurred. Buyer shall have 7 days from receipt of the written notice declaring the breach (or such longer period of time as Seller may grant in writing) within which to cure or to proceed diligently to cure such alleged breach.

B. *Seller's Breach*

- 1. Buyer may terminate Seller's right to perform the Procurement Contract for cause by declaring a breach should Seller fail to comply with any material provision of the

Procurement Contract Documents. Upon termination, Buyer shall be entitled to all remedies provided by Laws and Regulations.

2. In the event Buyer believes Seller is in breach of its obligations under the Procurement Contract, Buyer shall provide Seller with reasonably prompt written notice setting forth in sufficient detail the reasons for declaring that it believes a breach has occurred. Seller shall have 7 days from receipt of the written notice declaring the breach (or such longer period of time as Buyer may grant in writing) within which to cure or to proceed diligently to cure such alleged breach.
3. If and to the extent that Seller has provided a performance bond under the provisions of Paragraph 5.01, the notice and cure procedures of that bond, if any, will supersede the notice and cure procedures of Paragraph 14.04.B.2.

ARTICLE 15—MISCELLANEOUS

15.01 *Giving Notice*

- A. Whenever any provision of the Procurement Contract requires the giving of written notice to Buyer, Seller, or Engineer, it will be deemed to have been validly given if delivered:
 1. in person, by a commercial courier service or otherwise, to the recipient's place of business;
 2. by registered or certified mail, postage prepaid, to the recipient's place of business; or
 3. by e-mail to the recipient, with the words "Formal Notice" or similar in the e-mail's subject line.

15.02 *Controlling Law*

- A. This Procurement Contract is to be governed by the law of the state in which the Goods are to be installed.
- B. In the case of any conflict between the express terms of this Procurement Contract and the Uniform Commercial Code, as adopted in the state whose law governs, it is the intent of the parties that the express terms of this Procurement Contract will apply.

15.03 *Computation of Time*

- A. When any period of time is referred to in the Procurement Contract by number of days, it will be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

15.04 *Cumulative Remedies*

- A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee, or by other provisions of the Procurement Contract, and the provisions of this paragraph will be as effective as if repeated specifically in the Procurement Contract in connection with each particular duty, obligation, right, and remedy to which they apply.

15.05 *Survival of Obligations*

- A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Procurement Contract, as well as all continuing obligations indicated in the Procurement Contract, will survive final payment, completion, and acceptance of the Goods and Special Services or termination or completion of the Procurement Contract or of the services of Seller.

15.06 *Entire Agreement*

- A. Buyer and Seller agree that this Procurement Contract is the complete and final agreement between them, and supersedes all prior negotiations, representations, or agreements, either written or oral. This Procurement Contract may not be altered, modified, or amended except in writing signed by an authorized representative of both parties.

15.07 *No Waiver*

- A. A party's non-enforcement of any provision will not constitute a waiver of that provision, nor will it affect the enforceability of that provision or of the remainder of this Procurement Contract.

15.08 *Headings*

- A. Article and paragraph headings are inserted for convenience only and do not constitute parts of these General Conditions.

15.09 *Successors and Assigns*

- A. Buyer and Seller each binds itself, its partners, successors, assigns, and legal representatives to the other party hereto, its partners, successors, assigns, and legal representatives in respect to all covenants, agreements, and obligations contained in the Procurement Contract.

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 01 1100

SUMMARY OF WORK

PART 1 GENERAL

1.1 REFERENCE

- A. The requirements of Division 01 apply to the work of all other Sections.

1.2 PROJECT DESCRIPTION

- A. This project consists of the procurement of membrane softening equipment for two (2) water treatment plants in Warren County Ohio—the Richard A. Renneker WTP (RARWTP) and the Franklin Area WTP (FAWTP).
 - 1. The RARWTP membrane softening addition is designed to treat 13.7 MGD (expandable to 22.0 MGD) of groundwater. Equipment includes six (6) nanofiltration membrane softening skids and all associated controls and appurentences as identified on the drawings and the specifications.
 - 2. The FAWTP membrane softening addition is designed to treat 9.6 MGD (expandable to 15 MGD) of groundwater. Equipment includes three (3) nanofiltration membrane softening skids and all associated controls and appurentences as identified on the drawings and the specifications.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION 01 1100

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 01 3300

SUBMITTAL PROCEDURES

PART 1 GENERAL

1.1 GENERAL

- A. All submittals shall be made to the Engineer unless specifically noted otherwise or unless instructed in writing by the Owner.
- B. Submit a complete list of required submittals.
- C. Receive, check, approve as required, and submit all items listed herein by the time indicated, accompanied by a transmittal letter using the form attached at the end of this Section.
- D. Keep an accurate record of the date of submittal and the date received on the Project.
- E. Contractor shall supply all AIA forms. (One source of supply is the local AIA Chapter office.) The Engineer will supply a copy of all other forms.
- F. Following is a general list of required submittals and the time frame for submittal.
 - 1. Within 30 Days after Contract Signing
 - a. Progress schedule.
 - b. Submittal schedule.
 - 2. Prior to First Progress Payment
 - a. Progress Schedule.
 - b. Submittal Schedule.
 - c. Application and Certificate for Payment.
 - d. Schedule of Values.
 - e. Subcontractor and Material Lists.
 - 3. With Each Progress Payment.
 - a. Affidavit and Waiver of Lien (see attached form) from each Contractor and sub-contractor.
 - b. Submittal Schedule.
 - c. Schedule of Values.
 - 4. As Work Progresses
 - a. Monthly updated Progress Schedule.
 - b. Wage Rate and Payroll Certificates.
 - c. Notice of Furnishings.
 - d. Materials Certifications.
 - e. Test Reports.
 - f. Shop Drawings.
 - g. Maintenance Instructions.
 - h. Operating Instructions.
 - i. Product Data.
 - j. Samples.
 - k. Reference Submittals.
 - l. Progress Photographs.

- m. Special Guaranties and Warranties.
- n. Updated Subcontractor List.
- 5. With Request for Final Payment
 - a. As-Built Drawings.
 - b. Final Affidavits and Waivers of Lien (see attached form).
 - c. Complete package of Shop Drawings and Product Data conforming reproducibles.
 - d. Final Photographs.
 - e. Keys and Keying Schedule.
 - f. Certificate of Inspection.
 - g. Certificate of Occupancy.

1.2 PROGRESS SCHEDULES

A. Preliminary Construction Schedule

1. At fourteen calendar days following written Notice to Proceed, a Contract Milestone date has been established which is the Contractor's submittal to the Engineer for review and approval of an electronic PDF of a bar-chart schedule covering the first 45 calendar days of work to be performed, while the Detailed Construction Network is being prepared. A copy will be returned to the Owner, Field Representative, and each Contractor.
2. The Contractor shall submit to the Engineer for review and approval, with the Preliminary Construction Schedule, a detailed breakdown of the costs for all work activities identified in the schedule. The cost for each work Activity shall include mobilization, materials, labor, equipment, overhead, and profit. The Contractor will include the cost projections as part of the CPM Schedule or as a separate document that corresponds to the CPM Schedule. Cost breakdown must be consistent with the Pay Items of the base bid schedule. After review, any necessary revision, and approval, this cost breakdown will be utilized as the basis for review of progress payment estimates during the initial 45 days of the Contract prior to use of the approved Schedule of Values.
3. The Contractor shall revise the schedule and cost breakdown according to the comments received from the Engineer and submit an electronic PDF of the revised schedule and cost breakdown to the Engineer within ten calendar days after receipt. The reviewed schedule will then be considered the "Approved 45 Day Preliminary Construction Schedule."

B. Detailed Construction Network

1. The Detailed Construction Network in precedence format shall be a computer-generated and computer-drawn schedule analysis.
2. A Detailed Construction Network represents the Contractor's best judgment of how it shall prosecute and complete the work in compliance with the Contract Milestone Dates and any other Specific Dates stipulated in the Contract Documents.
3. The identity and duration of all Activities to be included in this Construction Plan. Activities shall meet the following criteria:
 - a. Activities shall be numbered, and their descriptions shall be clear and concise. Where applicable, descriptions shall include quantities of work.
 - b. Activities shall be coded with sufficient detail to allow identification of the Activity as to type of work, work responsibility, interfacing of the activity with other contracts, and any other coding necessary to accurately describe the work Activity. All Activities associated with the preparation, submittal and approval of

information required by the Engineer shall be coded so they may be readily identified.

- c. Resource requirements (manhours by craft, material, equipment, services, etc.) shall be described for each Activity, in the resources dialog box.
 - d. The quantity and cost component for each Activity shall be provided. The sum of the Activity cost components shall equal the Contract Price. If the Contract calls for pay items, the Activity shall also be coded to allow identification with its respective pay item(s). Fabrication of materials and/or equipment shall be described in a separate Activity. The cost component of any fabrication Activity shall be zero.
4. The identity of long lead items and delivery dates of all major pieces of equipment or materials.
 5. The identity of any potential problems or constraints related to the implementation of the overall construction plan.
 6. All Activities included in the Preliminary Construction Network shall be included in the Detailed Construction Network.
 7. The plot of the Detailed Construction Network shall:
 - a. Show the interdependencies of the work Activities and the major points of interface or interrelation with the activities of others, including Specific Dates for completion.
 - b. Indicate conformance with the specific interim Milestone Dates specified in the Contract Documents.
 - c. Include the description and quantity of work, by Activity.
 - d. Allow for the time required for engineering, preparation, submission, and approval of submittals (including O & M Instructions), manufacturing, delivery, and installation of Contractor-furnished permanent plant materials.
 - e. Indicate required dates of delivery of Owner-furnished material and equipment. (If applicable).
 - f. Delineate the critical Path (or Paths).
 - g. Indicate all erection and installation Activities.
 - h. Indicate all testing of equipment and materials.
 - i. Indicate startup, operational demonstration, and commissioning Activities.
 - j. Be furnished in color, with necessary legend sheets, and on electronic 22-inch x 34-inch sheets.
 8. The Detailed Construction Network shall indicate late completion date for the project that is no later than the Project's required date for final completion. All Activity durations shall be given in working days. The Network shall also indicate each of the following:
 - a. Interfaces with the work of outside entities, e.g., utilities, power, any separate contractors.
 - b. Description of Activity, including Activity numbers.
 - c. Estimated duration for each Activity.
 - d. Early start date for each Activity.
 - e. Late start date for each Activity.
 - f. Early finish date for each Activity.
 - g. Late finish date for each Activity.
 - h. Float available for each path of Activities.
 - i. Actual start date for each Activity begun.
 - j. Actual finish date for each Activity completed.

- k. The Critical Path for the project, with said path of Activities being clearly and easily recognizable on the time-scaled network diagram. The relationship between all non-critical Activities and Activities on the Critical Path shall be clearly shown on the plot of Detailed Construction Network by symbol.
 - l. The dollar value and quantity of work for each Activity, corresponding with the Schedule of Values.
 - m. The responsibility, by Contractor, Subcontractor, or Supplier, for each Activity or portion thereof.
 - n. The percentage complete for each Activity in progress or completed.
- C. The Contractor shall submit with the Detailed Construction Network, an electronic PDF a narrative description indicating anticipated allocation of the following resources and work shifts to be utilized on the project:
 - 1. Labor resources by each craft, representatives of the equipment manufacturers, and all other personnel that have been retained by the Contractor.
 - 2. Equipment resources.
 - 3. Whether work will be performed on a one, two, or three-shift basis.
 - 4. The Contractors specific understanding of the effects of seasonal weather conditions on the scheduled work, and the anticipated measures the Contractor and all sub-contractors will exercise to accommodate the known local weather conditions.
- D. It is to be expressly understood and agreed to by the Contractor that the schedule is an estimate to be revised from time-to-time as progress proceeds. The Owner does not guarantee that the Contractor can start work activities on the "early start" or "late start" dates, nor complete work activities on the "early finish" or "late finish" date as shown in the schedule, or as same may be updated or revised. The Owner or Engineer does not guarantee that Contractor can proceed at all times in the sequence established by said schedule.
- E. Within 21 calendar days following Notice to Proceed, the Contractor shall also submit an electronic PDF of its proposed Schedule of Values (using the breakdown of the computer listing of Activities) to the Engineer. The Schedule of Values shall allocate a dollar value (cost) for each Activity of the Detailed Construction Network. Each Activity cost allocation shall include labor, equipment, and material costs, including a pro rata contribution for overhead and profit. The sum of all Activity costs shall be equal to the total Contract Sum. Each Activity cost shall be coded by the Contractor, to show which subcontractor is responsible for performing the work so that subtotals for each coded activity of the work can be prepared. The Contract Pay Item for each Activity shall be indicated. The sum of costs for each Pay Item shall equal the value submitted with the Contractor's proposal.
- F. The Engineer will review the Contractor's Detailed Construction Network and Schedule of Values. The review of the Detailed Construction Network, including logic diagrams and computer generated mathematical analysis will be for compatibility with the required Project Construction and Commissioning Schedule. The review of the Schedule of Values will verify that the Schedule of Values shall, in the best judgement of the Contractor, and the Engineer, represent a fair, and equitable dollar value for each Activity on the Detailed Construction Network. The Contractor shall revise its Detailed Construction Network and Schedule of Values as required to support the Project Construction and shall resubmit them to the Engineer within ten calendar days for re-review. The Contractor's resubmittal shall include the following:
 - 1. Plot of the Detailed Construction Network (electronic PDF).

2. Computer disks of the Detailed Construction Network (1 set).
 3. Schedule of Values (electronic PDF).
 4. Computer listings/supporting data (electronic PDF).
- G. Within 10 calendar days following submission of an acceptable Detailed Construction Network and Schedule of Values, the Engineer will return an electronic PDF to the Contractor. The Contractor shall review these returned items and within five calendar days following the receipt from the Engineer signify its agreement by signing one copy of each document and returning it to the Engineer. Approval shall be signified by the Engineer also signing the copies of the documents which were signed and returned by the Contractor. The Contractor's approved Detailed Construction Network and Schedule of Values shall then be the documents which the Contractor shall use in planning, coordinating, and executing the work (including all activities of Subcontractors, equipment vendors and suppliers) and shall be the basis for evaluating the progress of the work and supporting requests for payment, subject to such revisions made in such schedule as are provided for in the Contract Documents.
- H. Approval by the Engineer of the Contractor's Detailed Construction Network is advisory only and shall not relieve the Contractor of the responsibility for accomplishing the work within each and every Contract-required Milestone and Completion date. Omissions and errors in the approved Detailed Construction Network shall not excuse performance which is not in compliance with the Contract. Approval by the Engineer in no way makes the Owner, Engineer an insurer of the Detailed Construction Network's success or liable for resultant time or cost overruns attributable to its shortcomings. The Owner hereby disclaims any obligation or liability by reason of the Owner, or Engineer's approval of or acquiescence to the Detailed Construction Network.
- I. Recovery Schedule
1. If certain activities shown on the Contractor's Detailed Construction Network fall behind schedule, to the extent that any of the mandatory specific or milestone or completion dates are in jeopardy, the Contractor shall prepare and submit to the Engineer a Supplementary Recovery Schedule, in a form and detail appropriate to the need, which explains and displays how the Contractor intends to reschedule those activities, in order to regain compliance with the Detailed Construction Network during the immediate subsequent pay period. Both the preparation of the Recovery Schedule, and all necessary acts under that Recovery Schedule required to recover compliance with the mandatory dates, shall be at no additional cost to the Owner.
 2. The Contractor shall do the following after determination of the requirement for a Recovery Schedule:
 - a. Within three calendar days, the Contractor shall prepare and complete the Recovery Schedule. The Contractor and major Subcontractors shall provide the Engineer with such information as is required to assist in review of the Recovery Schedule. The Recovery Schedule shall represent the Contractor's best judgment as to how it shall reorganize its work so that it may return to the Detailed Construction Network within the immediate subsequent pay period. The Recovery Schedule shall be prepared to a similar level of detail as the Detailed Construction Network and shall have a maximum duration of one month which shall coincide with the pay period.
 - b. Within five calendar days, the Contractor shall participate in a conference with the Engineer to review and evaluate the Recovery Schedule. Any revisions necessary as a result of this review shall be resubmitted by the Contractor for approval

within two calendar days of the conference. The approved Recovery Schedule shall then become the Schedule which the Contractor shall use in planning, coordinating, and executing the work (including all activities of subcontractors, equipment vendors, and suppliers) for its one month duration, to regain compliance with the Detailed Construction Network.

- c. Five calendar days prior to the expiration of the Recovery Schedule, the Engineer and the Contractor will meet at the job site for the monthly update and to evaluate the effectiveness of the Recovery Schedule, and shall determine whether the Contractor has regained compliance with the Detailed Construction Network. At the direction of the Engineer, one of the following will occur:
 - 1) If, in the opinion of the Engineer, the Contractor is still behind schedule, the Contractor shall prepare another Recovery Schedule, at the Contractor's expense, pursuant with this Paragraph, which will take effect during the immediate subsequent pay period. This schedule shall be prepared under the immediate review of the Engineer.
 - 2) If, in the opinion of the Engineer, the Contractor has sufficiently regained compliance with the Detailed Construction Network, the use of the Detailed Construction Network will be resumed.

J. Requested Time Adjustment Schedule

1. The updated Detailed Construction Network and accompanying reports submitted by the Contractor shall not show a completion date later than the stipulated completion date, subject to any time extensions approved by the Owner. If the Contractor believes it is entitled to an extension of the Contract Time under the provisions of the Contract Documents, the Contractor shall submit to the Engineer, with each progress payment update, a separate schedule analysis (entitled "Requested Time Adjustment Schedule") indicating suggested adjustments in the Contract Time which should, in the opinion of the Contractor, be made in accordance with the Contract Documents for time adjustments, which are due to changes, delays, or conditions occurring during the past month or previously, or which are expected or contemplated by the Contractor (whether such conditions are excusable under the Contract or are alleged to be due to Contractor or Owner fault). This separate schedule, if submitted, shall be a computer-generated and computer-drawn schedule analysis, and shall be accompanied by a formal time extension request, as required by the Contract and a detailed narrative justifying the time extension requested.
2. The time extension request shall include forecasts of the actual Project Completion Date, completion of any sequences of Activities required by the Owner, and a forecast of the resultant actual achievement of Milestones listed in the Contract.
3. To the extent any time extension requests are pending at the time of any update of the Construction Schedule, the "Requested Time Adjustment Schedule" shall also be updated to reflect any adjustments made by Contractor in the logic, sequence, or duration of any Activities, any time extensions previously granted by the Owner, and to reflect actual or expected progress, in order that the "Requested Time Adjustment Schedule" shall clearly and accurately reflect the Contractor's actual intention and proposed time adjustments.
4. Neither the Engineer or the Owner have any obligation to consider any time extension request unless the requirements of the Contract Documents are complied with. The Owner shall not be responsible or liable to the Contractor for any constructive acceleration due to failure of the Owner to grant time extensions. The Contractor's failure to perform in accordance with the approved Detailed Construction Network shall

not be excused, nor be chargeable to the Owner, simply because the Contractor has submitted time extension requests or the "Requested Time Adjustment Schedule."

- K. Each request for payment submitted to Engineer for approval shall be accompanied by the individual Contractor's Progress Schedule. The Progress Schedule shall be that schedule required above. The schedule accompanying the request for payment shall indicate actual progress compared to that anticipated on each approved Contractor's Progress Schedule. If actual performance does not meet the performance as shown on the approved schedule in total or on individual line items, revise and submit evidence as to what efforts the individual Contractor will take to meet the approved schedule. Failure to submit the Progress Schedule with each request for payment shall be cause for not processing the request for payment until receipt of schedule as required above.

1.3 PROGRESS REPORTS

- A. Each Prime Contractor shall provide the Engineer with a detailed progress report showing work completed the last month. Provide at each monthly progress meeting.

1.4 SHOP DRAWINGS, PRODUCT DATA, SAMPLES AND REFERENCE SUBMITTALS

A. Definitions

1. Shop Drawings are drawings, diagrams, schedules and other data specially prepared for the work by the Contractor or any Subcontractor to illustrate some portion of the work.
2. Product Data are illustrations, standard schedules, performance charts, instructions, brochures, diagrams, and other information furnished by the Contractor to illustrate a material, product or system for some portion of the work.
3. Samples are physical examples which illustrate materials, equipment or workmanship and establish standards by which the work will be judged.
4. Reference Submittals are any technical data or submittals listed in the technical sections of the Specifications, under Reference Submittals including but not limited to test reports, surveys, special guaranties and warranties, maintenance and operating instructions, extra stock, installers' certification, material certification, and calculations.
5. Shop Drawings, Product Data, Samples, and Reference Submittals are not to be construed as Contract Documents, they are to be used by the Contractor for his convenience only.

B. General Requirements

1. There shall be no substitutions for specified products, equipment, or systems except as allowed in Division 01 Section "Product Requirements".
2. Shop Drawings and Product Data are solely the responsibility of the Contractor, and shall be checked by him. Engineer and Owner take no responsibility whatsoever for such documents submitted for review.

C. Shop Drawings

1. Prepare project specific information, drawn accurately and to scale. Do not base shop drawings on reproductions of the contract documents or standard printed data, unless otherwise permitted.
2. Only those Shop Drawings and Product Data will be reviewed:
 - a. Where details of fabrication, installation or attachment are required to supplement the Contract Documents.
 - b. Where there are deviations from the Contract Documents for any reason. (This procedure is not for the purpose of reviewing substitutions.)
 - c. Where further documentation is required to show the proposed product or system is in conformance to every requirement of a performance Specification.
 - d. Where listed under Submittals in each technical section.
3. Shop Drawings and Product Data shall be submitted in sufficient detail to permit the Reviewer to review:
 - a. That product or system is as specified or shown.
 - b. Details of fabrication, installation or attachment.
 - c. For complete conformance to each requirement of performance Specifications, line item by line item.
4. Shop drawings shall fully illustrate all requirements in the contract documents. Include the following information, as applicable:
 - a. General arrangement of each product or assembly by necessary plans, elevations and sections.
 - b. Dimensions, finishes, part numbers, location in the building and details of fabrication and installation.
 - c. Any equipment with electric motors or wiring must show wiring diagram and schematics. Lack of either will be cause for automatic rejection of the submittal.
 - d. Identification of products.
 - e. Schedules.
 - f. Compliance with specified standards.
 - g. Notation of coordination requirements.
 - h. Notation of dimensions established by field measurement.
 - i. Relationship and attachment to adjoining construction clearly indicated.
 - j. Seal and signature of professional engineer, if specified.
5. Sheet Size: Except for templates, patters, and similar full-size drawings, submit shop drawings on electronic sheets at least 8-1/2 by 11 inches, but no larger than 22 by 34 inches.
6. Format: Submit shop drawings in PDF electronic format. At the Engineer's request, submit up to 3 hard copies.

D. Product Data

1. Product Data shall include the following information, as applicable:
 - a. Manufacturer's catalog cut sheets
 - b. Manufacturer's product specifications and details
 - c. Performance characteristics
 - d. Wiring diagrams
 - e. Test data
 - f. Installation instructions
 - g. Standard color charts
 - h. Statement of compliance with specified reference standards
 - i. Testing by recognized testing agency
 - j. Application of testing agency labels and seals

- k. Notation of coordination requirements
 - l. Availabililty and delivery time information
 2. Product Data shall be submitted with a cover letter stating exact product by name and number and how it complies with the Contract Documents.
 3. Format: Submit product data in PDF electronic format. At the Engineer's request, submit up to 3 hard copies.

E. Samples

1. Submit 3 identical sets for each material, finish and color required.
 - a. For unit materials (such as brick, floor or ceiling tile), provide standard size units in sufficient quantity to show the full range.
 - b. For finishes applied over large areas (such as wall covering, carpet, ceramic tile, plywood), provide 12-inch x 12-inch minimum size samples or larger, as required, to show full range or repeat pattern.
 - c. For linear products, such as door and window frames or trim pieces, submit 12-inch minimum lengths of the actual product.
2. Full-Size Samples: Where required, submit a full-size unit of a specified product as a sample. Such sample may be used in the finished work if:
 - a. It is approved for such use by Engineer.
 - b. It is protected and in first-class condition.
 - c. It matches the balance of the product used on the Project.

F. Reference Submittals

1. All calculations shall have the Professional Engineer's seal affixed, and shall be submitted prior to starting fabrication or installation. Engineer shall not be responsible for calculations of such other Professional Engineers. The Professional Engineer shall be registered in the State of Ohio.
2. Calculations, where required for the preparation of Shop Drawings, shall be submitted with those Shop Drawings and not as a separate submittal. Shop Drawings submitted without calculation backup sheets will be returned unreviewed.

G. Submittal Process

1. As soon as practical after executing the Contract, or as required by other Contract Documents, request from each Subcontractor and submit properly processed and identified items as required in the Specifications.
 - a. Late or untimely submittal of information shall not be cause to reduce Engineer's review time, to accept lower quality, or to delay the project completion.
2. Contractor shall be solely responsible for scheduling and coordinating of submittals among Subcontractors.
3. Allow a minimum of 14 working days for processing (from the date the Reviewer receives submittal until the date he sends it back) and sufficient time for proper handling, review, fabrication and delivery. If many items are submitted simultaneously, substantially more time for processing shall be required if Engineer so determines.
4. Send a separate Transmittal Letter with each submittal by specification number, using the form provided by the Engineer. List and identify each item on the Transmittal Letter. Include Engineer's project identification number and other requested information on the transmittal letter or on the submittal being sent.
5. When Shop Drawings are revised and resubmitted, all the revised, added and/or deleted items since the previous submittal must be circled by the submitter.

6. The entire submittal of Shop Drawings will be returned unreviewed when revised, added and/or deleted items have not been circled.
7. Shop Drawings that are submitted for reference as an aid to review another portion of the work will not be reviewed.

H. Form of Submittal

1. Shop Drawings shall be submitted in PDF electronic format. The sheet size of the electronic PDF shall generally be 22-inch x 34-inch or 11-inch x 17-inch and shall be filled completely to minimize the number of sheets.
2. Submittals for Product Data shall be submitted in PDF electronic format. The sheet size of the electronic PDF shall generally be 8-1/2-inch x 11-inch.
 - a. Provide minimum blank space of 3-inch x 8-1/2-inch on each submittal for review stamps of Contractor and Engineer.
 - b. When submitting product data, submit only catalog pages showing the item to be furnished and identify the item on the page and on a separate cover letter stating how it complies with the Contract Documents.
3. Where Samples are requested, submit three complete sets of the sizes indicated.
4. Mark each item with the same identifying number used on the Transmittal Letter and include the following information:
 - a. Project name and number
 - b. Contractor's name, address and telephone number
 - c. Subcontractor's name, address and telephone number
 - d. Supplier's name, address and telephone number
 - e. Date of submittal
 - f. Specification section number or Drawing number
 - g. Status (new or prior submittal date and number)

I. Contractor's Check

1. Upon receipt of submittals, check each item for:
 - a. Conformance to submittal requirements
 - b. Conformance of materials and details to the Contract Documents
 - c. Accuracy of all measurements
 - d. Field construction criteria related thereto
2. Reject items which do not conform to these requirements and return them to the originator with an explanation for the rejection. Do not submit rejected items to Engineer.
 - a. Do not submit Shop Drawings, Product Data, or Samples that are not requested in the Technical Sections.
3. For items approved by the Contractor, stamp each item "APPROVED" to warrant and represent approval.
4. Contractor is totally responsible for the following items which will not be reviewed by the Engineer or by Owner:
 - a. Deviations from Contract Documents.
 - b. Dimensions to be confirmed and correlated at the Site.
 - c. Fabrication process information
 - d. Means, methods, techniques, sequences, procedures of construction and construction safety.
 - e. Coordination of the work of all trades.
 - f. Reference Submittals

J. Engineer's Review

1. Deliver or send each item, shipping charges prepaid, to Engineer.
2. Engineer immediately will reject any item without further review if it is not:
 - a. Accompanied by a Transmittal Letter containing the required information
 - b. Submitted as a reproducible
 - c. Stamped "APPROVED" by the Contractor
3. If the submittal has been previously submitted and was marked "CONFORMS" or "CONFORMS AS NOTED" and the transmittal letter does not state that additional corrections or additions to the submittal have been made, then such submittal shall not be reviewed again.
4. Review will be for conformance to the design concept and compliance with information given in the Contract Documents. Engineer will make notations directly on the electronic PDF copy.
5. Review is intended to foresee unacceptable products and to minimize the possibility of their rejection at the Site. The review shall not be construed as:
 - a. Permitting a departure from the Contract Documents, unless specifically so noted.
 - b. Relieving the Contractor of responsibility for errors or omissions.
 - c. Acceptance of an assembly of which an approved item is a part.
 - d. Approval of variations from previously approved items.
 - e. Approval of dimensions.
6. Engineer will review all Samples. Such review will be for appearance only. Compliance with all other requirements of the Contract Documents is the responsibility of the Contractor.
7. Product Data: Only the cover letter will be stamped with the Shop Drawing stamp, and not the product data sheets.
8. Reference Submittals shall be sent to Engineer for informational purposes only.
 - a. Refer to Technical Sections under Reference Submittals for required information to be submitted.
 - b. The contents of such submittals and compliance with all other requirements of the Contract Documents shall be the responsibility of the Contractor.

K. Variations from Contract Documents

1. If Engineer determines a variation from the Contract Documents is in the best interest of the Owner, and it does not involve a change in the Contract price or time, he may permit such variation and stamp the item "CONFORMS".
2. Unless Engineer receives immediate written notification, he will assume the Contractor approves any variation shown.
3. If Contractor fails to mention variations from the Contract Documents, he will not be relieved of responsibility for executing the work in accordance with the Contract Documents.
4. When a variation from the Contract Documents is permitted and such variation involves corresponding adjustment in an adjacent or related item, responsibility for making and paying all costs for such adjustment rests with the Contractor requesting the original variation. Additional services required of Engineer, shall be paid for by Contractor. Payment for such additional services shall be made as follows:
 - a. Owner shall compensate Engineer for such additional services and Owner shall deduct amount of such compensation from payments due to the Contractor.

L. Reviewer's Stamp and Letter of Acknowledgement

1. Each Shop Drawing, Product Data cover letter or Sample processed by Engineer (except reference submittals).
2. If the item conforms to all requirements of the Contract Documents or if the item contains permitted variations, it will be stamped "CONFORMS".
3. If the item is marked-up by the Contractor or Engineer to make it conform and such mark-ups are not extensive, it will be stamped "CONFORMS AS NOTED".
4. If the item does not conform to the Contract Documents and the variation is not permitted, or if the item is extensively marked-up, it will be stamped "DOES NOT CONFORM".
5. Except for field test reports, receipt of Reference Submittals will be acknowledged by Letter of Acknowledgement and no stamp will be placed on such submittals. Sample attached at the end of this Section.

M. Rejection and Resubmittal

1. Items which do not meet the requirements of this Section, or are stamped "DOES NOT CONFORM", will be returned for correction and resubmittal by the same process. Engineer will indicate reasons for the rejection and will retain one print or sample to check against resubmittal.
2. Any item not prepared as required by the Contract Documents or not prepared in a professional or workmanlike manner requiring excessive review time, including items that require more than 2 submittals, shall be assessed a back charge by Owner for such extra time. Payments for such additional services shall be made as follows:
 - a. Owner shall compensate Engineer for such additional services and Owner shall deduct amount of such compensation from payments due to the Contractor.
3. Make the indicated changes only, unless further change is required for conformance to the Contract Documents.
4. Direct attention on the item to all revisions. Explain all revisions, other than those requested, in detail on the transmittal form.
 - a. All revised and/or added items since the previous submittal must be circled.
 - b. The entire submittal will be returned unreviewed when revised or added items have not been circled.
5. Contractor shall be completely responsible for changes not indicated or specifically noted as revised.

N. Acceptance and Use

1. Items stamped "CONFORMS AS IS" or "CONFORMS AS NOTED" will be returned to Contractor.
2. Distribute electronic copies as required to transmit the information to all parties involved.
3. Engineer will retain conforming Shop Drawings and Product Data as well as one sample, for comparison with work installed.
4. Keep copies of each approved item on the job Site at all times for reference.
5. Retain the original electronic submittal until Final Completion of the work and turn them over to Engineer for the Owner's file.
6. Do not commence work requiring Shop Drawings, Product Data, Samples, and Reference Submittals until submittal has been processed by Engineer. Perform all work in accordance with such submittal.
7. No work shall be performed without a required submittal having the proper Engineer stamp stating "CONFORMS" or "CONFORMS AS NOTED".

1.5 QUALITY CONTROL SUBMITTALS

A. Certificates

1. Installer Qualification is required for all installers of product systems listed as requiring such in the "Submittals" paragraphs of the technical specifications. Installer Certification shall consist of written certification from the manufacturer of the product system listed certifying that the Installer is approved by the manufacturer for installing the specified product system. Submit an electronic PDF copy of certification with the Subcontractor and Material List prior to Contract signing.
2. Material Certification is required for all materials listed as requiring such in the "Submittals" paragraphs of the technical specifications. Material Certification shall consist of written certification from the manufacturer of the material listed certifying that all such material used in the work meets the requirements specified in the Contract Documents and is being utilized in conformance with the manufacturer's recommendations. Submit electronic PDF copy of certification as work progresses.
3. Surveyor's Certification
 - a. A certification shall be a written statement certifying the correctness of the data reported and sealed by a surveyor registered in the state where the project is located. A report shall consist of reduced field notes, sketches, or dimensions marked on copies of the Construction Drawings.
 - b. Contractor shall submit certifications during the construction of the Project from a registered surveyor that the critical locations and elevations of the construction are in accordance with the Contract Documents.
 - 1) Items for certification shall include, but not be limited to, all structures, pipes, utilities, and other underground and aboveground construction, such as bottom of footings, top of footings, floor elevations, elevations of pipe centerline.
 - 2) Report all deviations from the Contract Documents both critical and those that are not critical.
 - c. Report horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent surface improvements.
 - d. Report location of internal utilities and appurtenances concealed in the construction, referenced to visible and accessible features of the structure.
 - e. Reports shall be submitted timely before and after construction. For example report and certify footing locations before and immediately after construction of the footings.

B. Manufacturer's Instructions

1. When Contract Documents require that installation of work shall comply with manufacturer's printed instructions, obtain and distribute copies of such instructions to parties involved in the installation, including a PDF electronic copy to the Engineer.
 - a. Maintain 1 set of complete instructions at the jobsite during installation and until completion.
2. Handle, install, connect, clean, condition and adjust products in strict accordance with such instructions and in conformity with specified requirements.
 - a. Should job conditions or specified requirements conflict with manufacturer's instructions, consult with the Engineer for further instructions.
 - b. Do not proceed with work without clear instructions.

3. Perform work in accordance with manufacturer's instructions. Do not omit any preparatory step or installation procedure unless specifically modified or exempted by Contract Documents.

1.6 INFORMATION REQUESTS, AND PROPOSED DEVIATIONS

- A. General: Questions which arise during construction concerning the Contract Documents and the interpretation thereof, shall be submitted in writing to Engineer for his comments. Questions that can be answered by review of the Contract Documents shall not be submitted to Engineer.
- B. Proposed Deviation
 1. Questions concerning proposed deviations from the Contract Documents to accommodate construction shall be documented and submitted to the Engineer for his review.
 - a. Such documentation shall include a proposed solution with detailed drawings and written substantiation for the proposed deviation.
 - b. This shall not be construed as a means of submitting substitutions of manufacturers, products, materials, equipment, or systems. Substitutions shall not be submitted except as permitted in Division 1 Section "Material and Equipment".
 2. Do not proceed with such deviations until written notice to proceed has been received from Engineer.
 - a. Such written notice shall not relieve Contractor from conformance to the Contract Documents.
 3. All reviews by Engineer of proposed deviations submitted by Contractor which would provide any benefit to Contractor and all reviews by Engineer of requests for deviations which are, in fact, requests for substitutions shall be paid by Contractor, even though the request may be denied, as follows:
 - a. Owner will compensate Engineer.
 - b. Owner will deduct the amount of such compensation from payments to Contractor.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION 01 3300

SECTION 01 4500

QUALITY CONTROL

PART 1 GENERAL

1.1 REFERENCE

- A. The requirements of Division 01 apply to the work of all other sections.

1.2 QUALITY ASSURANCE

- A. General: The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work. The Contract Documents are complementary, and what is required by any one shall be as binding as if required by all. Work not covered in the Contract Documents will be required if it is consistent therewith and is reasonably inferable therefrom as being necessary to produce the intended results. In case of a discrepancy between the Drawings and Specifications or among Drawings, the strongest, the larger quantity or better quality, as determined by the Interpreter shall govern. If an item is shown on the Drawings, but not specified, the Contactor shall provide the item of a quality similar to other items specified, as determined by the Interpreter. If an item is specified, but not shown on the Drawings, it shall be located as required by the Interpreter.
- B. Wind Load: Provide products designed to withstand the indicated wind load; when requested, submit substantiating data.
- C. Fire Resistance Rating: Provide materials and assemblies which have been tested and listed by UL, FM, IRI, OIA, or other recognized authority, for the assembly shown or specified; where specified, attach label of testing authority. For oversized assemblies or assemblies similar to those tested, provide Manufacturer's certification that the assembly has been constructed of materials and methods equivalent to the tested construction.
- D. Flame Spread Rating: Provide products with the indicated flame spread rating or less; when requested, submit substantiating data. Provide materials with flame spread ratings required by code, unless a more strict requirements is specified.
- E. Proprietary Products: Where systems or assemblies of materials or equipment are indicated, obtain all primary components from the same Manufacturer, unless specifically noted otherwise.

1.3 TESTING LABORATORY

- A. The Owner shall coordinate and provide all testing services, including soil testing and concrete testing, except that which may be specifically specified otherwise in the technical sections.

1.4 INSPECTION SERVICES

- A. Perform or arrange for all inspections, tests, and approvals required in each Technical Section or by governing authority.
- B. Pay all costs unless specifically stated otherwise in the Technical Sections.
- C. Notify each inspecting authority, Engineer, and Owner 24 hours in advance of each test, inspection and approval.
- D. Keep records of each test, inspection and approval. Include the time, weather conditions, name of inspecting, testing, or approving authority, results of the test, and all other pertinent data.
- E. Submit official reports showing dates performed, test methods, results, interpretations of results, and recommended actions. Submit required copies to governing authorities, Engineer, and Owner.
- F. Provide required certificates to Engineer and Owner for the Owner's file.
- G. If Engineer determines that any work requires special inspection, testing, or approval he will, upon written authorization from Owner, instruct Contractor to order such special inspection, testing, or approval. If such special inspection or testing reveals a failure of the work to comply with requirements of the Contract Documents, Contractor shall bear all costs thereof, including compensation for additional services of Engineer; otherwise, Owner shall bear such costs, and an appropriate Change Order shall be issued.

1.5 CONTRACTOR'S QUALITY CONTROL

- A. Temperature and Humidity
 1. Maintain a daily log of outdoor and indoor high/low temperatures and general weather conditions. Such log shall be readily accessible to Engineer.
 2. Provide accurate outdoor and indoor thermometers at the Site.
 3. Do not install products in or on structures in temperatures or moisture conditions outside the recommended ranges.
 4. Maintain proper ambient and material temperatures and moisture conditions as required by product Manufacturers and other standards, by use of temporary heat, ventilation, construction of temporary structures, or by other approved means.
 5. If low temperatures make it impossible to continue operations safely, in spite of cold weather precautions, cease Work and notify Engineer.
 6. Where a substrate or product is recommended to be dry or a moisture content is listed for installation procedures, conform to the requirements. If actual conditions do not meet the standards, reduce moisture in products or substrate by approved artificial methods when natural processes would delay the progress of the Work.
- B. Power Characteristics
 1. Refer to Division 26 for project power characteristics.
 2. Motors, starters, safety switches, pushbuttons, pull cords, internal wiring and operating devices, and low voltage wiring are the responsibility of each Contractor providing a product requiring electrical service.
 3. All conduit, wiring, and interlocking required to complete the installation are the

responsibility of the Electrical Contractor.

1.6 MANUFACTURER'S FIELD SERVICES

A. General

1. When indicated in the technical specifications, provide a qualified technical representative at the Site to advise on the proper installation of the product.
2. Representative shall check the installation of the equipment, supervise its initial operation and initial testing and instruct operating personnel in its operation and maintenance.
3. Representative shall supervise necessary adjustments to insure satisfactory operation.
4. Some of the technical sections require a minimum number of hours or days for the Representative to remain on the Site. This time must fall within the normal construction day. If a longer time or overtime is required it shall be provided at no increase in cost to the Owner.
5. Representative shall remain on the Site or make as many return visits as necessary to insure the equipment is operating properly.
6. If the service includes coordination, calibration, etc. with another Manufacturer's connecting equipment, the Contractor shall arrange for those Representatives involved to be on the Site at the same time.
7. Where the supervision of a Representative is not called for in the technical specifications, this shall in no way relieve the Contractor of his responsibility to properly construct or install equipment or material in accordance with the Contract Documents.
8. Contractor shall make arrangements with the Representative and notify Engineer at least five days in advance of each visit.
9. Report Form: Where a Report Form is required in the Technical Specifications, the Representative shall complete and submit a "Manufacturer's Service Representative's Report" using the form attached at the end of this Section. A separate Report shall be required for each piece of equipment and each visit. Contractor shall submit 3 copies of the signed Report Form within 5 days of the visit. Contractor shall furnish all necessary copies of the attached form.

B. Training

1. For major pieces of equipment and SCADA systems, there shall be training session(s) provided by the manufacturer or Contractor.
2. An outline shall be provided showing, as a minimum, basic function, start-up procedures, normal operating procedures, and normal maintenance.
3. The Contractor shall record video, with audio, each session. There shall be a separate DVD or other electronic video media for each piece of equipment, unless otherwise noted or approved.

1.7 CONTRACTOR DESIGN RESPONSIBILITIES

- A. The design of all pre-engineered elements, assemblies, components and connections of all types not designed by the Engineer shall be the total responsibility of the Contractor. Such shall include, but shall not be limited to, structural steel, precast concrete, wall panels, windows, architectural items, mechanical items, and electrical items. Engineering required for such for which all or a portion of the necessary engineering services are performed by the Manufacturer shall be the total responsibility of the Contractor. Where the Contract Documents require the design of architectural, structural, mechanical, or electrical items by a supplier, or where a

Contractor initiates a change in the design of a system or component thereof, such design shall be the total responsibility of the Contractor.

- B. All Contractor design responsibilities shall be performed by a Registered Professional Engineer. Submit all calculations to Engineer for his records as a Reference Submittal prior to starting fabrication or installation of the Work. Engineer shall not review, check, or approve such submittals. Engineer will not be responsible for designs of others, including those of the Contractor, Subcontractors, and suppliers.

1.8 JOB CONDITIONS

A. Existing Conditions

1. Condition of existing Structure and Site will be maintained as far as possible by the Owner up to the time the Work commences. However, variations may occur after inspection of the premises by the Bidder, due to Owner's removal and salvage operations. Owner assumes no responsibility for actual conditions at the time Work commences.
2. Execute Work in connection with the existing building, as indicated. Report any marked discrepancy between the Drawings and actual conditions at the Building to Engineer or adjustment.
3. All material removed by the Contractor unless otherwise specified, becomes his property and shall be removed from the premises promptly.

1.9 FAULTY AND NON-CONFORMING WORK

- A. Faulty work or work not in conformance with the Contract Documents shall not be permitted.
- B. Remove such work or propose a remedy by means of detailed drawings and written documentation and submit such documentation to the Engineer for his comments.
- C. All costs for removal and reconstruction of such work, and additional services of the Engineer shall be paid by the Contractor. Payments for such additional services of the Engineer shall be made as follows:
 1. Owner will compensate Engineer.
 2. Owner will deduct the amount of such compensation from payments to the Contractor.

END OF SECTION 01 4500

SECTION 01 6000

PRODUCT REQUIREMENTS

PART 1 GENERAL

1.1 REFERENCE

- A. The requirements of Division 01 apply to the work of all other sections.

1.2 FABRICATION

- A. Fabricate all items in the shop insofar as possible. Where items cannot be completely shop-fabricated and assembled for shipment, assemble and fit in shop, disassemble and ship. Identify parts for field assembly. Fabricate items to be straight, square, in proper alignment, and with hairline joints where joints are necessary. Pre-plan field joints to be as inconspicuous as possible.

1.3 SHOP PRIMING

- A. Shop prime or seal surfaces of all products to receive paint materials in accordance with requirements of the Contract Documents. Apply a primer or sealer compatible with the specified paint materials. If such primer is determined to be incompatible with the specified paint materials, provide a barrier coat or remove the primer and prime again as required.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Packing: Deliver products in properly identified original packages or other containers with unbroken seals and manufacturer's labels, grade marks and other means of identification in place.
- B. Shipping/Delivery
 1. Protect products during shipment to maintain the product's original characteristics.
 2. Deliver materials and equipment which will require controlled storage conditions on Site after the controlled storage provisions have been made on Site.
 3. Deliver materials, supplies, or equipment to Project site during working hours.
 4. Deliveries made during other than normal working hours must be received by an authorized agent of Contractor involved or be received by other means which shall be the sole responsibility of that Contractor.
 5. No employee of the Owner or Engineer is authorized to receive any shipment designated for this Project.
 6. The Owner or Engineer assumes no responsibility for receiving any shipment designated for this Project.
 7. Any materials delivered in the presence of Owner's or Engineer's representative shall be accounted for by the respective Contractor.
 8. Under no circumstances may shipments be directed to, or in care of, the Owner.
 9. Each Contractor, Subcontractor, manufacturer, or supplier furnishing materials to the site shall identify, ship, address, consign, etc. all such materials to the Contractor who may

be charged therewith by giving the name of the Contractor, the name and address of the Project.

C. Unloading and Acceptance

1. Deliver products in properly identified original packages or other containers with unbroken seals and manufacturer's labels, grade marks and other means of identification in place.
2. Check each item for completeness of order, physical condition and conformance to the Contract Documents. Reject products which do not conform to these requirements, or which have been damaged beyond repair or restoration to original condition as approved by Engineer.

D. Protection

1. Protect products during shipment and on Site to maintain the original product characteristics.
2. Protect all finished surfaces from damage during installation. Provide protective devices as required and as recommended by the manufacturer. Cover work subject to damage at the end of each day's work.
3. Coat concealed surfaces of metal products with a bituminous or other approved coating to prevent contact between dissimilar metals or other material which can cause deterioration.
4. Correct damage by repairing or replacing as required by Engineer. Repairing will be permitted only where the repair is undetectable and does not cause structural damage or interfere with proper functioning of the part.
5. Protect finish of installed products until Substantial Completion of the Project by use of wrappings, covers, or other approved protective devices. Remove such protection immediately prior to final cleaning.

E. On-Site Storage

1. Store hazardous products, such as paint materials, in well ventilated areas in accordance with applicable standards and governing laws.
2. Store materials off the ground and in a manner to prevent damage or intrusion of moisture or other foreign matter.
3. Cover materials which may be damaged by weather, allowing for proper circulation of air.
4. When possible, store materials inside the building or in sheds.
5. When storing materials in the building, stockpile materials in a manner which will not overload the structure.
6. Store all materials in a manner immediately accessible for inspection.
7. Store small items, such as finish hardware and other items easily stolen or vandalized, in a security area. Where possible, do not deliver such items until immediately prior to installation.

1.5 INSTALLATION STANDARDS

- A. Examination of Substrate: Examine the substrate or structure to which a product is to be applied or installed. Check the substrate or structure for proper clearances and tolerances. Tolerances are listed in each Section. Do not proceed until unsatisfactory conditions have been corrected. Starting the work indicates acceptance of conditions and the installer assumes full responsibility for results.

B. Preparation

1. Substrate: Where products are applied to a substrate, prepare the substrate as recommended by the product manufacturer, generally as follows:
 - a. Bring substrate to a uniform surface by smoothing uneven surfaces and filling holes, cracks and low places with recommended filler or parent material.
 - b. Remove substances, such as dust, oils and other foreign matter, not compatible with the product.
 - c. Surfaces shall be dry, unless a moisture content or wetting is specified.
2. Inserts and Anchorages
 - a. Installer shall furnish built-in fastening devices for his product to the proper trade for installation as the work proceeds.
 - b. If such devices are not furnished in time to be built in, installer shall provide alternate methods for attaching his product. Submit Drawings and other required data as Reference Submittals.
3. Templates: Provide templates, diagrams and other coordinating documents to the proper Contractor, manufacturer, or supplier of related items affecting the work.
4. Dimensions
 - a. If the exact location of an item is not indicated by dimension on the Drawings or noted in the Specifications, Engineer reserves the right to determine such location in the field prior to roughing in.
 - b. If the exact dimensions of a product are not indicated, Engineer reserves the right to determine dimensions prior to ordering or fabricating the product.
 - c. Such dimensional changes shall not be a basis for changes in the Contract Sum.
 - d. Where miscellaneous devices, such as thermostats, switches, controls, grilles, pipes, or outlets of any nature are not exactly located by the Contract Documents, request such location or obtain approval of the location prior to installation. If approval has not been obtained, Engineer may require the relocation of such devices at the expense of the installer.

C. Installation

1. Install products in accordance with the manufacturer's recommendations or the requirements of trade associations, listed standards, conforming Shop Drawings, and Contract Documents. Where a conflict exists between these references, the most strict requirements govern. If printed instructions are not available, consult with the manufacturer's field representative.
2. Provide hangers, auxiliary framing, and other means for installing ceiling suspension systems, lighting fixtures, diffusers, and other equipment in ceilings to avoid ducts, piping, etc.
 - a. Suspend from structural members, such as joists or beams, and not from ducts or piping.
3. Install work in a manner which will not interfere with the proper installation of the work of other trades and to facilitate operating, servicing, and repairing.
4. Install products straight, plumb, level, and in line. Securely attach items to the substrate, using recommended adhesives, mechanical fasteners or other devices. Where holes are provided for attachment, do not field drill or cut new holes without approval of Engineer.
5. Match all finished work to the submitted Samples or Sample panels.
6. Conceal fasteners wherever possible, unless exposed fasteners are permitted or specified.
7. Weld in accordance with AWS standards for qualifications of operators and for workmanship.

1.6 PRODUCT OPTIONS AND SUBSTITUTIONS

- A. Refer to Instructions to Bidders for requirements and approval process of substitute materials, products, and systems.
- B. Manufacturers, Products, Materials, Equipment and Systems
 - 1. General: Where more than one manufacturer, product, material, equipment item, or system is indicated as acceptable, provide any one named. No substitutions will be permitted after signing the Contract.
 - 2. Contractor's Option
 - a. In many instances this Project has been designed around a specific manufacturer with other manufacturers listed as acceptable.
 - 1) Products from such other listed manufacturers will be accepted contingent upon meeting the design, appearance and functional standards established by the specified items.
 - b. If any changes to the Contract Documents or work are required to accommodate an acceptable product of one such other listed manufacturer, the Contractor whose product requires such changes shall pay all additional costs involved with no additional cost to the Owner or Engineer. Such additional costs to be paid by such Contractor shall include, but not be limited to, all additional costs required for changes in the work of such Contractor and of all other Contractors as well as all costs for additional services of the Reviewer to review such changes.
 - c. Payments for such additional services of the Reviewer shall be made as follows:
 - 1) Owner will compensate Engineer.
 - 2) Owner will deduct the amount of such compensation from payments to the Contractor.
 - 3. Unavailability of Product: When all of the products listed in the Contract Documents for a specified item are no longer being manufactured, or when products are not listed and all of the conforming products of manufacturers listed in the Contract Documents for a specified item are no longer being manufactured, then submit, through the Change Order process, the name of another product and manufacturer for review and approval by the Reviewer. Submit all documentation required elsewhere in the Contract Documents and as required by the Reviewer to show proof that the submittal is an equal in every respect to the item specified.
 - 4. Performance Specification: Where a performance is specified and no manufacturer is listed, submit through the Shop Drawing procedure the name of the manufacturer, the product proposed, and detailed information showing its characteristics.
 - 5. Color, Pattern, Texture: Where a choice of color, pattern, or texture is available for a specified product or item of equipment, the Reviewer will make a selection from the manufacturer's highest or best standards, unless noted otherwise in the technical sections of the Project Manual.

END OF SECTION 01 6000

SECTION 01 7823

OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 REFERENCES

- A. The requirements of Division 01 apply to the work of all other Sections.

1.2 GENERAL

- A. Submittal of operation and maintenance data shall be made to the Engineer on specified product items as outlined herein.

1.3 OPERATION AND MAINTENANCE MANUALS

- A. Required where specified in technical sections.
- B. Submit written instructions for operating each piece of equipment and for maintaining equipment. At the time of inspection for substantial completion, Engineer will notify Contractor of any revisions, corrections or incomplete data required for the satisfactory completion of the Operation and Maintenance Data Reference Manual. Engineer will not recommend final acceptance of the work until the Operation and Maintenance Data Reference Manual is complete and satisfactory to him.
- C. Submit Operations and Maintenance Manuals when the equipment is delivered to the Job Site. Failure to deliver manuals may be cause to withhold payment for equipment.
- D. The Operation and Maintenance Data Reference Manual shall contain, but is not limited to, the following information on all equipment and accessories furnished and installed under these Specifications:
 1. Equipment function, normal operating characteristics and limiting conditions for all equipment furnished.
 2. Detailed assembly, installation, alignment, adjustment and checking instructions for all equipment furnished.
 3. Detailed operating instructions for start-up, calibration, routine and normal operations, regulation and control, shutdown and emergency conditions for all equipment furnished.
 4. Detailed lubrication instructions and schedules for all equipment furnished including identification of lubricant (description, specification and trade name of at least two manufacturers), and diagrams illustrating lubrication points.
 5. Detailed guide to "troubleshooting" for all equipment furnished.
 6. Detailed parts lists identified by generic title, materials of construction and part number (actual manufacturer's number, not supplier's), list of recommended spare parts identified as specified above, predicted life of parts subject to wear and an exploded view of each equipment assembly for all equipment furnished.
 7. Electrical and instrumentation schematics for all equipment furnished including motor control centers, control panels, instrument panels and analyzer panels.
 8. List of all special tools required and description of their use for all equipment furnished. Special tools include any tool not normally available in an industrial hardware store.

9. Detailed preventive maintenance procedures and schedules for all equipment furnished.
 10. Detailed list of settings for relays, pressure switches, temperature switches, level switches, thermostats, alarms, relieve valves, rupture discs, etc.
 11. List of names and addresses of nearest service centers for parts, overhaul service.
 12. One copy of any instructions and parts lists attached to equipment when delivered.
 13. Procedures for storing, handling and disposing of any chemicals or products used with the equipment or system.
- E. Assembly of Operation and Maintenance Data Reference Manual
1. Submit 1 preliminary copy of each manual in electronic PDF format to Engineer prior to date of shipment of the equipment
 2. Three (3) final copies of each O&M manual shall be submitted, directly to the Owner, using loose-leaf binders. Binders shall be three-ring, hardback type, with a transparent vinyl pocket on the spine for label.
 3. Each copy of the data reference manual shall be assembled in one or more loose-leaf binders, each with title page, typed table of contents, typed list of tables, typed list of figures and heavy section dividers with copper or mylar reinforced holes and numbered plastic index tabs. All data shall be punched for binding and composition and printing shall be arranged so that punching does not obliterate any data. The binding edge of each manual shall have the project number and title, specification division number and title and manual title printed thereon, all as approved by the Engineer.
 4. List for each product, the name, address, and telephone number of the Subcontractor, Maintenance Contractor and source of supply.
 5. Products not installed shall be removed from the Manual.
 6. Provide manufacturer's recommended cleaning materials and methods.
 7. All copies of Shop Drawings, figures and diagrams shall be reduced to either 8 1/2 by 11 inches or to 11 inches in the vertical dimension and as near as practicable to 17 inches in the horizontal dimensions. Fold such sheets to 8 1/2 by 11 inches. Print the manual and other data on first quality paper, 8 1/2 by 11 inch size with standard three-hole punching. Reduce drawings and diagrams to 8 1/2 by 11 inches or 11 by 17 inches. Label binders Vol. 1, Vol. 2, etc., where more than one is required. The table of contents for the entire set, identified by volume number, shall appear in each binder. Text, figures and drawings shall be clearly legible and suitable for dry process reproductions.
- F. Electronic Format
1. The Contractor shall provide a USB drive(s) containing all the elements of each approved O&M Manual.
 2. The contents of the electronic format shall be the same as the approved O&M Manual.
 3. All text based documentation (i.e., specs, O&M, MSDS sheets, data sheets, etc.) shall be delivered on the USB drive in PDF format.
 4. All pictures, graphs, or anything that is not a drawing shall be delivered on the USB drive in either a TIFF, JPEG, or GIF format.
 5. All CAD drawings shall be delivered on the USB in AutoCAD 2016 or higher format.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 01 7823

SECTION 26 0505

BASIC ELECTRICAL REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to implement the following general administrative and procedural requirements in accordance with the plans and as specified herein.
- B. Extent of Work: Work under this contract consists of furnishing, installing, testing, placing into operation, and guaranteeing complete electrical systems, as shown on the drawings and as specified in Division 26. The Contractor shall connect and place all wired equipment in proper working order. Refer to the plans and specifications for work included in this Contract. Some general guidelines to coordinating work between Division 26 and other Divisions are as follows:
 - 1. Division 26 includes all power wiring and raceways for equipment furnished under other Divisions. Motor starters and disconnect switches for Division 23 equipment shall be provided under Division 26 unless otherwise noted. Remote two-wire control logic will be extended to the motor starters as work of Division 23. Where combined line voltage power/control is used for Division 23 equipment, the wiring and raceways are treated as power wiring and are work of Division 26.
 - 2. Division 26 is responsible for providing appropriate wire and conduit between all distribution equipment and all electrical devices and utilization equipment shown on plans. It is also the responsibility of Division 26 to provide all wire, conduit, and devices necessary to accomplish all control functions as indicated by the control diagrams which are not specifically shown as work of another division.
 - 3. Division 26 provides all power wiring and raceways for plant equipment provided under Division 40. Division 26 provides all control, signal, and communication wiring and conduit for the instrumentation and control equipment provided under Division 40

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Perform all work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
 - 1. All work shall be installed in full accordance with the latest edition of the National Electrical Code (NEC) as prepared and published by the National Fire Protection Association (NFPA) and any applicable local or state codes. All electrical equipment shall be listed and labeled by Underwriters' Laboratories, Inc. (UL) or any approved independent nationally recognized electrical testing laboratory where such standards exist. Optionally, in lieu of such listing and labeling, equipment pre-approved by the Electrical Inspector may be supplied. Wherever UL compliance is mentioned in the

specifications, the above alternatives shall be understood to apply to all listing and labeling requirements. This does not preempt or replace the specifications or replace the approval process. All service switches/circuit breakers shall be listed and labeled as outlined above for service entrance duty.

2. Comply with the requirements of NFPA Code 241 "Building Construction and Demolition Operations," the American National Standards Institute (ANSI) A10 Series standards for "Safety Requirements for Construction and Demolition," and the National Electrical Contractors Association (NECA) National Joint Guideline NJG-6 "Temporary Job Utilities and Services."
3. In addition to the requirements outlined under other sections of the Contract Documents, all Work, material, and equipment shall comply with all requirements of the latest editions and interim amendments of the National Electrical Safety Code, National Fire Protection Association, OSHA, the building Owner's insurance company, and all applicable federal, state, and local laws and ordinances. All materials shall be listed and labeled by UL and installed as required by the listing.
4. Should any changes in the Drawings or the Project Manual be required to conform to the above regulations, the Contractor shall notify the Engineer at the time of submitting his bid. After entering into the Owner-Contractor Agreement, the Contractor shall be held to complete all Work necessary to meet these requirements without additional expense to the Owner.

B. Permits and Regulations

1. The Contractor shall obtain all permits and inspections required by laws, ordinances, rules, regulations, and public authority having jurisdiction and shall obtain certificates of such inspections and shall submit same to the Engineer and shall pay all fees, charges, and expenses in connection therewith. The Contractor shall furnish to the Owner a certificate of final inspection from the proper authority prior to final payment. Obtain and pay for easements required to bring temporary utilities to the site, where the Owner's easement cannot be utilized for that purpose.
2. The Contractor shall not allow or cause any of the Work to be covered up or enclosed until the Engineer or Owner has been notified and given reasonable opportunity (2 working days) to review the Work. When required by law or regulations, the governmental agency having jurisdiction for inspections shall be given reasonable notice and opportunity to inspect the Work. Any Work that is enclosed or covered up before such inspection and test shall be uncovered at the Contractor's expense; after it has been inspected, the Contractor shall restore the Work to its original condition at his own expense.

C. Interpretation of Drawings and Project Manual

1. Any discrepancies among Drawings, Project Manual, Drawings and Project Manual, or between Drawings and Project Manual shall be promptly brought to the attention of the Engineer for clarification during the bidding period. No allowance shall subsequently be made to the Contractor by reason of his failure to have brought said discrepancies to the attention of the Engineer during the bidding period or of any error on the Contractor's part.
2. The locations of switch, receptacle, light, motor, etc., outlets shown on Drawings are approximate. The Contractor shall use good judgment in placing the preceding to eliminate all interference with ducts, piping, etc. Where any doubt exists, the exact location shall be determined by the Engineer.

3. Check all door swings so that light switches are not located behind doors. Relocate switches as required, with Engineer's review.
4. All general trades and mechanical Drawings shall be checked by the Contractor before installing any outlets, power wiring, etc.
5. Equipment sizes and locations shown on the Drawings are estimated. Before installing any wire or conduit, the Contractor shall obtain the exact equipment requirements, including wire and conduit entrance locations, and install wire, conduit, disconnect switches, motor starters, overload heaters, circuit breakers, or other items of the correct size and locations for the equipment actually installed. However, wire and conduit sizes shown on the Drawings shall be taken as a minimum and shall not be reduced without written approval from the Engineer.
6. The Contractor shall provide all wiring, including disconnect switches and starters for all electrically operated equipment shown on Drawings, specified or required, except that starters and/or disconnect switches need not be furnished where it is specifically noted that they are furnished with the equipment.
7. The Drawings show the general arrangement required for installation of equipment and materials. The Contractor shall follow these Drawings as closely as possible. Should conditions necessitate other arrangements, the Contractor shall prepare and submit drawings showing the changes to the Engineer for review before proceeding with the Work.
8. The Engineer reserves the right to make minor changes in the location of the installation of equipment and materials up to the time of roughing in at no extra cost to the Owner.
9. The Drawings do not show all offsets and do not detail every point at which unusual conditions of construction may require special attention. All additional fittings, conduits or specialties and other appurtenances necessary due to field conditions shall be provided by the Contractor.
10. In all cases where a device or part of the equipment is herein referred to in the singular, it is intended that such reference shall apply to as many such devices as are required to complete the installations.
11. Wherever in this Division 26 a Manufacturer is specified with the notation "or approved equal," the decision as to the material or equipment being "equal" shall be made by the Engineer, without exception, and this decision shall be accepted by the Contractor as final. Where the Contractor proposes to furnish equipment or material in accordance with the "or approved equal" notation, said equipment or materials shall be submitted to the Engineer for review in accordance with the requirements set forth in the "Substitutions" paragraph of the "Submittals" paragraph of this Section.

1.4 SUBMITTALS

- A. Transmittal: Furnish manufacturer's product data, test reports, and materials certifications as required.
 1. Follow the procedures specified in Division 01 Section "Submittal Procedures" and in addition, the Contractor shall prepare and submit a complete submittal list to the Engineer. The submittal list shall include all submittal items covered in the Division 26 specification sections. In addition, the submittal list shall contain dates for all items to be submitted and shall accompany the first submittal. The submittal list shall be coordinated with the construction schedule and shall clearly show such coordination.
 2. Shop Drawings: Shop drawings shall be submitted to the Engineer for approval. Shop drawings shall identify the specific equipment and material being supplied, and all accessories, dimensions, descriptions, mounting and connection details, wiring diagrams,

elementary control diagrams, equipment interface diagrams, and any other information necessary to determine compliance with the plans and specifications. Fabrication and installation shall be in accordance with the approved shop drawings.

3. Permits and Easements: Submit copies of reports, permits, and easements necessary for installation, use, and operation.
4. Test Reports: Submit copies of reports of tests, inspections, and meter readings as specified. Tests, inspections, and meter readings shall be performed using the Contractor's temporary power source unless otherwise specified.

B. Additional copies may be required by individual sections of these specifications.

C. Coordination Drawings

1. Prepare coordination drawings in accordance with Division 01 section "Project Coordination; Bid Package Contracts" to a scale of 1/4 inch = 1 foot-0 inches or larger, detailing major elements, components, and systems of electrical equipment and materials in relationship with other systems, installations, and building components. Indicate locations where space is limited for installation and access and where sequencing and coordination of installations are of importance to the efficient flow of the work, including (but not necessarily limited to) the following:
 - a. Submit conduit layout drawings showing all conduit sizes, the number and size of each conductor installed in each conduit, and the intended use for each conduit. Drawings should clearly delineate method of conduit installation and should include details of any special conduit support or mounting method. All wiring devices, lighting fixtures, and equipment supplying or requiring electrical power shall be located on the layout drawings. In addition, include the following:
 - 1) Clearances for servicing equipment, including space for equipment disassembly required for periodic maintenance.
 - 2) Exterior wall and foundation penetrations.
 - 3) Fire-rated wall and floor penetrations.
 - 4) Equipment connections and support details. Demonstrate evidence of dimensional coordination.
 - 5) Sizes and location of required concrete pads and bases.
 - b. Prepare and submit point-to-point interconnection wiring diagrams. The diagrams shall identify all external interconnecting wiring associated with all new and modified existing equipment. The diagrams shall be developed for performance of the Work and to document terminations.
 - 1) The point-to-point interconnection wiring diagrams shall include:
 - a) Wiring and conduit numbers
 - b) Terminal strip numbers for each wire termination
 - c) Color coding
 - d) Raceway and boxes in which wiring is to be located
 - e) Location and functional name of items to which wiring is connected.
 - 2) Use information obtained from approved submittals, record drawings, and field inspections as necessary to complete the diagrams.
 - c. Indicate scheduling, sequencing, movement, and positioning of large equipment into the building during construction.
 - d. Prepare floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations.

- e. Prepare reflected ceiling plans to coordinate and integrate installations, air outlets and inlets, light fixtures, communications systems components, sprinklers, and other ceiling-mounted devices.
- D. Record Documents: Prepare record documents in accordance with the requirements in Division 01 Section "Closeout Procedures". In addition to the requirements specified in Division 1, indicate installed conditions for:
- 1. Raceway systems, size, contents, and location, for both exterior and interior; locations of control devices; distribution and branch electrical circuitry; and fuse and circuit breaker size and arrangements.
 - 2. Equipment locations (exposed and concealed), dimensioned from prominent building lines.
 - 3. Approved substitutions, Contract Modifications, and actual equipment and materials installed.
- E. Operations and Maintenance Manuals
- 1. Prepare maintenance manuals in accordance with Division 01 Section "Closeout Procedures". Compile and assemble the operation and maintenance data of equipment specified in Division 26 into a separate set of vinyl-covered three-ring binders, tabulated and indexed for easy reference. Data shall clearly indicate all options and accessories.
 - 2. In addition to the requirements specified in Division 1, include the following information for equipment items:
 - a. Manual index.
 - b. Manufacturers' descriptive literature.
 - c. Final signed submittal copy of shop drawings.
 - d. As-built drawings.
 - e. Spare parts and replacement parts lists.
 - f. Manufacturers' maintenance and service manuals.
 - g. Project-specific description of operation.
 - h. Wiring diagrams.
 - i. Manufacturers' guarantee and warranty.
 - j. Test results.
 - k. Motor list, including motor description, motor horsepower, motor voltage, fuse size, fuse type, and overload size.
 - l. Fuse list including fuse location, fuse size, fuse type, and load description.
 - m. Fixture ballast schedule.
 - n. Lamp schedule.
 - 3. Materials for more than one item shall clearly indicate which item or items are included on the Project.
 - 4. Shop Drawings which are folded and punched for insertion in the Manual shall be such that the Drawings can be unfolded without removing them from the Manual, and all information shall be legible.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products to the project identified with names, model numbers, types, grades, compliance labels, and other information needed for identification.

1.6 SPECIAL WARRANTY

- A. Compile and assemble the warranties specified in Division 26 into a separate set of vinyl-covered three-ring binders, tabulated and indexed for easy reference.
- B. Provide complete warranty information for each item. Information to include:
 - 1. Product or equipment list.
 - 2. Date of beginning of warranty or bond.
 - 3. Duration of warranty or bond.
 - 4. Names, addresses, and telephone numbers and procedures for filing a claim and obtaining warranty services.

1.7 DEFINITIONS

- A. Finished locations. The following are defined as finished locations:
 - 1. Areas with carpet or tile floors.
 - 2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
 - 3. Areas with tiled, plastered, or paneled walls.
- B. Interior locations. The following are defined as interior locations:
 - 1. Any location within the boundaries of the foundation of any building.
 - 2. Any location within the superstructure of other structures not classified as buildings.
- C. Wet locations. The following are defined as wet locations:
 - 1. All exterior locations.
 - 2. All interior locations below grade.
 - 3. All interior locations where wet materials are processed, pumped, transported, or stored.
- D. Corrosive locations. The following are defined as corrosive locations.
 - 1. All locations with chemical feed/transfer equipment
 - 2. All locations with chemical storage tanks
 - 3. All locations where chemical storage drums are located.
- E. Hazardous (classified) locations. The following are defined as hazardous (classified) locations.
 - 1. All hazardous (classified) locations and their hazard classification are shown.

1.8 FAULT CURRENT, COORDINATION, AND SELECTIVITY STUDY

- A. The Contractor shall provide to the Engineer three copies of a written, detailed, documented selective power distribution system report showing fault currents available using log-log graphical representation. The report shall be stamped by a professional Electrical engineer registered in Ohio. The report shall be based upon data compiled by the Contractor from the actual equipment installed. The report must be submitted and approved prior to project closeout. At a minimum, the report shall contain the following:
 - 1. Overall system description and diagrams.
 - 2. System selectivity under fault and other overload conditions.
 - 3. Ground fault system operation and selectivity.
 - 4. Tabularized ratings and settings of protection devices verified by electrical testing to ensure coordination and selectivity. They shall include all:
 - a. Momentary and interrupting ratings.
 - b. Relays and shunt trip devices.
 - c. Fuses.

- d. Circuit breakers.
- 5. Conclusions and recommendations.

- B. Calculated fault currents shall be provided at the secondary of each transformer, at each piece of service equipment, between service equipment and each motor control center, switchboard or switchgear and for at least one feeder/branch circuit for each motor control center, switchboard, or switchgear. They shall include:
 - 1. Equipment and conductor damage curves.
 - 2. Pick-up and time current characteristics.
 - 3. Short circuit data.
 - 4. Detailed description of test procedures.
 - 5. Design calculations.

1.9 SCHEDULING

- A. General: It is mandatory that the facility be maintained in operation during construction and that periods of shut-down due to "line changeovers, etc. are held to a minimum. These outages must be scheduled with and have the concurrence of the Engineer and the Owner. Further, it is mandatory that the completion of various stages of the electrical work coincide with the other phases of construction to maintain and permit operation of new installations as construction progresses.

1.10 COORDINATION WITH WORK OF OTHER TRADE CONTRACTORS

- A. General
 - 1. Coordinate all requirements of the Work of this Division with other Trade Contractors. Such requirements include, but are not limited to, locations, sizes, anchors, and similar items.
 - 2. Provide all necessary information to other Trade Contractors for such coordination. Such information shall include conforming Shop Drawings, conforming Product Data, and all other required data.
 - 3. This Contractor shall bear all costs for providing affected Work of related Trade Contractor(s) with no change to the Contract Sum or Date of Substantial Completion.
- B. Foundations, Bases, Curbs, and Supports
 - 1. Provide and coordinate all requirements for foundations, bases, curbs, and supports with the related Trade Contractor(s).
 - 2. Provide required dimensions, templates, and all required information on anchors, sleeves, and cast-in-place accessories, including dimensions, to the related Trade Contractor(s).
- C. Openings, Recesses, and Chases: Coordinate all requirements and locations for openings, recesses, and chases with the related Trade Contractor(s).
- D. Final Connections: Coordinate with the related Trade Contractor(s) all requirements for roughing-in and final connections for equipment installed under this Division.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 INSTALLATION

A. Rough-In

1. Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment to be connected.
2. Refer to equipment specifications in Divisions 02 through 40 for rough-in requirements.

B. Electrical Installations: Sequence, coordinate, and integrate the various elements of electrical systems, materials, and equipment. Comply with the following requirements:

1. Coordinate electrical systems, equipment, and materials installation with other building components.
2. Verify all dimensions by taking field measurements.
3. Coordinate and provide chases, slots, and openings in other building components during progress of construction, to allow for electrical installations.
4. Coordinate the installation of required supporting devices and sleeves to be set in poured-in-place concrete or supported from or on other structural components, as they are constructed.
5. Sequence, coordinate, and integrate installations of electrical materials and equipment for efficient flow of the work. Give particular attention to large equipment requiring positioning prior to closing in the building and equipment which must be placed in service before further construction can take place.
6. Where mounting heights are not detailed or dimensioned, install systems, materials, and equipment to provide the maximum headroom possible.
7. Coordinate connection of electrical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies. Provide required connection for each service and place each in proper operating order.
8. Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings, to greatest extent possible. Conform to arrangements indicated by the Contract Documents, recognizing that the work is shown only in diagrammatic form. Where coordination requirements conflict with individual system requirements, refer conflict to the Engineer before final placement.
9. Install systems, materials, and equipment level and plumb, parallel and perpendicular to other building systems and components, where installed exposed in finished spaces.
10. Install electrical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations.
11. Install systems, materials, and equipment giving right-of-way priority to systems required to be installed at a specified slope.
12. Wiring for equipment furnished by other Contractors shall be provided as specified under the Electrical Contract based on the equipment rating and motor horsepower as specified in the Contract Documents. If the equipment provided by the General, and Mechanical Contractors has different rating or horsepower, the General and Mechanical Contractors shall provide for any necessary electrical changes to accommodate the equipment furnished at no change in contract price. This Contractor shall verify actual equipment nameplate electrical ratings (voltage, horsepower, amps, etc.) match the specified electrical system being supplied to the equipment. Any discrepancies shall be brought to the attention of the Engineer prior to equipment being connected.

3.2 LOAD BALANCING

- A. It shall be the responsibility of the Contractor to balance the loads on the service system, all distribution systems, and all power equipment, so that the variation in amperes per phase readings shall not exceed 5% under normal operating conditions.
- B. Special care shall be taken during load balancing to prevent reverse rotation of motors.
- C. If, during load balancing, a load is shifted from one phase to another in a color-coded system, the Contractor shall paint or tape the ends of the wire at all outlet points with the proper color code for that phase. Failure to do so shall constitute justifiable grounds to require the Contractor to replace the entire circuit with the proper coded wire at no expense to the Owner or Engineer.

3.3 CUTTING AND PATCHING

- A. General: Perform cutting and patching in accordance with the following requirements:
 - 1. Perform cutting, fitting, and patching of electrical equipment and materials required to:
 - a. Uncover work to provide for installation of ill timed work.
 - b. Remove and replace defective work.
 - c. Remove and replace work not conforming to requirements of the Contract Documents.
 - d. Remove samples of installed work as specified for testing.
 - e. Install equipment and materials in existing structures.
 - f. Upon written instructions from the Engineer, uncover and restore work to provide for the Engineer observation of concealed work.
 - 2. Cut, remove, and legally dispose of selected electrical equipment, components, and materials as indicated, including, but not limited to, removal of electrical items indicated to be removed and items made obsolete by the new work. Existing electrical items not indicated to be reused are to be removed.
 - 3. Protect the structure, furnishings, finishes, and adjacent materials not indicated or scheduled to be removed.
 - 4. Provide and maintain temporary partitions or dust barriers adequate to prevent the spread of dust and dirt to adjacent areas.
 - 5. Protection of Installed work. During cutting and patching operations, protect adjacent installations.
 - 6. Patch finished surfaces and building components using new materials specified for the original installation and experienced Installers. Installers' qualifications refer to the materials and methods required for the surface and building components being patched.
 - a. Refer to Division 1 section "References" for definition of experienced "Installer."
 - 7. The Contractor shall install his work in such a manner and at such times as shall require a minimum of cutting and patching of the building structure.
 - 8. Certain areas require this Contractor to remove, add to, or relocate portions of existing Work. It shall be this Contractor's responsibility to remove ceilings, portions of walls, etc., in a manner so that he may install new Work. This Contractor shall then patch, repair and/or replace ceilings, walls etc., to match existing conditions. The above applies to all areas not specifically indicated on Architectural Drawings as Work to be performed by General Trades Contractor(s).
 - 9. If the Contractor fails to do any required patching or repair any damage resulting from the installation of the electrical Work, such patching or repairing shall be done by the Owner and the cost shall be paid by the Contractor.

3.4 ELECTRICAL DEMOLITION

A. General

1. In general, the notation to remove a piece of equipment as indicated on the Drawings shall be interpreted to also include the removal of all electrical equipment, conduit, wires and appurtenances associated with the equipment. This includes, but is not limited to: all wires and conduit from the motor control center starter to the equipment; and all disconnects, remote switches and starters; all controls, alarms, conduit and instrumentation, both local and remote, and all supports, braces and hangers.
2. Electrical removals also consist of the removal of existing transformers, distribution switchboards, control panels, motors, conduits and wires, poles and overhead wiring, panel boards, lighting fixtures, and miscellaneous electrical equipment all as shown, specified, or required to perform the Work.
3. All removals of electrical equipment and appurtenances shall be in complete conformance with the requirements of Division 26.
4. It is the Contractor's responsibility as part of this work to maintain all existing electrical systems including power, lighting, intercommunication and instrumentation in continuous, acceptable operation. It is possible that during the period of construction some wiring may be cut or damaged either accidentally or otherwise. The Contractor shall install and maintain any and all temporary wiring (as approved by the Owner) required to keep all electrical apparatus in acceptable operating condition.
5. As soon as possible, the Contractor shall reinstall cut or damaged circuits in their permanent locations.
6. Where any electrical system component is damaged during work on this project and replaced in accordance with this section, the replaced work shall meet all requirements specified in Division 26 even though the damaged components may not have met the requirements of Division 26 prior to being damaged.
7. Where existing electrically operated equipment is relocated, the power and control wiring and appurtenant devices shall be relocated to accommodate same. Installations and materials shall conform to requirements specified in Division 26.
8. Electrical equipment, conduit, wire, and fixtures shall be relocated as necessary to accommodate installation of new and relocated electrically operated equipment and to accommodate structural alterations to existing facilities such as floors, walls, entrance ways, ducting, process equipment, and piping.
9. All equipment and major lengths of wiring retired and removed shall remain the property of the Owner unless shown or directed otherwise and shall be placed in storage on the site by the Contractor where ordered.
10. Existing Conduit Location
 - a. In existing structures at this project, there is electrical conduit embedded in concrete. It shall be the responsibility of the Contractor, under this section, to attempt to locate and mark the existence of any conduit embedded in areas where, as part of this Contract, the concrete is to be drilled or cut into for any purpose.
 - b. Contractor shall use every available means possible to attempt to locate existing conduit. Whenever a hole is to be cut into an existing slab, wall, or other structural concrete, that area shall be X-rayed prior to drilling to show the locations of conduits and resteel.

B. Electrical Equipment and Fixtures

1. Remove existing electrical equipment and fixtures where shown or required with such care as may be required to prevent unnecessary damage, to keep existing systems in operation and to keep the integrity of the grounding systems.
- C. Switchboards
1. Remove and modify distribution switchboards as shown.
 2. Disconnect and dismantle switchboards that are to be removed and dispose of all components off the site.
 3. Remove circuit breakers and other control equipment that will no longer be used from modified switchboards unless otherwise shown or specified.
 4. Cut square all new openings into the modified switchboard panels and dress smooth to the dimensions required for the installation of the new equipment.
- D. Motors
1. Disconnect and remove motors where shown or specified.
 2. Remove from the site motors not designated to remain the property of the Owner.
 3. Store in an enclosed, heated storage area motors or other electrical gear designated for reuse.
- E. Conduit and Wire
1. Remove conduits and wires where shown, or associated with equipment being removed.
 2. Cut abandoned conduits in floor or ceiling slabs, or in walls, flush with the slab or wall at the point of entrance. Plug the conduit suitably and repair the area in a flush, smooth, approved manner.
 3. Disassemble and remove from the site exposed conduits and their supports.
 4. Repair all areas of work to prevent rust spots on exposed surfaces.
 5. Dispose of all removed wire, conduits, supports, and appurtenances.
- F. Underground Ducts
1. Remove wiring in the underground duct system where shown or otherwise required.
 2. Verify the function of all wiring before disconnecting and removing it.
 3. Plug ducts which are not to be reused, where they enter buildings and make watertight.
- G. Direct-Burial Cable
1. Abandon direct-burial cable where shown.
 2. Disconnect such cable at both ends of the run.
 3. Cut back the cable to the point of entrance of a building or structure.
 4. Patch and make watertight all openings in buildings for entrance of abandoned direct-burial cable.
- H. Overhead Wiring
1. Abandon poles and overhead wiring as shown and specified.
 2. Existing substation and poles owned by the local electric utility company will be removed by the local electric utility company.
 3. Remove completely from the site abandoned poles not owned by the local electric utility company.
 4. Perform this work after the new service has been completed and energized, and in accordance with the approved schedule.

5. Make all the necessary arrangements with the local electric utility company for the removal of their transformers and metering equipment after the new electrical system has been installed and energized.

I. Lighting Fixtures

1. Carefully remove and relocate lighting fixtures as shown on the Drawings.
2. Remove fixtures from the project site that are not shown to be relocated.

J. Panelboards

1. Remove panelboards where shown and dispose of off the project site.
2. Perform all cutting and patching necessary for the removal and replacement of panelboards.

K. Miscellaneous Electrical Equipment

1. Remove wall switches, receptacles, starters, and other miscellaneous electrical equipment as required and dispose of off the project site.
2. Remove all equipment with care so as to minimize damage to architectural and structural members. Repair any damage incurred as herein specified.

3.5 CLEANING

- A. General: When all work is completed and has been tested and accepted by the Engineer, the Contractor shall clean all light fixtures, equipment, and exposed surfaces that have been directly affected by this work. The Contractor, insofar as the work is concerned, shall at all times keep the premises in a neat and orderly condition and at the completion of the work shall properly clean up and remove any excess materials from the site.

END OF SECTION 26 0505

SECTION 26 0510

BASIC ELECTRICAL MATERIALS AND METHODS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to provide basic electrical materials in accordance with the plans and as specified herein.
- B. This section includes limited scope general construction materials and methods for application with electrical installations as follows:
 - 1. Excavation for underground utilities and services, including underground raceways, vaults, and equipment.
 - 2. Miscellaneous metals for support of electrical materials and equipment.
 - 3. Nailers, blocking, fasteners, and anchorage for support of electrical materials and equipment.
 - 4. Joint sealers for sealing around electrical materials and equipment, and for sealing penetrations in fire and smoke barriers, floors, and foundation walls.
 - 5. Concrete used for the following:
 - a. Housekeeping pads.
 - b. Pipe supports.
 - c. Filling in boxouts in floor slabs, after conduit installation.
 - d. Pole foundations.

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Perform all work associated with basic electrical materials in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein. Where provisions of the pertinent codes and standards conflict with this specification, the more stringent provision shall govern.
 - 1. American Institute of Steel Construction (AISC) "Specifications for the Design, Fabrication, and Erection of Structural Steel for Buildings."
 - 2. American Welding Society (AWS) D1.1 "Structural Welding Code - Steel."
 - 3. National Electrical Code (NEC).
- B. Qualifications
 - 1. Installer Qualifications. Engage an experienced Installer for the installation and application of joint sealers.
 - 2. Qualify welding processes and welding operators in accordance with American Welding Society (AWS) D1.1 "Structural Welding Code -Steel."
 - a. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

1.4 SUBMITTALS

- A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.
- B. Submit the following in accordance with Conditions of Contract and Division 01 specification sections.
 - 1. Product data for joint sealers.
 - 2. Shop drawings detailing fabrication and installation for metal fabrications and wood supports and anchorage for electrical materials and equipment.
 - 3. Samples of joint sealer, consisting of strips of actual products showing full range of colors available for each product.
 - 4. Welder certificates, signed by Contractor, certifying that welders comply with requirements specified under "Quality Assurance" article of this section.

1.5 JOB CONDITIONS

- A. Apply joint sealers under temperature and humidity conditions within the limits permitted by the joint sealer manufacturer. Do not apply joint sealers to wet substrates.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver joint sealer materials in original unopened containers or bundles with labels informing about manufacturer, product name and designation, color, expiration period for use, pot life, curing time, and mixing instructions for multicomponent materials.
- B. Store and handle joint sealer materials in compliance with the manufacturer's recommendations to prevent their deterioration and damage.

1.7 DEFINITIONS

- A. Additional Excavation: Where excavation has reached required subgrade elevations, if unsuitable bearing materials are encountered, continue excavation at the direction of the Engineer until suitable bearing materials are reached. The Contract Sum may be adjusted by an appropriate Contract Modification.
- B. Subbase as used in this section refers to the compacted soil layer used in pavement systems between the subgrade and the pavement base course material.
- C. Subgrade as used in this section refers to the compacted soil immediately below the slab or pavement system.
- D. Unauthorized excavation as used in this section consists of removal of materials beyond indicated subgrade elevations or dimensions without specific direction from the Engineer.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Soil Materials: Provide soil materials as specified in Division 31 - Earthwork.

B. Miscellaneous Metals and Reinforcing Materials

1. Provide steel plates, shapes, bars, and bar grating conforming to ASTM A 36.
2. Provide cold-formed steel tubing conforming to ASTM A 500.
3. Provide hot-rolled steel tubing conforming to ASTM A 501.
4. Provide steel pipe conforming to ASTM A 53, Schedule 40, welded.
5. Provide non-shrink, non-metallic grout which is pre-mixed, factory-packaged, non-staining, non-corrosive, non-gaseous grout, recommended for interior and exterior applications.
6. Provide fasteners which are zinc-coated, type, grade, and class as required.
7. Provide deformed reinforcing bars conforming to ASTM A615, Grade 40 or 60, unless otherwise indicated.
8. Provide reinforcing materials with size and placement as shown on the plans.
9. Provide welded wire fabric conforming to ASTM A185.

C. Miscellaneous Lumber

1. Provide framing materials that are Standard Grade, light framing size lumber of any species. Number 3 Common or Standard Grade boards complying with West Coast Lumber Inspection Bureau (WCLIB) or American Wood Preservers Association (AWPA) rules, or Number 3 boards complying with Southern Pine Inspection Bureau (SPIB) rules. Lumber shall be preservative treated in accordance with AWPA LP-2, and kiln dried to a moisture content of not more than 19 percent.
2. Provide construction panels which are plywood panels; American Plywood Association (APA) C-D PLUGGED INT, with exterior glue; thickness as indicated, or if not indicated, not less than 15/32 inch.

D. Joint Sealers

1. Provide joint sealers, joint fillers, and other related materials compatible with each other and with joint substrates under conditions of service and application.
2. Provide colors as selected by the Engineer from manufacturer's standard colors.
3. Provide the following types of elastomeric joint sealers:
 - a. One-part, mildew-resistant, silicone sealant complying with ASTM C 920, Type S, Grade NS, Class 25, for uses in non-traffic areas for glass, aluminum, and nonporous joint substrates, formulated with fungicide, intended for sealing interior joints with non-porous substrates; and subject to in-service exposure to conditions of high humidity and temperature extremes.
4. Provide fire-resistant watertight joint sealers which are two-part, foamed-in-place, silicone sealant formulated for use in through-penetration firestopping around cables, conduit, pipes, and duct penetrations through fire-rated walls and floors. Sealants and accessories shall have fire resistance ratings indicated, as established by testing identical assemblies in accordance with ASTM E 814, by UL, or other testing and inspection agency acceptable to authorities having jurisdiction. Material shall be a closed-cell, non-adhering material.

E. Concrete: Provide concrete as specified in Division 03 - Concrete.

2.2 MANUFACTURERS

A. Available Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:

1. One Part, Mildew-Resistant, Silicone Sealant
 - a. "Dow Corning 786," Dow Corning Corp.

- b. "SCS 1702 Sanitary," General Electric Co.
- c. "863 #345 White," Pecora Corp.
- d. "Proglaze White," Tremco Corp.
- e. "OmniPlus," Sonneborn Building Products Div.
- 2. Fire Resistant Joint Sealers
 - a. "Dow Corning Fire Stop Foam," Dow Corning Corp.
 - b. "Pensil 851," General Electric Co.

PART 3 - EXECUTION

3.1 COORDINATION

- A. Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.
- B. Field-verify all locations and dimensions to ensure that the equipment will be properly located, readily accessible, and installed in accordance with all pertinent codes and regulations, the contract documents, and the referenced standards.
- C. The work shall be carefully laid out in advance, and where cutting, drilling, etc., of floors, walls, ceilings, or other surfaces is necessary for proper installation, this work shall be carefully done, and any drainage to building, piping, or equipment shall be repaired by skilled mechanics of the trades involved at no additional cost to the Owner.
- D. In the event any discrepancies are discovered, immediately notify the Engineer in writing. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3.2 PREPARATION

- A. Preparation for Joint Sealers
 - 1. Clean surfaces of joints immediately before applying joint sealers to comply with recommendations of joint sealer manufacturer.
 - 2. Apply joint sealer primer to substrates as recommended by joint sealer manufacturer. Protect adjacent areas from spillage and migration of primers, using masking tape. Remove tape immediately after tooling without disturbing joint seal.

3.3 EXCAVATION

- A. Comply with the applicable requirements of Division 31 - Sitework.
- B. For the excavation of underground vaults and electrical structures conform to elevations and dimensions shown within a tolerance of +0.10 foot and extending a sufficient distance to permit placing and removal of concrete formwork, installation of services, other construction, and for inspection.
 - 1. Excavate, by hand, area within drip line or large trees. Protect the root system from drainage and drying out. Maintain moist conditions for root system and cover exposed roots with burlap. Paint root cuts of 1 inch in diameter and larger with emulsified asphalt tree paint.
 - 2. Take care not to disturb bottom of excavation. Excavate by hand to final grade just before concrete reinforcement or precast concrete is placed.

- C. Excavate trenches for electrical installation as follows:
 - 1. Excavate trenches to the uniform width, sufficiently wide to provide ample working room and a minimum of 6 to 9 inches clearance on both sides of raceways and equipment.
 - 2. Excavate trenches to depth indicated or required.
 - 3. Limit the length of open trench to that in which installations can be made and the trench backfilled within the same day.
 - 4. Where rock is encountered, carry excavation below required elevation and backfill with a layer of crushed stone or gravel prior to installation of raceways and equipment. Provide a minimum of 6 inches of stone or gravel cushion between rock bearing surface and electrical installations.

- D. Backfill excavations as promptly as work permits, but not until completion of the following:
 - 1. Inspection, testing, approval, and locations of underground utilities have been recorded.
 - 2. Removal of concrete formwork.
 - 3. Removal of shoring and bracing, and backfilling of voids.
 - 4. Removal of trash and debris.

- E. Where subsidence occurs at electrical installation excavation during the period 12 months after Substantial Completion, remove surface treatment (i.e., pavement, lawn, or other finish), add backfill material, compact to specified conditions, and replace surface treatment. Restore appearance, quality, and condition of surface or finish to match adjacent areas.

3.4 INSTALLATION

- A. Erection of Metal Supports and Anchorage
 - 1. Cut, fit, and place miscellaneous metal fabrications accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
 - 2. Provide field welding which complies with AWS "Structural Welding Code."

- B. Erection of Wood Supports and Anchorage
 - 1. Cut, fit, and place nailers, blocking, and anchorage accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
 - 2. Select fastener sizes that will not penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood members.
 - 3. Attach to substrates as required to support applied loads.

- C. Application of Joint Sealers
 - 1. Comply with joint sealer manufacturers' printed application instructions applicable to products and applications indicated, except where more stringent requirements apply.
 - 2. Comply with recommendations of ASTM C 962 for use of elastomeric joint sealants.
 - 3. Immediately after sealant application and prior to time shinning or curing begins, tool sealants to form smooth, uniform beads, to eliminate air pockets, and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.
 - 4. Install firestopping sealant, including forming, packing, and other accessory materials, to fill openings around electrical services penetrating floors and walls, to provide fire stops with fire resistance ratings indicated for floor or wall assembly in which penetration occurs. Comply with installation requirements established by testing and inspecting agency. Use dams to obtain proper sealing.

D. Installation of Housekeeping Pads

1. Strength, spacing, and placement of equipment housekeeping pads. Provide a housekeeping pad for all floor-mounted equipment, unless noted otherwise. Fabricate pad as follows:
 - a. Coordinate size of housekeeping pad with actual equipment provided. Fabricate base 4 inches larger in both directions than the overall dimensions of the supported equipment.
 - b. Form concrete pads with framing lumber treated with form release compounds. Provide 1 inch chamfer on top edge and corners of pad.
 - c. Install reinforcing bars and place anchor bolts and sleeves to facilitate securing equipment.

END OF SECTION 26 0510

SECTION 26 0519

WIRES, CABLES, AND CONNECTORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to install wires, cables, and connectors in accordance with the plans and as specified herein.
- B. Miscellaneous: This section includes wires, cables, and connectors for power, lighting, signal, control, and related systems rated 600 volts and less.

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Perform all work associated with wires, cables, and connectors in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
 - 1. National Fire Protection Association (NFPA) 70, National Electrical Code (NEC).
 - 2. Underwriters' Laboratories, Inc. (UL) Compliance. Provide components which are listed and labeled by UL under the following standards.
 - a. UL Standard 83 Thermoplastic Insulated Wires and Cables.
 - b. UL Standard 486A Wire Connectors and Soldering Lugs for Use with Copper Conductors.
 - c. UL Standard 854 Service Entrance Cable.
 - 3. National Electrical Manufacturers Association/Insulated Cable Engineers Association (NEMA/ICEA) Compliance. Provide components which comply with the following standards:
 - a. WC-5 Thermoplastic Insulated Wire and Cable for the Transmission and Distribution of Electrical Energy.
 - b. WC-7 Cross-Linked Polyethylene-Insulated Wire and Cable for the Transmission and Distribution of Electrical Energy.
 - c. WC-8 Ethylene Propylene Rubber-Insulated Wire and Cable for the Transmission and Distribution of Electrical Energy.
 - 4. Institute of Electrical and Electronic Engineers (IEEE) Compliance. Provide components which comply with the following standards:
 - a. Standard 82 Test Procedure for Impulse Voltage Tests on Insulated Conductors.
- B. Regulatory Requirements: Comply with provisions of the following code and conform to applicable codes and regulations regarding toxicity of combustion products of insulating materials.

1.4 SUBMITTALS

- A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.
- B. Submittals: Submit the following in accordance with Conditions of Contract and Division 01 specification sections:
 - 1. Product data for electrical wires, cables, and connectors.
 - 2. Product data for Megger insulation testing instrument.
 - 3. Report sheets for Megger testing.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver wire and cable properly packaged in factory-fabricated-type containers, or wound on NEMA specified type wire and cable reels.
- B. Store wire and cable in clean, dry space in original containers. Protect products from weather, damaging fumes, construction debris, and traffic.
- C. Handle wire and cable carefully to avoid abrading, puncturing, and tearing wire and cable insulation and sheathing. Ensure that dielectric resistance integrity of wires/cables is maintained.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Wires and Cables
 - 1. Provide electrical wires and cables of manufacturer's standard materials as indicated by published product information designed and constructed as recommended by manufacturer for a complete installation, and for application indicated. Except as otherwise indicated, provide copper conductors with conductivity of not less than 98% at 20 deg C (68 deg F).
 - 2. Provide factory-fabricated wires of sizes, ampacity ratings, and materials for applications and services indicated. Where not indicated, provide proper wire selection as determined by Installer to comply with project's installation requirements, NEC and NEMA standards. Select from the following UL types those wires with construction features which fulfill project requirements:
 - a. Provide Type RHW for dry and wet locations, maximum operating temperature 75 deg C (167 deg F). Insulation, moisture and heat-resistant cross-linked polyethylene; outer covering, moisture-resistant, flame-retardant, non-metallic covering; conductor, annealed copper, Class B stranding.
 - b. Provide Type XHHW for dry locations, maximum operating temperature 90 deg C (194 deg F). Insulation, flame-retardant, cross-linked polyethylene; conductor, annealed copper, Class B stranding.
 - c. Provide Type THW for dry and wet locations; maximum operating temperature 75 deg C (167 deg F). Insulation, moisture and heat-resistant, flame-retardant thermoplastic; conductor, annealed copper, Class B stranding.

- d. Provide Type THWN/THHN for dry and wet locations; maximum operating temperature 75 deg C (167 deg F). Insulation, moisture and heat-resistant, flame-retardant thermoplastic; conductor, annealed copper, Class C stranding.
 - e. Provide Type MTW for dry locations, maximum operating temperature 90 deg C (167 deg F). Insulation, flame-retardant, moisture, heat and oil-resistant thermoplastic, Class C stranding.
3. VFD Cable
- a. General
 - 1) UL 1277, UL 1581.
 - 2) Flexible multi-conductor motor supply cable.
 - 3) 100% Overall foil or tape shield, drain wire, and PVC jacket.
 - 4) Bare uncoated copper ground conductor.
 - 5) Rated 1000VAC / 2000VAC Peak.
 - b. Conductors
 - 1) ASTM B8/B33.
 - 2) Tinned copper conductors.
 - 3) Class C stranding.
 - c. Insulation: Flame-retardant, moisture-resistant thermoset (XLP) insulation.
 - d. Conductor Types: Type XHHW conductors, 1000-Volt, 90 deg C, wet or dry locations, UL 44.
4. Provide color coding for phase identification in accordance with requirements in Division 26 Section "Electrical Identification".
- B. Connectors and Terminals
- 1. General: Provide UL-type factory-fabricated metal connectors and terminals of sizes, ampacity ratings, materials, types, and classes indicated.
 - 2. Twist-on Connectors: Conforming to UL 486 C, consisting of a tapered spring with insulated outer covering.
 - 3. Compression Connectors: Tin-plated copper. Configuration shall be tee, in-line, etc., as required.
 - 4. Terminals: Tin-plated copper, compression locking fork tongue with insulated barrel.
 - 5. Compression Lugs: Tin-plated copper, standard barrel, one-hole or two-hole as required.
 - 6. Heat-Shrink Insulation: Heat-shrinkable polyolefin with an internally applied adhesive watertight sealant.
 - 7. Motor Connection Kit: Consisting of compression lugs bolted together, cloth tape cover, and heat-shrink insulation.
 - 8. Splice Kit: Consisting of compression connector and heat-shrink insulation.
- C. Wire and Cable Accessories
- 1. Tapes and Insulating Materials
 - a. Designed for use as electrical insulating tape.
 - b. Plastic Tape: Vinyl, 7 mil, 3/4-inch wide, -15 to 100 deg C, UL 510.
 - c. Rubber Tapes: Self-fusing, corona-resistant, compatible with specified insulations, minimum dielectric strength of 800 V per mil, 0 to 90 °C.
 - d. Arc-Proofing: Thirty mil, up to 3-inches wide, rated for a 200-amp arc for 30 seconds.
 - e. Heat Shrink Insulation: Heat shrinkable polyolefin, internal adhesive sealant, UL 486D.
 - 2. Hardware
 - a. General: Carbon steel, cadmium plated.
 - b. Bolts: ASTM 449, hex-head, SAE Grade 5, UNC, Class 2B threads.

- c. Nuts: ASME B18.2.2, hexagon, SAE Grade 5, UNC, Class 2B threads.
 - d. Flat Washers: ASME B18.22.1; type A plain, wide-series.
 - e. Compression (Belleville) Washers: Conical type washer, 0.0005-in.-thick.
3. Wire-Pulling Lubricant
- a. Listed by Underwriters Laboratories.
 - b. Biodegradable, non-flammable, and non-toxic.
 - c. Solid residue of not more than 1.5 percent and a viscosity of at least 50,000 C.P.S.
 - d. Compatible with conductor insulation per IEEE 1210.

2.2 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the work include, but are not limited to, the following:
- 1. Wire and Cable
 - a. American Insulated Wire Corp.
 - b. Brintec Corp.
 - c. Carol Cable Co., Inc.
 - d. Senator Wire and Cable Co.
 - e. Southwire Company.
 - 2. Connectors and Terminals for Wires and Cable Conductors
 - a. AMP.
 - b. Burndy Corporation.
 - c. Ideal Industries, Inc.
 - d. 3M Company.
 - e. O-Z/Gedney Co.
 - f. Raychem.
 - g. Thomas and Betts Corp.
 - 3. Tapes and Insulating Materials
 - a. Okonite Company
 - b. Plymouth Rubber Company
 - c. Raychem
 - d. 3M Company
 - e. Tyco Corporation, AMP products
 - 4. Wire-Pulling Lubricant
 - a. Polywater J.
 - b. High Performance Cable Lubricant.
 - c. Ideal.
 - d. Aqua-Jel 2.

PART 3 - EXECUTION

3.1 WIRE AND CABLE INSTALLATION

- A. Uses Permitted
- 1. Install UL Type USE cable for all conductors provided between utility transformers and service entrance rated equipment.
 - 2. Install UL Type RHW or XHHW cable for power feeders, motor branch circuits, panelboard feeder circuits, and below grade or exterior control and metering circuits.
 - 3. Install UL Type THWN/THHN, THW, or XHHW wiring in conduit, for branch circuits for lighting, receptacles, and interior control and metering circuits.

4. Install UL Type MTW wiring interior to instrument and control panels. Conductors shall be stranded with at least 19 strands in the conductor.
 5. Install VFD Cable for all branch circuits of VFD controlled equipment.
- B. Install electrical cables, wires, and connectors in compliance with NEC.
 - C. Coordinate cable installation with other work.
 - D. Pull conductors simultaneously where more than one is being installed in same raceway. Use UL-listed pulling compound or lubricant, where necessary.
 - E. Use pulling means, including fish tape, cable, rope, and basketweave wire/cable grips which will not damage cables or raceways. Do not use rope hitches for pulling attachment to wire or cable.
 - F. Conceal all cable in finished spaces.
 - G. Install exposed cable parallel and perpendicular to surfaces or exposed structural members, and follow surface contours, where possible.
 - H. Power conductors shall be No. 12 AWG minimum. Control conductors may be No. 14 AWG where circuit amperes and the NEC allow and when length does not pose a voltage drop problem.
 - I. Conductors shall be sized such that voltage drop does not exceed 3% for branch circuits or 5% for feeder/branch circuit combination.
 - J. Provide adequate length of conductors within electrical enclosures and train the conductors to terminal points with no excess. Bundle multiple conductors, with conductors larger than No. 10 AWG cabled in individual circuits. Make terminations so there is no bare conductor at the terminal.
 - K. Provide connectors, splices, or lugs as required for all oversized conductors due to voltage drop.

3.2 CONNECTOR, TERMINAL, AND SPLICE INSTALLATION

- A. Uses Permitted
 1. Install twist-on connectors for lighting, communication, and receptacle branch circuits and utilization equipment only in size No. 8 AWG and smaller and only in finished areas.
 2. Install forked-tongue terminals on control and metering conductors which connect to terminal blocks.
 3. Install motor connection kits on all polyphase induction motors.
 4. Install compression connectors and lugs for all other connections.
- B. Use splice and tap connectors which are compatible with conductor material.
- C. Install all compression connectors, splices, and lugs with a ratcheting tool which will not release until proper compression is achieved.
- D. Install splices which possess equivalent-or-better mechanical strength and insulation ratings than conductors being spliced.

- E. Service entrance conductors shall be installed without splices. Electrical equipment feeders shall be spliced only where shown or specifically approved. Control and metering conductors shall be installed without splices.
- F. All splices shall be made only by specific permission of the A/E, and then only in manholes or pullboxes, and shall be sealed watertight with a heat-shrink insulation.
- G. Tighten electrical connectors and terminals in accordance with manufacturer's published torque tightening values. Where manufacturer's torquing requirements are not indicated, tighten connectors and terminals to comply with tightening torques specified in UL Standards 486A and 486B.

3.3 FIELD QUALITY CONTROL

- A. The Contractor shall test each electrical circuit after permanent cables are in place with terminators installed, but before cable or wire is connected to equipment or devices to demonstrate that each circuit is free from improper grounds and short circuits.
- B. The Contractor shall test by Megger Test, the insulation resistance between phases and from each phase to ground for each of the following feeder and motor branch circuits:
 - 1. Motor Control Center.
 - 2. Panelboard.
 - 3. Switchboards.
 - 4. Switchgear.
 - 5. Motors.
- C. The Megger Testing shall be witnessed by the A/E. The A/E shall be notified at least 48 hours in advance of testing.
- D. Measure the insulation resistance at 500 volts dc with a hand-cranked or motor-driven "Megger" insulation testing instrument. Battery-operated test instruments are not permitted. All test instruments are to be provided by the Contractor.
- E. If any insulation resistance measures less than 50 megohms, the cable shall be considered faulty with the cable failing the insulation test. In moist environments, bag the ends of the cable to prevent a faulty Megger test.
- F. Any cable which fails the insulation tests or which fails when tested under full load conditions shall be replaced with new cable for the full length and retested. Corrective action and repeated tests shall be accomplished at the Contractor's own expense.
- G. Maintain testing report sheets identifying each cable tested, what each feeder or motor branch circuit will be connected to, and the level of insulation resistance measured. Test reports shall be signed by the tester, initialed by the A/E and sent to the A/E within 48 hours.

END OF SECTION 26 0519

SECTION 26 0523

SIGNAL AND COMMUNICATION CABLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.
- B. Related Sections: The following sections contain requirements that relate to this section:
 - 1. Division 26 Section "Basic Electrical Requirements".
 - 2. Division 26 Section "Basic Electrical Materials and Methods".
 - 3. Division 26 Section "Wires and Cables".

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install communication and signal cables in accordance with the plans and as specified herein.
- B. Cables and Accessories: This section includes cables and connectors designed for and used in communication, control, data, and signal circuits.

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Perform all work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
- B. Connected Equipment Manufacturer Approval: Where cables specified in this section are used to provide signal paths for systems specified in other sections of these specifications or for systems furnished under other contracts, obtain review of the cable characteristics and approval for use with the connected system equipment by the connected equipment manufacturers.
- C. Electrical Component Standard: Provide work complying with applicable requirements of National Fire Protection Association (NFPA) 70 "National Electrical Code (NEC)."
- D. Toxicity: Comply with applicable codes and regulations regarding toxicity of combustion products of materials used in communication and signal cables.
- E. National Electrical Manufacturer's Association/Insulated Cable Engineers Association (NEMA/ICEA) Compliance: Comply with NEMA/ICEA Standard Publication WC 5, "Thermoplastic Insulated Wire and Cable for the Transmission and Distribution of Electrical Energy"; WC 30, "Color Coding of Wires and Cables," pertaining to signal transmission cable; and WC 41, "Coaxial Communication Cable."

- F. American Society for Testing and Materials (ASTM) Compliance: Comply with applicable requirements of ASTM B 1, B 2, B 3, B 8, B 33, D 2219, and D 2220. Provide copper conductors with conductivity of not less than 98 percent at 20 deg C (68 deg F).
- G. Underwriters' Laboratories, Inc. (UL) Compliance: Comply with applicable requirements of UL Standard 83, "Thermoplastic Wires and Cables"; UL 486 A, "Wire Connectors and Soldering Lugs for Use with Copper Conductors"; and UL 910, "Test Method for Fire and Smoke Characteristics of Cables Used in Air Handling Spaces." Provide products that are UL listed and labeled.
- H. Electronic Industries Association (EIA) Compliance: Comply with EIA Standards EIA-230, "Color Marking of Thermoplastic Wire," EIA-258, "Semi-Flexible Air Dielectric Coaxial Cables and Connectors, 50 Ohms," and TIA/EIA-568A, "Commercial Building Telecommunications Cabling Standard."
- I. MIL-SPEC Compliance: Comply with MIL-C-3093, "Telephone Cable; Inside Distribution Wiring," MIL-C-55021, "Twisted-Pair and Triplet Cables; Hookups General Specifications," MIL-C-17/28, "Radio Frequency Flexible Coaxial Cables, 50 Ohms," and MIL-C-17/29, "Radio Frequency Flexible Coaxial Cables, 75 Ohms."

1.4 SUBMITTALS

- A. General: Furnish manufacturer's product data, test reports, and material certifications as required.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver wire and cable properly packaged in factory fabricated type containers, or wound on NEMA specified type wire and cable reels.
- B. Store wire and cable in clean dry space in original containers. Protect products from weather, damaging fumes, construction debris, and traffic.
- C. Handle wire and cable carefully to avoid abrading, puncturing, and tearing wire, cable insulation, and sheathing. Ensure that dielectric resistance and characteristic impedance integrity of the cable are maintained.

PART 2 - PRODUCTS

2.1 SHIELDED TWISTED PAIR CABLES

- A. 600 Volt Rated Shielded Twisted Pair or Triplet Cables: Shielded twisted pair or triplet cable, 16 AWG stranded tinned copper conductors, polyethylene insulation, aluminum tape shield, 18 AWG tinned copper drain wire, UV stabilized PVC jacket, 100 percent shield coverage. Suitable for direct burial. Multiple pair cables shall have an overall shield and an overall PVC jacket.

2.2 CONTROL NETWORK CABLES

- A. Ethernet: Four pair, unshielded, Category 6, 24 AWG, stranded copper with PVC insulation and PVC jacket. Cable shall be UL listed.

B. Fiber-Optic:

1. Multimode graded index, tight-buffered, optical glass fiber cores cable:
 - a. Compatible with LED-based transmission system and suitable for fiber optic Ethernet LAN standards including point-to-point Fiber Optic Inter-Repeater Link (FOIRL) network, and ANSI standard Fiber Distribution Data Interface (FDDI) networks.
 - b. Do not use cable with plastic fiber core construction.
 - c. The number of cables and the number of fibers in each cable shall be as specified herein and as shown on the Drawings.
 - d. Splitter Kits: The cable shall be provided with the necessary number of splitter kits to accommodate the number of terminations shown for each interconnection box on the Drawings.
 - e. Cable shall be assembled with inner strength members, polyester core separator tape, Aramid yarn or similar strength members.
 - f. Jackets: Inner PVC jacket with rip cord, and polyethylene outer jacket rip cord. Provide a cable outer jacket that is UV inhibited, fungus resistant and flame retardant.
 - g. Attenuation losses: Shall be 3.5 dB/km or less at a wavelength of 850 nm and 1.0 dB/km or less at a wavelength of 1300 nm.
 - h. Bandwidth: Minimum bandwidth shall be 160 MHz-km at 850 nm and 500 MHz-km at 1300 nm.
 - i. Provide cable unaffected by continuous or intermittent submergence in water, damage from lightning strikes. Shall be resistant to fuel, petro-chemicals and other caustic or noxious materials.
 - j. Cable shall be suitable for indoor and outdoor use conduit installation.
 - k. Provide continuous inter- and intra- building installation, closet to closet, suitable for passing through inside conduit locations directly from outside conduit.
 - l. Cable shall be UL listed as type OFN per NEC 770-51 and NEC 770-53.
 - m. Cable specifications are as follows:
 - 1) Fiber Size: 62.5 micron/125 micron (core/cladding)
 - 2) Fiber Count: 12 fibers
 - 3) Nominal Cable Diameter: 0.256 inches
 - 4) Nominal Cable Weight: 33 pounds per 1000 ft
 - 5) Crush Resistance: 500 pounds per inch
 - 6) Maximum Tensile Load: 600 pounds (installation)
 - 7) Maximum Tensile Load: 135 pounds (in-service)
 - 8) Minimum Bend Radius: 5.1 inches (installation)
 - 9) Minimum Bend Radius: 2.6 inches (in-service)
 - 10) Operating Temperature: -40 to 80degC (core/cadding)
 - 11) Guaranteed to achieve 300/550 meters at 850/1300 nm for Gigabit Ethernet (IEEE 802.3z) standard-compliant links.
2. Single mode, tight-buffered, optical glass fiber cores cable:
 - a. Compatible with laser-based transmission system and suitable for fiber optic Ethernet LAN standards including point-to-point Fiber Optic Inter-Repeater Link (FOIRL) network, and ANSI standard Fiber Distribution Data Interface (FDDI) networks.
 - b. Do not use cable with plastic fiber core construction.
 - c. The number of cables and the number of fibers in each cable shall be as specified herein and as shown on the Drawings.

- d. Splitter Kits: The cable shall be provided with the necessary number of splitter kits to accommodate the number of terminations shown for each interconnection box on the Drawings.
- e. Cable shall be assembled with inner strength members, polyester core separator tape, Aramid yarn or similar strength members.
- f. Jackets: Inner PVC jacket with rip cord, and polyethylene outer jacket rip cord. Provide a cable outer jacket that is UV inhibited, fungus resistant and flame retardant.
- g. Attenuation losses: Shall be 0.5 dB/km or less at a wavelength of 1310 nm and 0.4 dB/km or less at a wavelength of 1550 nm.
- h. Provide cable unaffected by continuous or intermittent submergence in water, damage from lightning strikes.
- i. Cable shall be suitable for indoor and outdoor use conduit installation.
- j. Cable shall be UL listed as type OFN per NEC 770-51 and NEC 770-53.
- k. Cable specifications are as follows:
 - 1) Fiber Size: 8.3 micron/125 micron (core/cladding)
 - 2) Fiber Count: 12 fibers
 - 3) Nominal Cable Diameter: 0.256 inches
 - 4) Nominal Cable Weight: 33 pounds per 1000 ft
 - 5) Crush Resistance: 500 pounds per inch
 - 6) Maximum Tensile Load: 600 pounds (installation)
 - 7) Maximum Tensile Load: 135 pounds (in-service)
 - 8) Minimum Bend Radius: 5.1 inches (installation)
 - 9) Minimum Bend Radius: 2.6 inches (in-service)
 - 10) Operating Temperature: -40 to 80degC (core/cadding)

2.3 CONNECTORS AND TERMINALS

- A. Shielded Twisted Pair:
 - 1. Provide terminals as specified in Division 26 Section "Wires, Cables, and Connectors."
- B. Ethernet Cable:
 - 1. Provide RJ45 plug at each end.
- C. Fiber-Optic Cable:
 - 1. Furnish connect micron core/claddings and components and use specific tools and methods as recommended by the connector manufacturer to form a complete connector system.
 - 2. Provide fiber optic SC simplex connectors; multimode and single mode versions to match cable type. Connectors shall be polymer body with a precision zirconia ferrules.
 - a. Connector Specifications
 - 1) Insertion Loss: 0.15/0.30 dB (typical/maximum)
 - 2) Durability Delta: 0.1 dB (1000 matings)
 - 3) Operating Temperature: -40 to +80°C
 - 4) Cable Retention: 40 pounds
 - 3. Splicing/Splitting
 - a. Contractor shall field splice each fiber to a pigtail cable at the termination enclosures. All splices shall be made by the fusion process and shall have a splice loss no greater than 0.35 dB. Loss measurement shall be performed at the time of splicing and documentation shall be furnished for each splice. Splice testing shall

be witnessed by the Owner's project representative. Prior to stripping the cable, Contractor shall record the cable length from the cable jacket. This length shall be documented and included in the test documentation.

2.4 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering control/signal cabling products that may be incorporated in the work include but are not limited to the following:
- B. Manufacturers: Subject to compliance with requirements, provide products of one of the following:
 - 1. Cables.
 - a. Alpha Communications.
 - b. American Insulated Wire Corp.
 - c. AT&T Network Systems.
 - d. Belden Div; Cooper Industries.
 - e. Berk-Tek Company.
 - f. Cable Continental Cables Co.
 - g. Furon Dekoron Division.
 - h. Guardian Products Division, General Cable Corporation.
 - i. Mohawk Wire & Cable Corp.
 - j. Phelps Dodge Cable and Wire Co.
 - k. Pirelli Cable Corp.
 - 2. Connectors.
 - a. Thomas & Betts Corporation.
 - b. 3M Company.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine areas and conditions under which communication and signal cables are to be installed. Notify Engineer/Architect in writing of conditions detrimental to proper completion of the work. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to the Engineer/Architect.

3.2 COORDINATION

- A. Coordinate with other work, including wires/cables, boxes, and raceways, as necessary to interface installations of communication and signal cables with other work.

3.3 APPLICATIONS

- A. Use 300 volt rated single or multiple pair signal cables for all analog dc signals (4-20 mA, 1-5 volt, etc.).
- B. Use Ethernet cable for all telephone lines.

- C. Use Ethernet cable for all control network connections, unless noted otherwise on the Drawings.

3.4 INSTALLATION

- A. General: Install communication and signal cables in accordance with manufacturer's written instructions, in compliance with NEC, and in accordance with standard industry practice.
- B. Coordinate installation with other work.
- C. Install communication and signal cables without damaging conductors, shield, or jacket. Do not either in handling or installation bend cable to smaller radii than minimum recommended by manufacturer. Ensure that medium manufacturer's recommended pulling tensions are not exceeded. Pull conductors simultaneously where more than one is being installed in same raceway. Use pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Use pulling means, including fish tape, cable, rope, and basket weave wire/cable grips that will not damage cable or raceway.
- D. Install all cables in conduit.
- E. Splices are allowed only at indicated splice points. Where splices are indicated, use splice and tap connectors that are compatible with media material.
- F. Tighten connectors and terminals, including screws and bolts, in accordance with manufacturer's published instructions for torque tightening values.
- G. Cable Terminations: Terminate cables on numbered terminal blocks where cable terminations are made on backboards and in cabinets and outlet boxes.
- H. Wiring at Backboards and Cabinets: Install conductors parallel to and at right angles to walls. Bundle, lace, and train the conductors to terminal points with no excess. Use wire distribution spools at points where cables are fanned or conductors turned. Label each terminal.
- I. Conductor Terminations: Terminate conductors of cables on terminal blocks using tools recommended by terminal block manufacturer.

3.5 GROUNDING

- A. Provide equipment grounding connections for telephone systems as indicated. Tighten connections to comply with tightening torque specified in UL Standard 486A to ensure permanent and effective grounding.

3.6 FIELD QUALITY CONTROL

- A. Copper Cabling.
 - 1. Provide at least 10-days notice in writing when the cabling network is ready for final acceptance testing.
 - 2. All testing shall be in the presence of the Owner's project representative.
 - 3. Test each UTP cable in accordance with EIA/TIA-568B guidelines to Category 6 performance testing parameters.

4. Factory test results for patch cables will be acceptable where the factory testing parameters clearly meet or exceed the EIA/TIA-568B guidelines.
5. Electronic test results shall be provided to the Owner's project representative for review.
6. Any cable that fails to meet its specified performance characteristics shall be replaced with a new cable and retested.

B. Fiber-Optic Cabling.

1. Test each fiber strand in accordance with manufacturer's published test procedures.
2. Test each fiber strand at dual wavelengths.
 - a. 850 nm and 1300 nm for multimode.
3. Cable performance shall meet or exceed the following performance criteria: multimode - 3.75 dB/km at 850 nm and 1.5 dB/km at 1310 nm.
4. Test each fiber strand with an optical time domain reflectometer (OTDR).
5. The OTDR anomaly resolution shall be within one foot in runs up to 1,000 feet in length.
6. Test all cable segments and patch cords for faulty connectors, splices, and terminations and for the integrity of the cable and its component parts at 850 and 1300 nm multimode.
7. Each connector shall test to a maximum of .1 dB loss.
8. Replace connectors on cables that exceed the .1dB limit and retest.
9. Replace connectors and retest new materials until satisfactory performance is achieved.
10. Use a time domain reflectometer to record transmission characteristics, waveform, and performance of all fiber strands.
11. Use an optical loss test set (OLTS) to measure the optical transmission loss (attenuation) on each optical fiber strand in the system.
12. Electronic test results shall be provided to the Owner's project representative for review.

END OF SECTION 26 0523

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 0526

GROUNDING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install grounding materials in accordance with the plans and as specified herein.
- B. Grounding: This section includes solid grounding of electrical systems and equipment. It includes basic requirements for grounding for protection of life, equipment, circuits, and systems. Grounding requirements specified in this section may be supplemented in other sections of these Specifications.
- C. Applications of electrical grounding and bonding work in this section include the following:
 - 1. Underground metal piping.
 - 2. Underground metal and steel reinforced concrete structures.
 - 3. Electrical power systems.
 - 4. Grounding electrodes.
 - 5. Counterpoise loops.
 - 6. Separately derived systems.
 - 7. Raceways.
 - 8. Service equipment.
 - 9. Enclosures.
 - 10. Equipment.
 - 11. Lighting standards.

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Perform all work to furnish and install grounding in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
 - 1. Electrical Code Compliance: Comply with applicable local electrical code requirements of the authority having jurisdiction, and National Electrical Code (NEC) as applicable to electrical grounding and bonding, pertaining to systems, circuits and equipment. Use of conduit system for ground conductor shall not be allowed.
 - 2. Underwriters' Laboratories, Inc. (UL) Compliance: Comply with applicable requirements of UL Standards Nos. 467, "Grounding and Bonding Equipment", and 869 "Reference Standard for Service Equipment", pertaining to grounding and bonding of systems, circuits and equipment. In addition, comply with UL Standard 486A, "Wire Connectors and Soldering Lugs for Use with Copper Conductors". Provide grounding and bonding products which are UL listed and labeled for their intended usage.

3. Institute of Electrical and Electronic Engineers (IEEE) Compliance: Comply with applicable requirements and recommended installation practices of IEEE Standards 80, 81, 141 and 142 pertaining to grounding and bonding of systems, circuits and equipment.

1.4 SUBMITTALS

- A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.
- B. Submittals: Submit the following in accordance with Conditions of Contract and Division 01 specification sections:
 1. Product data for ground rods, connectors and connection materials, and grounding fittings. Field testing organization certificate, signed by the Contractor, certifying that the organization performing field tests complies with the requirements specified in Quality Assurance below.
 2. Report of field tests and observations certified by the testing organization.

1.5 DELIVERY, HANDLING, AND STORAGE

- A. Deliver ground wire properly packaged in factory fabricated type containers, or wound on NEMA specified type wire reels.
- B. Handle grounding wire carefully to avoid abrading, puncturing and tearing wire insulation. Ensure that dielectric resistance of the cable is maintained
- C. Store grounding materials and ground wire in clean dry space in original containers. Protect products from weather damaging fumes, construction debris, and traffic.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Grounding and Bonding Products
 1. Products: Of types indicated and of sizes and ratings to comply with NEC. Where types, sizes, ratings, and quantities indicated are in excess of NEC requirements, the more stringent requirements and the greater size, rating, and quantity indications govern.
 2. Conductor Materials: Copper
- B. Wire and Cable Conductors
 1. General: Comply with Division 26 Section "Wires, Cables and Connectors".
 2. Equipment Grounding Conductor
 - a. Minimum ground wire size for power circuits shall be No. 12 AWG, except where otherwise noted. Wire size No. 8 AWG and larger shall be stranded, and all smaller wires shall be solid, except where otherwise noted.
 - b. Minimum ground wire size for control circuits shall be No. 14 AWG, except where otherwise noted.
 - c. All wire sizes shown on Plan Drawings, Details, and Sketches are based on insulated copper wire based on 60 deg C for circuits 125 amperes and less, and the use of 75 deg C for higher ampere rated circuits.
 - d. Conductors for grounding system shall be soft or medium hard drawn, stranded, bare copper, except where otherwise noted.

3. All conductors buried in ground shall be bare.
4. Grounding Electrode Conductor: Stranded cable
5. Bare Copper Conductors: Conform to the following:
 - a. Solid Conductors: ASTM B-3.
 - b. Assembly of Stranded Conductors: ASTM B-8.
 - c. Tinned Conductors: ASTM B-33.

C. Identification of Ground Conductors

1. Ground conductors shall have conductor identification.
2. Ground conductor identification shall be as called for in the National Electric Code, where covered.
3. Ground conductors larger than No. 6 AWG may be identified by taped color coding at all splices and terminations.
4. Ground conductors No. 6 AWG and smaller shall be color coded.
5. Ground conductor color coding shall be green throughout.
6. Wire markers made of paper tape shall not be used.

D. Miscellaneous Conductors

1. Ground Bus: Bare annealed copper bars of rectangular cross section with 98 percent conductivity, rigidly attach to structure.
2. Braided Bonding Jumpers: Copper tape, braided No. 30 gauge bare copper wire, terminated with copper ferrules.
3. Bonding Strap Conductor/Connectors: Soft copper, 0.05 inch thick and 2 inches wide, except as indicated.

E. Connector Products

1. General: Listed and labeled as grounding connectors for the materials used.
2. Pressure Connectors: High conductivity plated units.
3. Bolted Clamps: Heavy duty units listed for the application.
4. Exothermic Welded Connections: Provided in kit form and selected for the specific types, sizes, and combinations of conductors and other items to be connected.

F. Grounding Electrodes

1. Ground Rods: Copper clad steel with high strength steel core and electrolytic grade copper outer sheath, molten welded to core.
 - a. Size: 3/4 inch by 20 feet.

2.2 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include the following:

1. Anixter Bros., Inc.
2. Bashlin Industries, Inc.
3. Buckingham Mfg. Co.
4. A.B. Chance Co.
5. Dossert Corp.
6. Engineered Products Co.
7. Erico Products, Inc.
8. Galvan Industries, Inc.
9. GB Electrical, Inc.
10. General Machine Products Co., Inc.

11. Hastings Fiber Glass Products, Inc.
12. Ideal Industries, Inc.
13. Kearney-National.
14. McGill Mfg.
15. O-Z/Gedney Co.
16. Raco, Inc.
17. Thomas & Betts Corp.
18. W.H. Salisbury & Co.
19. Utilco Co.

B. Exothermic Weld Connections

1. Cadweld.
2. Therm-O-Weld.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General

1. Ground electrical systems and equipment in accordance with NEC requirements except where the Drawings or Specifications exceed NEC requirements.
2. Ground Rods: Locate a minimum of one rod length from each other and at least the same distance from any other grounding electrode. Interconnect all ground rods with bare conductors buried at least 24 inches below grade. Connect bare cable ground conductors to ground rods by means of exothermic welds. Make these connections without damaging the copper coating or exposing the steel. Drive rods until tops are 2'-6" below finished floor or final grade except as otherwise indicated.
3. Metallic Water Service Pipe: Provide insulated copper ground conductors, sized as indicated, in conduit from the building main service equipment, or the ground bus, to main metallic water service entrances to the building. Connect ground conductors to the main metallic water service pipes by means of ground clamps. Where a dielectric main water fitting is installed, connect the ground conductor to the street side of the fitting. Do not install a grounding jumper around dielectric fittings. Bond the ground conductor conduit to the conductor at each end.
4. Braided Type Bonding Jumpers: Install to connect ground clamps on meter piping to bypass meters electrically. Use elsewhere for flexible bonding and grounding connections.
5. Route grounding conductors along the shortest and straightest paths possible without obstructing access or placing conductors where they may be subjected to strain, impact, or damage, except as indicated.
6. Provide ground rods and ground grid at service entrance equipment as required.
7. Bond the neutral of each transformer to building steel.
8. All underground grounding conductors shall be a minimum of 2'-6" below grade.
9. Provide a ground wire in all feeder circuits.
10. Provide a ground wire in all branch circuit conduits.
11. Where grounding conductors are subject to mechanical injury, they shall be protected by encasement in concrete or installed in a rigid schedule 80 PVC raceway.
12. All connection of ground conductors to ground rods, bus bars, structural members, pipes, or fences and splices of ground conductors shall be made by exothermic welds, except where otherwise noted.
 - a. All connections to bar lugs shall be exothermic weld or compression type.

- b. Bolted type connection of ground conductors may only be made where terminal lugs or blocks have been furnished and installed in equipment by the Manufacturer.
 - c. Prior to the installation of any exothermic weld on connector, all connecting surfaces shall be thoroughly cleaned in accordance with the Manufacturer's recommendations.
 - d. Failure to thoroughly clean connecting surfaces shall constitute justifiable ground to require the Contractor to remove and re-install all similar connections at no expense to the Owner or Engineer.
13. The Contractor shall not allow or cause any connection or splice for the grounding system to be covered up or enclosed until it has been inspected and approved by the Inspecting Authority.
- a. Any connection or splice that is covered up or enclosed before such inspection and approval shall be uncovered at the Contractor's expense.
 - b. After it has been inspected and approved, the Contractor shall cover up or enclose the connection or splice it at his own expense.
14. The resistance to ground for the entire grounding system shall not exceed 25 ohms under normal dry conditions. Tests of grounding resistance shall not be made within 24 hr after a rainfall. If, after testing the system, it is found that the resistance exceeds the specified value, the Contractor shall install the necessary number of ground rods to reduce the resistance to less than the specified value.

B. Connections

1. General: Make connections in such a manner as to minimize possibility of galvanic action or electrolysis. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact will be galvanically compatible.
 - a. Use electroplated or hot tin coated materials to assure high conductivity and make contact points closer in order of galvanic series.
 - b. Make connections with clean bare metal at points of contact.
 - c. Coat and seal connections involving dissimilar metals with inert material such as red lead paint to prevent future penetration of moisture to contact surfaces.
2. Exothermic Welded Connections: Use for connections to structural steel, connections to ground rods, and for all underground connections. Install at connections to ground rods. Comply with manufacturer's written recommendations. Welds that are puffed up or that show convex surfaces indicating improper cleaning are not acceptable.
3. Terminate insulated equipment grounding conductors for feeders and branch circuits with pressure type grounding lugs. Where metallic raceways terminate at metallic housings without mechanical and electrical connection to the housing, terminate each conduit with a grounding bushing. Connect grounding bushings with a bare grounding conductor to the ground bus in the housing. Bond electrically non-continuous conduits at both entrances and exits with grounding bushings and bare grounding conductors.
4. Tighten grounding and bonding connectors and terminals, including screws and bolts, in accordance with manufacturer's published torque tightening values for connectors and bolts. Where manufacturer's torquing requirements are not indicated, tighten connections to comply with torque tightening values specified in UL 486A and UL 486B.
5. Compression Type Connections: Use hydraulic compression tools to provide the correct circumferential pressure for compression connectors. Use tools and dies recommended by the manufacturer of the connectors. Provide embossing die code or other standard method to make a visible indication that a connector has been adequately compressed on the ground conductor.

6. **Moisture Protection:** Where insulated ground conductors are connected to ground rods or ground buses, insulate the entire area of the connection and seal against moisture penetration of the insulation and cable.
- C. **Underground Distribution System Grounding**
1. **Manholes, Handholes, and Underground Pullboxes:** Install a driven ground rod close to the wall and set the rod depth such that 4 inches will extend above the finished floor. Where necessary, install ground rod before the manhole is placed and provide a No. 1 AWG bare tinned copper conductor from the ground rod into the manhole through a waterproof sleeve in the manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure sensitive tape or heat shrunk insulating sleeve from 2 inches above to 6 inches below the concrete. Seal floor opening with waterproof nonshrink grout.
 2. **Connections at Manholes, Handholes, and Underground Pullboxes:** Connect exposed metal parts, such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole to the ground rod or ground conductor. Connect circuit ground wire to ground rod. Make connections with minimum No. 4 AWG stranded hard drawn copper wire. Train conductors plumb or level around corners and fasten to manhole or handhole walls. Connect to cable armor and cable shields by means of tinned terminals soldered to the armor or shield, or as recommended by manufacturer of splicing and termination kits.
 3. **Grounding System:** Ground noncurrent carrying metallic items associated with manholes, substations, and pad mounted equipment by connecting them to bare underground cable and grounding electrodes arranged as indicated.

3.2 APPLICATION

- A. **Equipment Grounding Conductor Application:** Comply with NEC Article 250 for sizes and quantities of equipment grounding conductors, except where larger sizes or more conductors are indicated. Use of conduit system for ground conductor shall not be allowed.
 1. Install separate insulated equipment grounding conductors with circuit conductors for the following in addition to those locations where required by code:
 - a. Feeders and branch circuits.
 2. **Nonmetallic Raceways:** Install an insulated equipment ground conductor in nonmetallic raceways unless they are designated for telephone or data cables.
- B. **Underground Conductors:** Bare, tinned, stranded copper except as otherwise indicated.
- C. Separately derived systems required by NEC to be grounded shall be grounded in accordance with NEC paragraph 250-30.
- D. **Metal Poles Supporting Outdoor Lighting Fixtures:** Ground pole to a grounding electrode as indicated in addition to separate equipment grounding conductor run with supply branch circuit.

3.3 FIELD QUALITY CONTROL

- A. **Independent Testing Organization:** Arrange and pay for the services of a qualified independent electrical testing organization to perform tests described below.
- B. Test the complete station ground system for continuity and for resistance to ground using an electrical ground resistance tester.

- C. Ground test shall be performed only after two days of dry weather. Dry weather is defined as 0.0-inch of precipitation in a 48 hour period.
- D. Use a hand-cranked or motor-driven ground test set by Biddle, or approved equal.
- E. Resistance to ground shall be 5 ohms or less. Drive additional ground rods as required to meet the 5 ohm maximum resistance.
- F. All tests are to be witnessed by the Owner's Representative. Notify the Owner's Representative at least 24 hours in advance of testing.

END OF SECTION 26 0526

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 0529

SUPPORTING DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to work of this Section.
- B. This section is a Division 26 section and is a part of each Division 26 section making reference to electrical supporting devices specified herein.

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install supporting devices in accordance with the plans and as specified herein.
- B. Supports: Types of supports, anchors, sleeves and seals specified in this section include the following:
 - 1. Clevis hangers.
 - 2. Riser clamps.
 - 3. C-clamps.
 - 4. I-beam clamps.
 - 5. One hole conduit straps.
 - 6. Two hole conduit straps.
 - 7. Round steel rods.
 - 8. Lead expansion anchors.
 - 9. Toggle bolts.
 - 10. Wall and floor seals.
 - 11. U-channel strut system.
- C. Supports, anchors, sleeves and seals furnished as part of factory fabricated equipment, are specified as part of that equipment assembly in other divisions and Division 26 sections.

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Perform all work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
 - 1. National Electrical Code (NEC) Compliance: Comply with NEC requirements as applicable to construction and installation of electrical supporting devices.
 - 2. Manufacturer's Standardization Society (MSS) Compliance: Comply with applicable MSS standard requirements pertaining to fabrication and installation practices for pipe hangers and supports.
 - 3. National Electrical Contractors Association (NECA) Compliance: Comply with NECA's "Standard of Installation" pertaining to anchors, fasteners, hangers, supports, and equipment mounting.

4. Underwriters' Laboratories, Inc. (UL) Compliance: Provide electrical components which are UL listed and labeled.
5. Federal Specification (FS) Compliance: Comply with FS FF-S-760 pertaining to retaining straps for conduit, pipe and cable.

1.4 DEFINITIONS

- A. Abbreviations
 1. PVC: Polyvinyl chloride.
- B. Finished Locations: The following are defined as finished locations:
 1. Areas with carpet or tile floors.
 2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
 3. Areas with tiled, plastered, or paneled walls.
- C. Interior Locations: The following are defined as interior locations:
 1. Any location within the boundaries of the foundation of any building.
 2. Any location within the superstructure of other structures not classified as buildings.
- D. Wet Locations: The following are defined as wet locations:
 1. All exterior locations.
 2. All interior locations below grade.
 3. All interior locations where wet materials are processed, pumped, transported, or stored.
- E. Corrosive Locations: The following are defined as corrosive locations.
 1. All locations with chemical feed/transfer equipment
 2. All locations with chemical storage tanks
 3. All locations where chemical storage drums are located.
- F. Hazardous (classified) Locations: The following are defined as hazardous (classified) locations.
 1. All hazardous (classified) locations and their hazard classification are shown.

1.5 SUBMITTALS

- A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.
- B. Submit the following in accordance with Conditions of Contract and Division 01 specification sections:
 1. Product data for the U-channel strut system.

1.6 DELIVERY, HANDLING, AND STORAGE

- A. Deliver supporting devices properly packaged in factory fabricated type container.
- B. Store supporting devices in clean dry space in original containers. Protect products from weather damaging fumes, construction debris and traffic.
- C. Handle supporting devices carefully to avoid damage.

PART 2 - PRODUCTS

2.1 MANUFACTURED SUPPORTING DEVICES

- A. Raceway Supports: Products shall include but are not limited to the following:
1. Materials
 - a. Corrosive locations. Type 316 stainless steel or PVC coated galvanized steel.
 - b. Exterior locations. Type 316 stainless steel.
 - c. All other locations. Steel or malleable iron, electro-galvanized.
 2. Clevis Hangers: For supporting rigid metal conduit.
 - a. 3/8-inch rod for 2 inch and smaller conduit.
 - b. 1/2-inch rod for 2 1/2 inch and larger conduit.
 3. Threaded Rod: 1/2-inch minimum size except as stated in 1 above with hexagon nuts.
 4. Beam Clamp: With 1/4-inch tapped side and back holes for attachment of conduit clamps.
 5. Swivel Beam Clamp: Swivel eye hook, closed in the installed position, swivel eye tapped for the threaded rod, and jamb nut.
 6. One-Hole Conduit Straps: One hole.
 7. Clamp Backs: For use with one hole conduit strap to support conduit away from wall or ceiling surface.
 8. Conduit Hangers: For hanging conduit from beam clamps, 1/4-20 closure bolt and square nut, hole for 1/2-13 threaded rod.
 9. Conduit Spacers: Nonmetallic spacers to support conduit and maintain spacing during concrete pours.
 10. Manufacturers: Subject to compliance with requirements, available manufacturers include, but are not limited to, the following:
 - a. Appleton.
 - b. Cal Conduit Products.
 - c. Cantex, Inc.
 - d. Carlon.
 - e. Cooper B-line
 - f. Crouse-Hinds.
 - g. Gibson Stainless and Specialty, Inc.
 - h. Killark.
 - i. Occidental Coating Co.
 - j. Raco, Inc.
 - k. Robroy.
 - l. Thomas & Betts Corp.
- B. Cable and Cord Supports
1. External Cable Grips
 - a. For flexible cords and cables longer than 6 feet and steel support wire.
 - b. Lace type split wire mesh.
 - c. Single or double weave as required to support the load with a safety factor of 10 times the supported load.
 - d. Type 302/304 stainless steel
 2. Manufacturers: Subject to compliance with requirements, available manufacturers include, but are not limited to, the following:
 - a. B-Line Systems.
 - b. Condux International, Inc.
 - c. Kellems, Division of Hubbell, Inc.

- d. O-Z/Gedney.
- e. Pass & Seymour/Legrand.
- f. Red Seal Electric Co.

2.2 U-CHANNEL STRUT SYSTEMS

A. General

- 1. Provide equipment that is listed and labeled.
- 2. U-channel
- 3. Materials
 - a. Corrosive locations: Type 316 stainless steel.
 - b. Exterior locations: Type 316 stainless steel.
 - c. All other locations: Cold rolled steel, ASTM A570, grade 33, 12 gauge, hot dip galvanized after fabrication.
- 4. Outside dimensions of 1-5/8 inch x 1-5/8 inch, unless otherwise noted.
- 5. Holes, 9/16 inch diameter at 1-7/8 inch on center, unless otherwise noted.
- 6. Provide spring nuts, clamps, hangers, and hardware made of the same materials at the U-channel.

B. Manufacturers: Subject to compliance with requirements, available manufacturers include, but are not limited to, the following:

- 1. Cooper/B-Line.
- 2. Gibson Stainless and Speciality, Inc.
- 3. Kindorf/Thomas & Betts.
- 4. Seasafe, Inc.
- 5. Unistrut Corporation.

2.3 FABRICATED SUPPORTS

A. General.

- 1. Constructed of individual structural shapes or assemblies of structural shapes welded together to form a complete, secure, and durable assembly.
- 2. Structural tubing, angles, channels, or W-shapes as shown on the drawings or required to support equipment or systems.
- 3. Size support members to perform their support functions without deflection of more than one half percent of total height for vertical members and 1 percent of total span for other than vertical members.
- 4. Materials
 - a. Corrosive locations: Type 316 stainless steel.
 - b. Exterior locations: Type 316 stainless steel.
 - c. All other locations: Cold rolled steel, ASTM A 36 hot dip galvanized after fabrication.

B. Fabrication

- 1. Steel: Assemble fabricated supports by full penetration welded connections.
- 2. Ground welds smooth and flush.
- 3. Wire brush areas around welds to remove slag and spall.

2.4 WALL AND FLOOR SEALS

- A. General: Provide seals around conduits that penetrate below grade or water-bearing concrete walls and floors.
- B. Wall Opening
 - 1. New Walls: Molded non-metallic high density polyethylene sleeves with integral water stop and end caps to prevent deformation during concrete pour.
 - 2. Existing Walls: Core drilled hole, size as recommended by seal manufacturer.
- C. Modular seal.
 - 1. Inter-locking synthetic rubber links shaped to fill the annular space between the conduit and the wall opening.
 - 2. Glass reinforced nylon polymer pressure plates.
 - 3. Type 316 stainless steel bolts and flange hex nuts.
- D. Manufacturers: Subject to compliance with requirements, available manufacturers include, but are not limited to, the following:
 - 1. PSI-Thunderline/Link-Seal.
 - 2. Or approved equal.

2.5 FIRE-STOPS

- A. General
 - 1. Provide fire-stops around any electrical work penetrating fire rated walls, floors, or ceilings.
 - 2. Provide fire-stops that conform to the following:
 - a. UL Standard 1479, "Penetration Fire-stop Systems."
 - b. UL Standard 263, "Fire Tests of Building Construction and Materials."
- B. Busway, Cable Tray, Armored Cable, and Conduit Penetration Fire-Stopping
 - 1. Provide expanding foam or elastomeric putty or pillows to fire-stop penetrations in fire rated assemblies.
 - a. RTV Foam
 - 1) Dow Corning 3-6548 Silicone RTV Foam.
 - 2) 3M Fire Barrier 2001 Silicone RTV Foam.
 - b. Elastomeric Putty
 - 1) 3M Fire Barrier 2000 (nonslump).
 - 2) 3M Fire Barrier 2003 (self-leveling).
 - 3) Nelson CLK N/S (nonsag).
 - 4) Nelson CLK S/L (self-leveling).
 - 2. Provide fire resistive panels on both sides of the fire barrier penetration if required to obtain the necessary fire resistance rating or to provide a cofferdam to restrain the sealant material during the installation and curing process.
 - a. 3M Fire Barrier CS-195+.
 - b. Nelson CPS.
 - c. Or approved equal.

2.6 ANCHORS AND FASTENERS

A. General

1. Provide anchors and fasteners, including bolts, nuts, washers of types, sizes and materials indicated.
2. Materials
 - a. Corrosive locations: Stainless steel.
 - b. Exterior locations: Stainless steel.
 - c. All other locations: Galvanized steel.
3. Anchors for securing 3/4 or 1 inch conduit straps and device boxes to sound concrete walls and ceilings shall be self-tapping anchors, similar and equal to Hilti Kwik-Con II or ITW Buildex Blue Max, 3/16 inch by minimum 1 1/4 inches long, in areas not requiring stainless steel.
4. For anchors for use in securing conduit larger than 1 inch, heavier equipment than device boxes, and all fasteners to be used in areas enumerated above as requiring stainless steel fasteners, provide stud type expansion anchors, drop-in two-piece expansion anchors, or adhesive stud anchors, similar and equal to Hilti Kwik-Bolt II, Hilti HDI Drop-in, or Hilti HVA Adhesive Anchor System.
5. Lead Expansion Anchors: 1/2 inch.
6. Toggle Bolts: Springhead, 3/16 inch x 4 inch.

B. Manufacturers: Subject to compliance with requirements, available manufacturers include, but are not limited to, the following:

1. Ackerman Johnson Fastening Systems Inc.
2. Ideal Industries, Inc.
3. Hilti.
4. Joslyn Manufacturing and Supply Co.
5. ITW Buildex.
6. Ideal Industries, Inc.
7. Rawlplug Co.
8. Star Expansion Co.
9. U.S. Expansion Bolt Co.

PART 3 - EXECUTION

3.1 INSTALLATION OF SUPPORTING DEVICES

- A. Install hangers, anchors, sleeves and seals as indicated, in accordance with manufacturer's written instructions and with recognized industry practices to insure supporting devices comply with requirements. Comply with requirements of NECA and NEC for installation of supporting devices.
- B. Coordinate with other electrical work, including raceway and wiring work, as necessary to interface installation of supporting devices with other work.
- C. Install hangers, supports, clamps and attachments to support piping properly from building structure. Arrange for grouping of parallel runs of horizontal conduits to be supported together on trapeze type hangers where possible. Install supports with spacings indicated and in compliance with NEC requirements.

- D. Install conduit seals for conduit penetrations of slabs on grade and exterior walls below grade and where indicated. Tighten sleeve seal screws until sealing grommets have expanded to form watertight seal. Provide seals for the interior of conduits which penetrate exterior or water bearing walls, consisting of gland type sealing bushings or RTV closed cell silicone foam.

SECTION 26 0533

RACEWAY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes

1. Flexible metal conduit (FMC).
2. Intermediate metal conduit (IMC).
3. Liquid-tight flexible metal conduit (LFMC).
4. Liquid-tight flexible non-metallic conduit (LFNC).
5. PVC coated rigid metal conduit.
6. Rigid aluminum conduit (RAC).
7. Rigid non-metallic conduit (RNC).
8. Surface raceway.
9. Wireway.

B. Related Sections

1. Division 01 section "Submittal Procedures."
2. Division 26 section "Basic Electrical Requirements."
3. Division 26 section "Basic Electrical Materials and Methods."
4. Division 26 section "Grounding."
5. Division 26 section "Supporting Devices."
6. Division 26 section "Electrical Identification."
7. Division 31 section "Excavation and Fill."

1.3 REFERENCES

- A. Unless otherwise stated, references are to the latest edition of the standard.

B. American National Standards Institute (ANSI)

1.4 DEFINITIONS

- A. Abbreviations
1. AHJ: Authority having jurisdiction.
 2. NRTL: Nationally recognized testing laboratory.
 3. PVC: Polyvinyl chloride.
- B. Finished Locations: The following are defined as finished locations:
1. Areas with carpet or tile floors.
 2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
 3. Areas with tiled, plastered, or paneled walls.
- C. Interior Locations: The following are defined as interior locations:
1. Any location within the boundaries of the foundation of any building.
 2. Any location within the superstructure of other structures not classified as buildings.
- D. Wet Locations: The following are defined as wet locations:
1. All exterior locations.
 2. All interior locations below grade.
 3. All interior locations where wet materials are processed, pumped, transported, or stored.
- E. Corrosive Locations: The following are defined as corrosive locations.
1. All locations with chemical feed/transfer equipment
 2. All locations with chemical storage tanks
 3. All locations where chemical storage drums are located.
- F. Hazardous (Classified) Locations: The following are defined as hazardous (classified) locations.
1. All hazardous (classified) locations and their hazard classification are shown.

1.5 SUBMITTALS

- A. General
 - 1. Comply with the requirements of Division 01 Section “Submittal Procedures”.
 - 2. Submit information as described below.
 - 3. Provide all information necessary to determine compliance with the plans and specifications.
 - 4. Identify all products submitted as substitutions.
- B. Product Data
 - 1. Manufacturer’s technical product data sheets for all products specified in this section.
 - 2. Delete or cross out all inappropriate or non-applicable information.
- C. Shop Drawings
 - 1. Materials list. Submit a list with quantities, manufacturer’s name, and catalog numbers.
 - 2. Dimensional drawings. Submit dimensional drawings for all products.
 - 3. Mounting details.
 - 4. Wiring diagrams: Submit wiring diagrams for all products.
 - a. Show all components and features specified.
 - b. Differentiate between factory and field installed wiring and components.
- D. Samples
- E. Quality Control Submittals
 - 1. Test Reports
 - a. Field test report. Submit certified copies of the field test reports.

1.6 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with the following:
 - 1. All applicable federal, state, and local codes and regulatory requirements.
 - 2. National Electrical Code (NEC).

1.7 DELIVERY, STORAGE, AND HANDLING

- A. General: Comply with Division 1 Product Requirements Sections.
- B. Packing and shipping
 - 1. Package equipment as required to prevent damage during shipment.
 - 2. Mount heavy items on pallets or skids to facilitate handling.
- C. Storage and protection
 - 1. Store the products until they can be installed.
 - 2. Meet the storage requirements of the manufacturer.

1.8 PROJECT/SITE CONDITIONS

- A. Field Measurements: Field verify all locations and dimensions.

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

- A. General
 - 1. Provide new and unused products of current manufacture.
 - 2. Provide products free from defects affecting performance.
- B. Listing and Labeling
 - 1. Provide UL listed and labeled products.
 - 2. Provide products listed and labeled by an approved independent NRTL.
 - 3. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.

2.2 CONDUITS

- A. Minimum Conduit Size
 - 1. For Connection to Recessed Lighting Fixtures: 1/2 inch.
 - 2. For Connection to Field Instruments with Only 1/2 Inch Openings or Hubs: 1/2 inch.
 - 3. Duct Banks: 1 inch.
 - 4. All Other Uses: 3/4 inch.
- B. Metal Conduit and Tubing
 - 1. Rigid Aluminum Conduit: Rigid aluminum conduit, threaded type, ANSI C80.5, UL6A.
 - 2. Intermediate Steel Conduit. Intermediate grade, hot dip galvanized, ANSI C80.1, UL 1242.
 - 3. Flexible Metal Conduit. Continuous, spirally wound, interlocked aluminum, UL 1
 - 4. Liquid-tight Flexible Metal Conduit: Continuous, spirally wound, interlocked aluminum, flexible liquid-tight PVC jacket, UL 360.
 - 5. Available Manufacturers: Subject to compliance, metal conduit manufacturers include, but are not limited to:
 - a. AFC.
 - b. Alflex Corp.
 - c. Allied Tube and Conduit.
 - d. Alumax.
 - e. Electri-Flex Company.
 - f. LTV Steel Tubular Products Co.
 - g. Occidental Coating Co.
 - h. Perma-Cote Industries.
 - i. Robroy Industries, Inc.
 - j. Shamrock Conduit Products.
 - k. Tiften Aluminum Co.
 - l. Triangle PWC, Inc.
 - m. VAW of America Inc.
 - n. Wheatland Tube Co.
- C. Nonmetallic Conduit
 - 1. Rigid Nonmetallic Conduit: PVC, Schedule 40, NEMA TC-2, UL 651.
 - 2. Rigid Nonmetallic Conduit (Heavy Wall): PVC, Schedule 80, NEMA TC-2, UL 651.
 - 3. Liquid-tight Flexible Nonmetallic Conduit: Continuous hard PVC spiral encapsulated with flexible PVC, UL 1660.
 - 4. Available Manufacturers: Subject to compliance, non-metallic conduit manufacturers include, but are not limited to:
 - a. Alflex.
 - b. Cantex Industries.
 - c. Carlon.

- d. Certaineed.
- e. Cole Flex-Corp.
- f. Electric-Flex.

2.3 CONDUIT FITTINGS AND ACCESSORIES

- A. Conduit Bodies
 - 1. Provide covers and gaskets secured with corrosion resistant screws.
 - 2. Rigid Metal: Threaded aluminum, UL 514B.
 - 3. Hazardous locations. Threaded aluminum approved for hazardous locations as identified on plans.
 - 4. Nonmetallic: PVC, molded solvent weld connector, UL 514B.
- B. Locknuts: Galvanized steel, bonding type with sharp edge for digging into metal, UL 514B, NEMA FB-1. Set screw type grounding terminal where required.
- C. Bushings: Malleable iron, galvanized, integrally molded insulation, UL 514B, NEMA FB-1. Set screw type grounding terminal where required.
- D. Conduit Hub Assemblies: Cast metal, ribbed body with female threads, o-ring gasket, integral conduit nipple with insulated throat, grounding type locknut, UL 514B.
- E. Expansion Fittings
 - 1. Rigid Aluminum Conduit: Aluminum body and sleeve, threaded ends, grounding type, rated for location where required.
 - 2. Rigid Non-Metallic Conduit: PVC body and sleeve, two o-rings, socket connector each end.
- F. Other Fittings
 - 1. Rigid Metal: Threaded aluminum.
 - 2. Liquid-Tight Flexible Metal: Compression type, galvanized steel or malleable iron body, steel ferrule, sealing gland and gasket, insulated throat.
 - 3. Rigid Nonmetallic: PVC, molded solvent weld connector, NEMA TC 3.
 - 4. Liquid-Tight Flexible Nonmetallic: PVC, one piece body, compression ferrule, sealing gland and gasket.
- G. Explosion-Proof Seals: Rated use in Class I, Division 1, Group D atmosphere.
- H. Explosion-proof couplings. Braided wire outer jacket, insulating inner liner, threaded ends, liquid-tight, length as required. Rated for use in Class I, Division 1, Group D hazardous locations.
- I. Conduit Seals
 - 1. Duct Sealing Putty
 - a. Gray pliable mastic.
 - b. Non-shrink, non-hardening and UV resistant.
 - c. Compatible with wire insulation.
 - d. Listed for use with conduit sealing fitting.
 - 2. Mechanical Seals
 - a. Internal sealing bushing.
 - b. Two stainless steel pressure discs

- c. Three stainless steel socket head cap screws
 - d. Neoprene gasket.
 - e. Pressure discs and gasket factory predrilled to match size/quantity of cables.
 - f. Rated to withstand 50 pounds per square inch gauge (psig) water or gas pressure.
3. Expanding foam sealant
 - a. Two part foam that expands in place to fill voids between cables and conduits.
 - b. Compatible with wire/cable insulation.
 - c. Withstands 15 feet of water head.
 4. Expanding Foam Fire Stop Sealant
 - a. Two part silicone foam that expands to fill voids between cables and conduits.
 - b. Compatible with wire/cable insulation.
 - c. Intumescent, listed as a fire barrier.
- J. Available Manufacturers: Subject to compliance, conduit fitting manufacturers include, but are not limited to:
1. Fittings
 - a. Adalet/PLM.
 - b. Appleton Electric.
 - c. Carlon.
 - d. Condux International, Inc.
 - e. Crouse-Hinds.
 - f. Delta Industrial Products.
 - g. Electri-Flex Company.
 - h. Killark Electric Mfg. Co.
 - i. Kraloy Products Co.
 - j. O.Z. Gedney.
 - k. Perma-Cote Industries.
 - l. Racor.
 - m. Robroy Industries.
 - n. Spring City Electrical Mfg. Co.
 - o. Steel City.
 2. Sealants
 - a. 3M.
 - b. Dow.
 - c. Gardner Bender Electrical.
 - d. Panduit.

2.4 WIREWAYS

- A. General Purpose Wireways. NEMA 1 steel, front accessible, totally enclosed with bolted covers. Finished with rust-inhibiting primer and gray baked enamel finish.
- B. Oil-tight Wireways. NEMA 12, oil-tight and dust-tight steel with hinged cover and gasket, external latches, and flanged joints with gaskets. Finished with gray baked enamel inside and outside.
- C. Watertight Wireways. NEMA 4X, watertight, corrosion resistant stainless steel with hinged cover and gasket, screw clamps, and flanged joints with gaskets.
- D. Available Manufacturers. Subject to compliance, wireway manufacturers include, but are not limited to:

1. American Electric.
2. Anchor Electric Co.
3. B-Line Systems, Inc.
4. Circle AW Products.
5. Cross Brothers, Inc.
6. Erickson Electric Equipment Co.
7. GS Metals Corp.
8. Hoffman Engineering Co.
9. Square D Company.
10. Wadsworth Electric Manufacturing Co., Inc.

2.5 SURFACE RACEWAYS

- A. Metal Raceways. [Aluminum] [Galvanized steel] with snap-on covers. 1/8-inch mounting screw, knockouts in base approximately 8 inches on center. Finished with rust-inhibiting primer suitable for painting.
- B. Nonmetallic Raceways. Two piece construction, rigid PVC with matte texture conforming to UL 94.
- C. Available Manufacturers. Subject to compliance, surface raceway manufacturers include, but are not limited to:
 1. Surface Metal Raceway.
 - a. Alrey-Thompson Co., Inc.
 - b. Allied Tube & Conduit.
 - c. American Electric.
 - d. B-Line Systems, Inc.
 - e. Butler Mfg. Co.
 - f. Erickson Electrical Equipment Co.
 - g. GS Metals Corp.
 - h. Haydon Corp.
 - i. Hoffman Engineering Co.
 - j. Isoduct Energy Systems.
 - k. Isotrol Systems.
 - l. Keystone/Rees, Inc.
 - m. SL Industries, Inc.
 - n. Square D Co.
 - o. The Wiremold Co.
 2. Surface Nonmetallic Raceway.
 - a. Anixter Brothers, Inc.
 - b. Hoffman Engineering Co.
 - c. Hubbell, Inc.
 - d. JBC Enterprises, Inc.
 - e. Panduit Corp.
 - f. Premier Telecom Products, Inc.
 - g. Thermotools Co.
 - h. The Wiremold Co.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions:
 - 1. Inspect installed work prior to performing the work of this section.
 - 2. Verify that the project has progressed to a point where this installation may begin.
- B. Material Inspection.
- C. Discrepancies:
 - 1. Immediately notify the Engineer in writing of conditions detrimental to proper completion of the work.
 - 2. Correct all unsatisfactory conditions before proceeding with installation.
 - 3. Resolution must be acceptable to the Engineer.

3.2 RACEWAY APPLICATIONS

- A. Conduit
 - 1. Connections to Motors or Vibrating Equipment
 - a. Hazardous locations: Flexible coupling rated for the area.
 - b. Corrosive locations: Liquid-tight flexible non-metallic conduit, 18 inch maximum length.
 - c. Wet locations: Liquid-tight flexible metal conduit, 18 inch maximum length.
 - d. All other locations: Liquid-tight flexible metal conduit, 18 inch maximum length.
 - 2. Concealed in Walls and Fixed Ceilings
 - a. Hazardous locations: Do not conceal conduits.
 - b. Corrosive locations: Do not conceal conduits.
 - c. Wet locations: Do not conceal conduits.
 - d. Finished locations: Rigid aluminum conduit.
 - e. All other locations: Do not conceal conduits.
 - 3. Concealed in Accessible Floors and Ceilings
 - a. Finished locations: Rigid aluminum conduit.
 - b. Connections to lighting fixtures: Flexible metal conduit, 6 feet maximum length.
 - c. All other locations: Rigid aluminum conduit.
 - 4. Concealed in Concrete
 - a. Hazardous locations: Schedule 40 PVC conduit.
 - b. Corrosive locations: Schedule 40 PVC conduit.
 - c. Wet locations: Schedule 40 PVC conduit.
 - d. Transitions from concealed in concrete to exposed: Schedule 80 PVC conduit.
 - e. All other locations: Schedule 40 PVC conduit.
 - 5. Exposed
 - a. Hazardous locations: Rigid aluminum conduit.
 - b. Corrosive locations: Schedule 80 PVC conduit.
 - c. Wet locations: Rigid aluminum conduit.
 - d. Finished locations: Do not expose conduits in finished areas.
 - e. All other locations: Rigid aluminum conduit.
 - 6. Underground
 - a. Direct buried: Schedule 80 PVC conduit
 - b. Concrete encased: Schedule 40 PVC conduit.
 - c. Transitions from underground to exposed: PVC coated RMC.
- B. Fittings
 - 1. Use threaded fittings and conduit bodies for rigid aluminum conduit.
 - 2. Use reducing couplings or bushings for transitions between conduit sizes.

- C. Conduit Seals
 1. Use hazardous location sealing fitting where required by the NEC.
 2. Use expanding foam fire stop sealant in fire rated wall, floor, and ceilings.
 3. Use mechanical seals in exterior below grade walls, floors, and ceilings.
 4. Use expanding foam sealant for all other conduit seals.
- D. Wireways
 1. Finished locations: Do not use wireways in finished locations.
 2. All other locations: Use NEMA 4X wireways.
- E. Surface raceway:
 1. Use only where shown.

3.3 PREPARATION

- A. Surface Preparation
 1. Carefully lay out the work in advance.
 2. Perform all cutting, drilling, etc. without damaging the building surfaces or equipment.
- B. Rough-in
 1. Refer to equipment submittals for rough-in requirements.
 2. Verify rough-in locations by field measurements.
 3. Maintain all manufacturer recommended clearances.

3.4 CONDUIT INSTALLATION

- A. General
 1. Install raceways in accordance with the following:
 - a. Manufacturer's written installation instructions
 - b. NECA 1, NEC, and UL
 2. Remove and replace the damaged raceways with new undamaged material.
 3. Install plumb and level.
 4. Install complete runs before pulling in cables or wires.
 5. Cap all conduits after installation with factory made closures.
 6. Install pull rope in all spare or empty conduits.
 7. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength.
 8. Make pull-line continuous from outlet to outlet, with two feet of slack at each outlet.
 9. Embed the ends in duct sealing compound.
 10. Provide enough slack in flexible conduits to facilitate maintenance of equipment.
 11. Limit bends between pull points to no more than 4 bends totaling 360 degrees.
- B. Field fabrication and assembly
 1. General
 - a. Make all bends with standard conduit bending tools and machines.
 - b. Do not to distort or vary the internal diameter when field bending.
 - c. Keep legs of bends in the same plane.
 - d. Keep straight legs of offsets parallel, unless otherwise indicated.
 - e. Make couplings and connections watertight.
 - f. Remove and replace dented or deformed conduit with new undamaged material.
 - g. Cut conduits straight
 - h. Ream cut ends to remove burrs.

2. Rigid Aluminum Conduit
 - a. Ream cut ends before threading.
 - b. Do not use running threads at conduit joints and terminations.
 - c. Clean the threads and conduit interior with a degreasing spray.
3. PVC Coated RMC
 - a. General
 - 1) Follow general conduit installation requirements except as modified below.
 - 2) Follow the manufacturer's recommended installation procedures.
 - 3) Protect PVC coating on conduit and fittings from damage prior to and during the Work.
 - b. Cutting and threading.
 - 1) Cut conduit using only roller cutters.
 - 2) Replace pipe vise jaws with jaws designed for use with PVC coated conduit.
 - 3) Use power drive unit inserts designed for use with PVC coated conduit.
 - 4) Use half shell conduit clamps in chain vises.
 - 5) Machine threading tool stationary guide to accommodate the PVC coating.
 - 6) Make longitudinal release cuts in the PVC coating before threading.
 - 7) Clean the threads and conduit interior with a degreasing spray.
 - 8) Apply touchup compound to any unprotected metal.
 - c. Bending
 - 1) Use bending shoes specifically designed for PVC coated conduit in mechanical bending equipment.
 - 2) Use shoes one size larger than the size of the conduit when hand bending.
 - 3) Use bending hickies that have a PVC coating.
 - d. Assembly
 - 1) Use strap wrenches or wide jaw pliers designed for PVC coated conduit.
 - 2) Use nut drivers for encapsulated fasteners on conduit body and enclosure covers.
 - e. Repair and replacement
 - 1) If PVC coating of conduit or fittings is damaged during installation, remove and replace with new undamaged materials.
 - 2) Repair minor scratches or damage in PVC coating with touchup compound where allowed by the Owner's representative.
4. Rigid Nonmetallic Conduit
 - a. Solvent weld all joints in PVC conduit to provide a watertight seal.
 - b. Provide a seal that maintains pressure of 25 pounds per square inch for 1 hour.

C. Routing

1. General.
 - a. Locations are approximate unless dimensioned.
 - b. Install exposed conduits parallel or perpendicular to walls, ceilings, or structural members.
 - c. Run parallel or banked raceways together on common supports where practical.
 - d. Make bends in parallel or banked runs from same center line.
 - e. Use factory elbows only where elbows can be installed parallel; otherwise, provide field bends for parallel raceways.
 - f. Avoid conflicts with equipment and building components.
 - g. Do not run through structural members.
 - h. Avoid horizontal runs within partitions or walls.
 - i. Align raceways to enter boxes and cabinets squarely.
 - j. Avoid ceiling inserts, lights, or ventilation ducts or outlets.

- k. Do not run across pipe shafts or ventilation duct openings
 - l. Maintain 6 inches of separation to parallel runs of flues and other heat sources.
 - m. Install horizontal runs above water and steam piping wherever possible.
 - n. Install horizontal runs close to ceilings or beams.
 - o. Do not encroach into the head room of walkways and doors.
 - p. Do not install within fume/vent hoods except where serving the fume/vent hood.
 - q. Provide a low point in conduit runs before entering boxes/enclosures.
 - r. Install a tee conduit fitting and drain/breather at the low point.
 - s. Enter the bottom of boxes/enclosures located in wet, hazardous, or corrosive areas.
2. Finished Areas
 - a. Conceal in walls, slabs, or ceilings.
 - b. In existing areas, conceal in walls of stud construction and above suspended ceilings.
 3. Installed in Concrete
 - a. Install in concrete only where specifically shown or specified.
 - b. Do not install in waterproofed or water-bearing walls.
 - c. Do not install through concrete beams.
 - d. Do not install in concrete that is less than 3 inches thick.
 - e. Do not install in concrete with a thickness less than 3 times the conduit diameter.
 - f. Do not install between the reinforcing steel and the surface of the concrete.
 - g. Space parallel runs at twice the diameter of the largest conduit, center to center.
 - h. Do not cross conduits in slabs unless reviewed by the Engineer/Architect for proper cover.
 - i. Make transitions from embedded to exposed with a metal conduit extending 1 inch into concrete.
 4. Other Interior Areas
 - a. Where equipment is more than 3 feet from walls, run in or under the floor and stub up.
 - b. Run all other interior conduits exposed.
 5. Exposed Exterior
 - a. Do not run exposed on the exterior surface of buildings.
 - b. Do not run across access openings in handrail.
 - c. Do not run on the inside walls of tanks.
 6. Underground Conduits
 - a. Encase all underground conduits in concrete unless otherwise noted.
 - b. Where noted as direct buried, provide 6 inches of sand above and below conduits.
 - c. Depth below finished grade to top of underground conduits.
 - 1) Circuits less than or equal to 600 Volts. 24 inches.
 - 2) Circuits greater than 600 Volts. 36 inches.
 - d. Provide excavation and backfill as specified in Division 31 Section, "Excavation and Fill".
 - e. Make all changes of direction with bends of 30 inch radius minimum.
 - f. Space conduits 7.5 inches center to center both horizontally and vertically.
 - g. Slope away from buildings with a minimum pitch of 3 inches per 100 feet.
 - h. Mark underground conduit runs as specified in Section 260553, Electrical Identification.
 - i. Provide reinforcing steel for 5 feet beyond excavation where conduits cross back-filled areas.
 - j. Run parallel to plant coordinate axes when outside of structures and underground, unless otherwise shown.

D. Supports

1. Support all conduits as specified in Section 260529, Supporting Devices.
2. Support all conduits entering structures as shown on the Drawings.
3. Use only products listed as conduit supports.
4. Do not attach any parts of the conduit system to ventilation ducts.
5. Attached conduit supports to the building.
6. Support conduits on each side of bends.
7. Support conduits at a spacing not to exceed the following:
 - a. Six feet for conduits smaller than 1-1/4 inches
 - b. Eight feet for conduits 1-1/4 inches and larger.
8. Use waterproof cement to set conduit anchors in water bearing or waterproofed walls.
9. Securely anchor underground conduits to prevent movement during placement of concrete or backfill.
10. Secure embedded raceways to reinforcing rods to prevent sagging or shifting during concrete placement.
11. Use precast separators and heavy gauge wire ties or other approved fasteners.
12. Support conduits independently of suspended ceilings, lighting fixtures.
13. Unless otherwise shown or specified, support conduit independently of process piping, mechanical piping, or mechanical ducts.
14. Support within 1 foot of changes of direction, and entries to boxes or enclosures.

E. Sealing and Penetrations

1. Seal the interior of the following conduits to prevent migration of moisture and gases:
 - a. Conduits passing from warm to cold locations.
 - b. Conduits passing between areas where air pressure differential must be maintained.
 - c. Conduits subject to condensation.
 - d. Conduits passing from the interior to the exterior of a building.
 - e. Conduits penetrating exterior below grade walls, floors, and ceilings.
 - f. Conduits entering any panelboard, switchboard, switchgear, or motor control center.
 - g. Conduits entering any control panel.
 - h. Conduits entering all exterior manholes, handholes, and boxes.
 - i. Empty or spare conduits.
2. Seal the interior of all conduits penetrating fire rated walls, floors, and ceilings.
 - a. Seal penetrations with a fire rated sealant.
 - b. Install fire rated sealants in accordance with manufacturer's instructions.
 - c. Provide a foam depth of at least one conduit trade size.
3. Conduit Stub-Ups
 - a. Protect stub-ups from damage where conduits rise through floor slabs.
 - b. Arrange stub-ups so curved portion of bends are not visible above the finished slab.
 - c. Terminate stub-ups that are more than 6 inches from a wall with a threaded metal coupling and plug installed flush with the floor.
 - d. Terminate all other stub-ups with a threaded cap or a bushing and penny.
4. Provide wall and floor seals at conduit penetrations as specified in Section 260529, Supporting Devices.
5. Roofs:
 - a. Penetrate roofs only where specifically shown in the Contract Documents.
 - b. Provide penetrations that meet the requirements of Division 07, Thermal and Moisture Protection.

F. Grounding

1. Mechanically assemble metal raceways to form a continuous effective grounding path.
2. Ensure that terminations at boxes and enclosures provide an effective ground connection.
3. Provide grounding bushings for the following metallic conduit connections:
 - a. Circuits of more than 100 amperes.
 - b. Connections through concentric, eccentric or oversize knockouts.
 - c. Flexible conduit connections
 - d. Any enclosure entry without an effective electrical connection.
4. Locknut and Bushing Grounding Lugs
 - a. Bond together all lugs within the same box or enclosure with bonding jumpers.
 - b. Bond lugs to the enclosure ground bus where provided.
 - c. If a ground bus is not provided, bond lugs to an enclosure grounding stud or screw.
 - d. For conduit transitions to cable tray, bond bushing ground lug to tray ground clamp.
5. Size bonding jumpers in accordance with NEC table 250.102.
6. Apply approved conductive joint compound to mating surfaces of all grounding connections.

G. Painting and Coating

1. Coat all field cuts and threads with brush applied cold process galvanizing, ASTM A 780.
2. Coat aluminum conduits with a dielectric isolating compound where installed in contact with reinforced concrete.

H. Identification: Identify conduits as required in Division 26 Section “Electrical Identification”.

3.5 CONDUIT FITTING INSTALLATION

A. General

1. Join with fittings designed and approved for that purpose.
2. Make-up couplings, fittings, and locknuts wrench-tight.
3. Install locknuts with dished side against box.
4. Use approved conductive thread compounds on all threaded connections.
5. Install a bushing on all conduit ends.
6. Provide a tee fitting with drain/breather at all low points.
7. Terminate Rigid Aluminum Conduit at NEMA 1 and NEMA 12 boxes and enclosures with two locknuts, one inside and one outside, and a bushing.
8. Terminate Rigid Aluminum Conduit at NEMA 3R, NEMA 4, NEMA 4X boxes and enclosures with conduit hub assemblies or in integral hubs where available.

B. Hazardous Locations

1. Provide sealing fittings where required by the NEC.
2. Follow the installation instructions of the manufacturer.

C. Expansion Fittings

1. Provide expansion fittings wherever structural expansion joints are crossed.
2. Provide expansion fittings for every 200 feet of linear run.
3. Provide expansion and deflection couplings wherever shown.
4. Install expansion fittings within one foot to five feet of structural expansion joint.
5. Do not use expansion fittings to compensate for misalignment of conduits.
6. Seismic Areas:
 - a. Provide a rigidly attached junction box on each side of structural expansion joints.

- b. Connect junction boxes with flexible conduit and provide 15 inches of slack.

3.6 WIREWAY AND SURFACE RACEWAY INSTALLATION

A. General:

1. Install in accordance with the following:
 - a. Manufacturer's written installation instructions
 - b. NECA 1, NEC, and UL.
2. Install only where shown.
3. Install plumb and level.
4. Install parallel or perpendicular to wall, floors, ceilings, or structural members.
5. Mechanically assemble to form continuous electrical conductor.
6. Support as specified in Division 26 section "Supporting Devices."

B. Rough-in dimensions:

1. Use dimensions for utilization equipment that are provided in the submittals.
2. Maintain all manufacturer recommended clearances.
3. Install only after the locations clear with other trades.

C. Supporting: Support as specified in Division 26 section "Supporting Devices."

3.7 FIELD QUALITY CONTROL

A. Check alignment and condition of conduits:

1. Pull a mandrel and swab through every completed conduit run.
2. Use an iron shot mandrel:
 - a. Mandrel diameter: 1/4 inch less than nominal conduit size
 - b. Mandrel length: Equal to the conduit diameter.
 - c. Gasket diameter: Slightly larger than the conduit opening.
3. Draw mandrel through without mechanical assistance.
4. If obstructions are encountered that cannot be removed, correct or replace conduit.

B. Test Nonmetallic Conduits for Leaks

1. Test conduits after conduit run is complete and cemented joints are set.
2. Conduct test as recommended by manufacturer.
3. Exercise caution, low-pressure air can cause high thrust loads.

C. Notify the Engineer for inspection and sign-off of the following installations:

1. Conduits to be direct buried: Notify the Engineer prior to covering.
2. Conduits to be embedded in concrete: Notify the Engineer prior to pouring concrete.
3. Document when each conduit is tested and cleaned and submit test report.

3.8 CLEANING

A. Conduits

1. Pull a stiff brush through each conduit until it is clear of foreign materials.
2. Clean existing ducts used for new cable in the same manner as noted above.

B. Wireways: Remove any dirt or debris from wireways before installing wiring.

END OF SECTION 26 0533

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 0553

ELECTRICAL IDENTIFICATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to perform the work in accordance with the plans and as specified herein.
- B. This section includes identification of electrical materials, equipment, and installations. It includes requirements for electrical identification components including, but not limited to, the following:
 - 1. Buried electrical line warnings.
 - 2. Identification labeling for raceways, cables, and conductors.
 - 3. Operational instruction signs.
 - 4. Warning and caution signs.
 - 5. Equipment labels and signs.

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Perform all work associated with electrical identification in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
- B. Electrical Component Standard: Components and installation shall comply with National Fire Protection Association (NFPA) 70 "National Electrical Code (NEC)."
- C. American National Standards Institute (ANSI) Compliance: Comply with requirements of ANSI Standard A13.1, "Scheme for the Identification of Piping Systems," with regard to type and size of lettering for raceway and cable labels.

1.4 DEFINITIONS

- A. Abbreviations
 - 1. AHJ: Authority having jurisdiction.

1.5 SUBMITTALS

- A. General: Furnish manufacturer's product data, test reports, and materials certifications as required
- B. Provide submittal for approval of format, descriptions, and contents prior to fabrication.

- C. Submit the following in accordance with Conditions of Contract and Division 01 specification sections:
 - 1. Product data for each type of product specified.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Box, Conduit, and Raceway Identification
 - 1. Adhesive Labels: Preprinted, flexible, self-adhesive orange vinyl labels with black legend. Legend covered with clear weather and chemical resistant coating.
 - 2. Plastic Sleeves: Preprinted, pretensioned, snap-on, flexible, wraparound plastic sleeves with black legend. Sized to fit conduit diameter.
 - 3. Plasticized Card Stock Tags: Vinyl cloth with preprinted and field printed legends. Orange background, except as otherwise indicated, with eyelet for fastener.
 - 4. Buried Line Warning Tape: Permanent, bright colored, continuous printed, plastic warning tape not less than 6 inches wide by 4 mils thick with continuous metallic strip or core. Printed legend indicative of general type of underground line below.
- B. Wire and Cable Identification
 - 1. Colored Marking Tape: Self-adhesive vinyl tape not less than 7 mils thick and 3/4 inch wide.
 - 2. Wire Labels: Self-adhesive wraparound labels with clear heat shrinkable jacket or permanent plastic heat shrinkable labels. Preprinted legends.
- C. Nameplates and Signs
 - 1. Laminated Plastic: Engraving stock plastic laminate, 1/16 inch minimum thick for signs up to 20 square inches, or 8 inches in length; 1/8 inch thick for larger sizes. Engrave legend in black letters on white face unless otherwise noted and punched for mechanical fasteners.
 - 2. Metal Backed Butyrate: Weather resistant, nonfading, preprinted cellulose acetate butyrate signs with 20 gauge, galvanized steel backing, with colors, legend, and size appropriate to the location. Provide 1/4 inch grommets in corners for mounting.
 - 3. Brass or Aluminum Tags: Metal tags with stamped legend, punched for fasteners. Dimensions: 2 inches by 2 inches by 19 gauge.
- D. Accessories
 - 1. Fasteners: Self-tapping stainless steel screws or number 10/32 stainless steel machine screws with nuts and flat and lock washers.
 - 2. Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking nylon cable ties, 0.18 inch minimum width, 50 pound minimum tensile strength, and suitable for a temperature range from minus 40 degrees Fahrenheit (° F.) to 185° F. Provide ties in specified colors when used for color coding.

2.2 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to, the following:
 - 1. American Labelmark Co.; Labelmaster Subsidiary
 - 2. Brady USA, Inc.; Industrial Products Div.
 - 3. Calpico, Inc.

4. Carlton Industries, Inc.
5. Champion American, Inc.
6. Cole-Flex Corp.
7. D&G Sign and Label.
8. Emed Co., Inc.
9. George-Ingraham Corp. (The)
10. Grimco, Inc.
11. Ideal Industries, Inc.
12. Kraftbilt.
13. LEM Products, Inc.
14. Markal Corp.
15. National Band and Tag Co.
16. Panduit Corp.
17. Radar Engineers.
18. Ready Made Sign Co.; Cornerstone Direct Corp. Div.
19. Seton Name Plate Co.
20. Standard Signs, Inc.
21. W. H. Brady, Co.

PART 3 - EXECUTION

3.1 APPLICATIONS

- A. Conduits
 1. Underground Lines: Identify with warning tape in trench above conduits.
- B. Boxes
 1. Code Required Caution Signs: Self-adhesive labels indicating system voltage. Install on outside of box cover.
 2. Circuit Identification: Self-adhesive labels indicating contained circuits.
- C. Wires and Cables
 1. Color Coding
 - a. Color code service, feeder, and branch circuit conductors as follows:

208/120 Volts	Phase	480/277 Volts
Black	A	Brown
Red	B	Orange*
Blue	C	Yellow
White	Neutral	White
Green	Ground	Green

*Where not permitted by inspecting authority, use purple.

- b. Use conductors with color factory applied for sizes No. 8 AWG and smaller.
- c. Use colored marking tape for sizes larger than No. 8 AWG. Apply for a distance of 6 inches from terminal points and in boxes where splices or taps are made.
- 2. Circuit Identification: Use aluminum wraparound marker bands to identify feeders and branch circuits in manholes, handholes, and pull boxes.
- 3. Conductor Labeling: Use wire labels to identify conductors as follows:
 - a. Conductors indicated to be for future connection or connection under another contract with identification indicating source and circuit numbers.
 - b. Where multiple branch circuits or control wiring or communications/signal conductors are present in the same box or enclosure (except for three circuit, four wire home runs), label each conductor or cable. Provide legend indicating source, voltage, circuit number, and phase for branch circuit wiring. Phase and voltage of branch circuit wiring may be indicated by means of coded color of conductor insulation.
 - c. Label all control, communication, signal, and metering conductors with wire numbers matching the numbers on the approved shop drawings from the system integrator.
 - d. Match identification markings with designations used in panelboards, shop drawings, Contract Documents, and similar previously established identification schemes for the facility's electrical installations.
 - e. Provide securely attached nameplates identifying all ground buses. Provide securely attached nametags to each accessible termination, attachment, or bonding location for each equipment grounding conductor, grounding electrode conductor, and bonding conductor.

D. Signs

- 1. Install warning, caution, or instruction signs where required by NEC, where indicated, or where reasonably required to ensure safe operation and maintenance of electrical systems and of the items to which they connect. Install engraved plastic laminated instruction signs with approved legend where instructions or explanations are needed for system or equipment operation. Install butyrate signs with metal backing for outdoor items.
- 2. For emergency operating signs, install engraved laminate signs with white legend on red background with minimum 3/8 inch high lettering for emergency instructions on power transfer, load shedding, or other emergency operations.
- 3. Provide code required signs for multiple main switches, for standby power systems, and, where required, for generator ground connection.

E. Nameplates

- 1. General: Provide equipment identification nameplates for each major unit of electrical equipment, including central or master units of each electrical system. This includes communication/signal/alarm systems unless unit is specified with its own self-explanatory identification. Text shall match terminology and numbering of the contract documents and shop drawings.
- 2. Provide 1-1/2 inch high engraved plastic laminated nameplates (2 inches high where two lines of text are required) with 1/2 inch lettering for the following:
 - a. Panelboards, electrical cabinets, and enclosures.
 - b. Switchboards.
 - c. Motor control centers.
 - d. Motor starters.
 - e. Power transfer equipment.
 - f. Contactors.

- g. Transformers.
 - h. Enclosed circuit breakers.
 - i. Disconnect switches.
 - j. Control panels.
3. Provide 5/8 inch high engraved plastic laminated nameplates (1 inch high where two lines of text are required) with 1/4 inch high lettering for individual compartments of the following:
 - a. Switchboards.
 - b. Motor control centers.
 4. Provide 5/8 inch high engraved plastic laminated nameplates (1 inch high where two lines of text are required) with 1/4 inch high lettering for the following:
 - a. Control stations.
 - b. Control devices.
 - c. Light switches.
 5. Install labels at locations indicated and at locations for best convenience of viewing without interference with operation and maintenance of equipment. All code requirements for signage shall be met.

3.2 INSTALLATION

A. General

1. Lettering and Graphics: Coordinate names, abbreviations, colors, and other designations used for electrical identification with corresponding designations specified or indicated. Install numbers, lettering, and colors as approved in submittals and as required by code.
2. Install identification devices in accordance with manufacturer's written instructions and requirements of NEC. Clean surfaces of dust, loose material, and oily films before applying.
3. Sequence of Work: Where identification is to be applied to surfaces that require finish, install identification after completion of finish work.
4. Install labels where indicated or at locations for best viewing without interference with operation and maintenance of equipment.

B. Buried Line Warning Tape: During trench backfilling, for exterior underground power, control, signal, and communications cables and conduits, install continuous underground plastic line marker, located directly above line at 6 to 8 inches below finished grade. Where multiple lines are installed in a common trench or concrete envelope, do not exceed an overall width of 16 inches; install a single line marker.

C. Tape: Apply colored, pressure sensitive plastic tape in half-lapped turns. Apply the last two turns of tape with no tension to prevent possible unwinding. Do not obliterate cable identification markings by taping. Tape locations may be adjusted slightly to prevent such obliteration.

D. Metal Tags: Attach metal tags with one piece self-locking nylon cable ties.

E. Cable Ties: Apply cable ties with a special tool or pliers; tighten for snug fit and cut off excess length.

SECTION 26 0900
CONTROL DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes
 1. Pilot devices (push buttons, pilot lights, etc.).
 2. Elapsed time meters.
 3. Relays and timers.
 4. Intrinsically Safe Relays.
 5. Zener Barriers.
 6. Sensing devices (limit switches, proximity switches, etc.).
 7. Alarms and signals.
- B. Related Sections
 1. Division 01 section, "Submittal Procedures."
 2. Division 01 section, "Operation and Maintenance Data."
 3. Division 26 Section "Electrical Identification".

1.3 REFERENCES

- A. Unless otherwise stated, references are to the latest edition of the standard.
- B. Underwriter's Laboratory (UL)
- C. National Electrical Manufacturers Association (NEMA)
- D. National Fire Protection Association (NFPA)
- E. American National Standards Institute (ANSI)
- F. Institute for Electrical and Electronics Engineers (IEEE)
- G. The Instrumentation, Systems, and Automation Society (ISA)
- H. American Society for Testing and Materials (ASTM)

1.4 DEFINITIONS

- A. Abbreviations
 1. AHJ: Authority having jurisdiction.
 2. DPDT: Double pole double throw.
 3. NRTL: Nationally recognized testing laboratory.

4. SPST: Single pole single throw.
 5. SPDT: Single pole double throw.
- B. Finished Locations: For the purposes of this specification, the following are finished locations:
1. Areas with carpet or tile floors.
 2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
 3. Areas with tiled, plastered, or paneled walls.
- C. Interior Locations: For the purposes of this specification, the following are interior locations:
1. Any location within the boundaries of the foundation of any building.
 2. Any location within the superstructure of other structures not classified as buildings.
- D. Wet Locations: For the purposes of this specification, the following are wet locations:
1. All exterior locations.
 2. All interior locations below grade.
 3. All interior locations where wet materials are processed, pumped, transported, or stored.
- E. Corrosive Locations: For the purposes of this specification, the following are corrosive locations.
1. All locations with chemical feed/transfer equipment, chemical storage tanks, or chemical storage drums are located.
- F. Hazardous (Classified) Locations
1. Hazardous (classified) locations as defined by the NEC.
 2. Hazardous locations and their classification are shown.

1.5 SUBMITTALS

- A. General
1. Comply with the requirements of Division 01 Section “Submittal Procedures”.
 2. Provide all information necessary to determine compliance with the plans and specifications.
- B. Product Data
1. Manufacturer’s technical product data sheets for all products specified in this section.
 2. Delete or cross out all inappropriate or non-applicable information.
- C. Shop Drawings
1. Wiring Diagrams: Submit wiring diagrams for all products.
 - a. Show all components and features specified.
 - b. Differentiate between factory and field installed wiring and components.
- D. Contract Closeout Submittals: Operation and maintenance (O&M) data.

1.6 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with the following:
1. All applicable federal, state, and local codes and regulatory requirements.
 2. National Electrical Code (NEC).

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

A. General

1. Provide new and unused products of current manufacture.
2. Provide products free from defects affecting performance.
3. All units of the same type must be from the same manufacturer.

B. Listing and Labeling

1. Provide UL listed and labeled products.
2. Provide products listed and labeled by an approved independent NRTL.
3. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.

2.2 PILOT DEVICES

A. General

1. Round, heavy-duty, 30.5 mm.
2. NEMA rated equal to enclosure.
3. 5 amp NEMA B600 sealed contacts.
4. Type and quantity of contacts as shown on drawings.

B. Push Buttons

1. Momentary contact.
2. Extended head
3. Color as shown on drawings or specified in other specification sections.

C. Emergency Stop Push Buttons

1. Maintained contact
2. Push/pull operator
3. 2-1/4 inch diameter mushroom head
4. Red.

D. Selector Switches

1. Maintained contact, unless otherwise shown.
2. Number of positions as shown on drawings.

E. Cylinder Lock Operator

1. Push button or selector switch type as shown on drawings.
2. Operable only with key in lock.
3. Provide two keys.

F. Pilot Lights

1. Push-to-test LED type.
2. Lens and lamp color as shown on drawings.

G. Legend Plates

1. Extra large size
2. Engraved laminated plastic
3. Color
 - a. Normal: Black legend on white background
 - b. Emergency stop: Black legend on red background.

- H. Accessories: Provide the following accessories where shown on the drawings.
 - 1. Padlocking Cover. Pad-lockable cover to prevent operation of pilot device.
 - 2. Protective Boot. Flexible plastic designed to prevent entrance of foreign materials.
- I. Available Manufacturers: Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
 - 1. Allen Bradley Company.
 - 2. Cutler Hammer.
 - 3. Square D Company.

2.3 ELAPSED TIME METERS

- A. General: 120 volt, synchronous motor driven, mechanical register indicating up to 99,999.9 hours.
- B. Window Kit: Type 304 stainless steel frame, brushed finish, polycarbonate window, oil resistant gasket, NEMA 4X rated.
- C. Available Manufacturers: Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
 - 1. Cramer Company.
 - 2. Hobbs.
 - 3. Industrial Timer Company.
 - 4. Redington Counters, Inc.
 - 5. Syrelec/Crouset Corporation.
 - 6. Weschler.

2.4 RELAYS AND TIMERS

- A. General Purpose Relays: General purpose, plug in, tube base, transparent polycarbonate housing, 3PDT, 10 amp contact rating, coil voltage as shown on drawings.
- B. General Purpose Timing Relays: General purpose, plug in, tube base, solid state, DPDT, 10 amp contacts, switch selectable timing mode (on delay, off delay, repeat cycle), switch selectable timing range (up to 10 hours). Voltage rating as shown on drawings.
- C. Power Relays: DPDT, 30 amp, 1-1/2 horsepower rated contacts, coil voltage as shown on drawings.
- D. Alternators: Two load alternator, plug in, tube base, 10 amp contact rating, DPDT cross connected, solid state alternating circuit, load 1-alternate-load 2 selector switch, voltage rating as shown on drawings.
- E. Mounting Sockets: Surface mounted, tube base, screw terminals, with retaining strap.
- F. Shall include a LED and mechanical visual indicator to indicate relay is energized.
- G. Shall include push-to-test-pull-to-lock button manual operator.
- H. Available Manufacturers: Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:

1. Allen Bradley Company.
2. Cutler Hammer.
3. Furnas Electric Company.
4. General Electric Company.
5. Potter and Brumfield, Inc.
6. Relco.
7. Square D Company.
8. SSAC, Inc.
9. Time Mark Corporation.

2.5 INTRINSICALLY SAFE RELAYS

- A. Type: Dual or single channel transformer type intrinsic safety barrier with built-in amplifier.
- B. Power: 120VAC, 50-60Hz.
- C. Power Consumption: 10VA maximum.
- D. Input: Isolated from output and supply.
- E. Output: Relay type SPST 2A/250V.
- F. Mounting: DIN rail.
- G. Operation Temperature: -45 deg F to + 131 deg F.
- H. State Mode of Operation: Switch selectable each channel.
- I. Fault Monitoring: LED indicator each channel (lead breakage).
- J. Output Status Monitoring: LED indicator each channel.
- K. Approvals:
 1. UL Listed or recognized component.
 2. Approved for providing intrinsically safe circuits for use in Class I, Div. 1 Hazardous Locations.
- L. Manufacturers:
 1. Pepperl and Fuchs.
 2. Phoenix Contact.
 3. Or approved equal.

2.6 ZENER BARRIERS

- A. Type: Dual channel zener barriers which accept 24Vdc field transmitter inputs and limit hazardous area energy to levels below that which could ignite a specific gas/air mixture.
- B. Working Voltage: 27Vdc.
- C. Maximum Voltage: 28Vdc.
- D. Mounting: DIN rail.

- E. Approvals: FM approved for Class I, Div. 1, Group D areas.
- F. Operation Temperature: -45 deg F to + 131 deg F.
- G. Manufacturers:
 - 1. Pepperl and Fuchs.
 - 2. Phoenix Contact.
 - 3. Or approved equal.

2.7 SENSING DEVICES

- A. Limit Switches.
 - 1. NEMA 4X.
 - 2. Four operating head mounting positions.
 - 3. DPDT contacts, momentary.
 - 4. Operating head style: As required per installation location.
 - 5. Stainless steel operating lever.
- B. Proximity Sensors.
 - 1. Inductive, shielded type.
 - 2. Stainless steel housing, 30 mm cylindrical.
 - 3. NEMA 4X, unless otherwise noted.
 - 4. Normally open contact.
 - 5. Voltage rating as shown on drawings.
- C. Door Switches.
 - 1. Two piece, surface mount.
 - 2. Magnet assembly for mounting on the door.
 - 3. Magnetically actuated reed switch assembly for mounting on the door jamb.
 - 4. Normally open contact, 24 VDC.
- D. Manufacturers. Subject to compliance, provide products manufactured by one of the following:
- E. Available Manufacturers. Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
 - 1. Allen Bradley Company.
 - 2. Cutler Hammer.
 - 3. Edwards.
 - 4. Furnas Electric Company.
 - 5. General Electric.
 - 6. Simplex.
 - 7. Square D Company.

2.8 ALARMS AND SIGNALS

- A. Horns.
 - 1. Vibrating diaphragm type.
 - 2. Minimum sound output of 100 decibels (dB) at 10 feet.
 - 3. Enclosure. NEMA 4X, with matching mounting box.
 - 4. Voltage rating. 120 VAC, unless otherwise shown.

- B. Warning Lights.
 1. Rotating sealed beam type.
 2. Incandescent lamp, 100 watt.
 3. NEMA 4X cast aluminum housing.
 4. Lexan dome color as shown on plans.
 5. Voltage rating. 120 VAC, unless otherwise shown.
- C. Strobe Lights.
 1. High intensity strobe, 100,000 candlepower minimum.
 2. Self-contained power supply.
 3. NEMA 4X cast aluminum housing.
 4. Lexan dome color as shown on plans
 5. Voltage rating. 120 VAC, unless otherwise shown.
- D. Manufacturers. Subject to compliance, provide products manufactured by one of the following:
- E. Available Manufacturers. Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
 1. Benjamin Division, Thomas Industries.
 2. Federal Signal Corporation.
 3. Maxi Signal Products, Division of MV Specialties.

2.9 TERMINAL BLOCKS

- A. General: NEMA style, rail mounted, tin-plated copper, screw type with pressure plate, 600 volt rated, wire range No. 22 to No. 8 American Wire Gauge (AWG).
- B. Fuse Blocks: Integral fuse puller and blown fuse indicator.
- C. Isolating Blocks: Knife style.
- D. Accessories
 1. Mounting rail.
 2. End barriers and end anchors.
- E. Available Manufacturers: Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
 1. Allen Bradley Company.
 2. Buchanan.
 3. Cutler-Hammer Products.
 4. Phoenix Contact.
 5. Square D Company.

2.10 CONTROL POWER TRANSFORMERS

- A. General: Copper windings, vacuum impregnated, open type, 480 volt primary and 120 volt secondary unless otherwise shown, with top mounted fuse block.
- B. Available Manufacturers: Subject to compliance, available manufacturers of products specified include, but are not limited to, the following:
 1. Allen Bradley Company.

2. Cutler-Hammer Products.
3. Heavy Duty.
4. Square D Company.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions
 1. Inspect installed work prior to performing the work of this section.
 2. Verify that the project has progressed to a point where this installation may begin.
- B. Discrepancies
 1. Immediately notify the Engineer in writing if any discrepancies are found.
 2. Resolve all discrepancies before proceeding with installation.
 3. Resolution must be acceptable to the Engineer.

3.2 PREPARATION

- A. Surface Preparation
 1. Carefully lay out the work in advance.
 2. Perform any cutting , drilling, etc. without damaging the building surfaces or equipment.
- B. Rough-In
 1. Refer to equipment submittals for rough-in requirements.
 2. Verify rough-in locations by field measurements.

3.3 INSTALLATION OF CONTROL DEVICES

- A. General.
 1. Install in accordance with manufacturer's written instructions.
 2. Follow applicable requirements of National Electrical Contractors Association's (NECA) "Standard of Installation."
 3. Coordinate with other work, including painting.
 4. Install control devices only in boxes that are clean and free from dirt and debris.
 5. Install control and indicating devices after wiring work is completed.
 6. Install control devices in enclosures as required under other sections and as shown.
 7. Tighten connectors and terminals to manufacturer's published torque tightening values.
 8. Where manufacturer's torque requirements are not indicated, comply with UL 486A.
- B. Grounding
 1. Provide equipment grounding connections for control and indicating devices.
 2. Tighten connection to comply with tightening torque specified in UL Standard 486A.

3.4 TESTING

- A. General.
 1. Prior to energizing circuitry, test control stations for electrical continuity.
 2. After completion, demonstrate capability and compliance with project requirements.

END OF SECTION 26 0900

SECTION 26 2200

TRANSFORMERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install transformers in accordance with the plans and as specified herein.
- B. Work of this Section includes, but is not limited to:
 - 1. Dry-type distribution transformers.
 - 2. Individual K-rated dry type transformers.

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Perform all work to furnish and install transformers in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
 - 1. Electrical Component Standard: Components and installation shall comply with National Fire Protection Association (NFPA) 70 "National Electrical Code (NEC)."
 - 2. American National Standards Institute/Institute of Electrical and Electronic Engineers (ANSI/IEEE) Compliance: Comply with applicable requirements of ANSI/IEEE Standards including C2, "National Electrical Safety Code," and C57.12.80, "Terminology for Power and Distribution Transformers."
 - 3. Nationally Recognized Testing Laboratory Compliance (NRTL): Items provided under this section shall be NRTL listed and labeled. The term "NRTL" shall be as defined in Occupational Safety and Health Administration (OSHA) Regulation 1910.7.
- B. Qualifications
 - 1. Manufacturer Qualifications: Member firm of National Electrical Manufacturers Association (NEMA) who is regularly engaged in manufacturing components that comply with the requirements of these specifications and that have been used on at least five projects of similar size and scope as this project.
 - 2. Testing: Manufacturer's standard shop test shall be performed in accordance with the latest version of ANSI and NEMA standards and shall include as a minimum the following. Provide certified factory test reports.
 - a. Ratio tests at the rated voltage connection and at all tap connections.
 - b. Polarity and phase relation tests on the rated voltage connection.
 - c. Applied potential tests.
 - d. Induced potential tests.
 - e. No-load and excitation current at rated voltage on the rated voltage connection.
 - 3. Field Testing Organization Qualifications: To qualify for acceptance, an independent testing organization must demonstrate, based on evaluation of organization submitted

criteria conforming to American Society for Testing and Materials (ASTM) E 699, that it has the experience and capability to conduct satisfactorily the testing indicated.

1.4 SUBMITTALS

- A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.
- B. Wiring diagrams from manufacturer differentiating between manufacturer installed and field installed wiring.
- C. Product certificates, signed by manufacturer of transformers certifying that their products comply with the specified requirements.

PART 2 - PRODUCTS

2.1 TRANSFORMERS, GENERAL

- A. Transformers: Factory assembled and tested, air cooled units of types specified, having characteristics and ratings as indicated. Units shall be designed for 60 Hertz (Hz) service.
 - 1. Cores: Grain oriented, non-aging silicon steel.
 - 2. Coils: Continuous copper windings without splices except for taps.
 - 3. Internal Coil Connections: Brazed or pressure type.
- B. General Purpose, Dry Type Transformers
 - 1. Comply with NEMA Standard ST 20 "Dry Type Transformers for General Applications."
 - 2. Windings: Two winding type. Three phase transformers shall use one coil per phase in primary and secondary.
 - 3. Enclosures: Indoor ventilated, unless noted otherwise.
 - 4. Insulation Class: 185 deg C or 220 deg C class for transformers 15 kilovolt amperes (kVA) or smaller; 220 deg C class for transformers larger than 15 kVA.
 - 5. Insulation Temperature Rise: 115 deg C maximum rise above 40 deg C.
 - 6. Taps: For transformers 3 kVA and larger, full capacity taps in high voltage winding as follows:
 - a. 15 - 500 kVA: Six 2.5% taps, two above and four below rated high voltage.
 - 7. Accessories: The following accessory items are required where indicated:
 - a. Wall Mounting Brackets. Manufacturer's standard brackets for transformers sized up to 75 kVA where wall mounting is indicated.
 - 8. Transformer sound levels shall not exceed ANSI standards.
 - 9. Transformers installed in an area which has sprinklers shall have a weathershield.
- C. K-Rated Transformers: K-rated transformers shall be as specified above, and in addition shall have the following features:
 - 1. K-rating of not less than 13.
 - 2. Secondary neutral terminal shall be sized for 200% of the secondary phase current.
 - 3. Full width electrostatic shielding between primary and secondary winding and ground to the transformer core.

2.2 MANUFACTURERS

- A. Subject to compliance with requirements, provide products by the following:
 - 1. Transformers
 - a. Eaton Corporation.
 - b. General Electric Company.
 - c. Square D Company.
 - d. Or approved equal.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Arrange equipment with a minimum clearance of 6 inches from any wall, to provide adequate spacing for cooling air circulation.
- B. Identify transformers in accordance with Division 26 Section "Electrical Identification".
- C. Tighten electrical connectors and terminals in accordance with manufacturer's published torque tightening values. Where manufacturer's torque values are not indicated, use those specified in UL Standards 486A and 486B.
- D. Install units on vibration mounts as shown; comply with manufacturer's indicated installation method, if any.
- E. Provide a housekeeping pad under all floor mounted transformers.
- F. Install bracket for wall mounted transformers using anchors and fasteners suitable for the weight of the transformer and all accessories.

3.2 GROUNDING

- A. Ground transformers and tighten connections to comply with tightening torques specified in UL Standard 486A.
- B. Transformer secondary neutral shall be grounded to building structural steel in conformance with the NEC.

3.3 ADJUSTING AND CLEANING

- A. Upon completion of installation, inspect interiors and exteriors of accessible components. Remove paint splatters and other spots, dirt, and construction debris. Touch up scratches and mars of finish to match original finish.
- B. Adjust transformer taps to provide optimum voltage conditions at utilization equipment.

3.4 PROTECTION

- A. Temporary Heating: Apply temporary heat in accordance with manufacturer's recommendations within enclosure of each transformer throughout periods during which equipment is not in a space that is continuously under normal control of temperature and humidity.

END OF SECTION 26 2200

SECTION 26 2716

CABINETS, BOXES, AND FITTINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to work of this Section.
- B. This section is a Division 26 section, and is a part of each Division 26 section making reference to electrical wiring boxes and fittings specified herein.

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install electrical boxes and fittings in accordance with the plans and as specified herein.
- B. Types of electrical boxes and fittings specified in this section include the following:
 - 1. Outlet boxes.
 - 2. Junction boxes.
 - 3. Pull boxes.
 - 4. Floor boxes.
 - 5. Bushings.
 - 6. Locknuts.
 - 7. Knockout closures.

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Perform all work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
 - 1. National Electrical Code (NEC) Compliance. Comply with NEC as applicable to construction and installation of electrical wiring boxes and fittings.
 - 2. Underwriters' Laboratories (UL) Compliance. Comply with applicable requirements of UL 50, UL 514 Series, and UL 886 pertaining to electrical boxes and fittings. Provide electrical boxes, fittings and enclosures which are UL listed and labeled.
 - 3. National Electrical Manufacturer's Association (NEMA) Compliance. Comply with applicable requirements of NEMA Standard Publication Nos. OS1, OS2, and 250 pertaining to outlet and device boxes, covers, and box supports.
 - 4. Federal Specification (FS) Compliance. Comply with applicable requirements of FS W-C-586, "Electrical Cast Metal Conduit Outlet Boxes, Bodies and Entrance Caps."

1.4 SUBMITTALS

- A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.

- B. Shop Drawings for Electrical Boxes and Fittings: For shop-fabricated junction and pullboxes, show accurately scaled views and spatial relationships to adjacent equipment. Show box types, dimensions, and finishes.

1.5 DEFINITIONS

- A. Finished locations. The following are defined as finished locations:
 - 1. Areas with carpet or tile floors.
 - 2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
 - 3. Areas with tiled, plastered, or paneled walls.
- B. Interior locations. The following are defined as interior locations:
 - 1. Any location within the boundaries of the foundation of any building.
 - 2. Any location within the superstructure of other structures not classified as buildings.
- C. Wet locations. The following are defined as wet locations:
 - 1. All exterior locations.
 - 2. All interior locations below grade.
 - 3. All interior locations where wet materials are processed, pumped, transported, or stored.
- D. Corrosive locations. The following are defined as corrosive locations.
 - 1. All locations with chemical feed/transfer equipment
 - 2. All locations with chemical storage tanks
 - 3. All locations where chemical storage drums are located.
- E. Hazardous (classified) locations. The following are defined as hazardous (classified) locations.
 - 1. All hazardous (classified) locations and their hazard classification are shown.

1.6 DELIVERY, HANDLING, AND STORAGE

- A. Store cabinets, boxes and fittings in clean, dry space; protect products from weather, damaging fumes, construction debris and traffic.

PART 2 - PRODUCTS

2.1 ELECTRICAL BOXES AND FITTINGS

- A. Electrical cabinets, boxes and fittings of indicated types, sizes, and NEMA enclosure classes. Where not indicated, provide units of types, sizes, and classes appropriate for the use and location. Provide all items complete with covers and accessories required for the intended use. Provide gaskets for units in damp or wet locations. Provide corrosion-resistant box knockout closures to suit respective installation requirements and applications.

2.2 METALLIC OUTLET, DEVICE AND WIRING BOXES

- A. General: Conform to UL 514A, "Metallic Outlet Boxes, Electrical" and UL 514B, "Fittings for Conduit and Outlet Boxes." Boxes shall be of type, shape, size, and depth to suit each location and application.
- B. Steel Boxes: Conform to NEMA OS 1, "Sheet Steel Outlet Boxes, Device Boxes Covers, and Box Supports." Boxes shall be sheet steel with stamped knockouts, threaded screw holes, and

accessories suitable for each location, including mounting brackets and straps, cable clamps, exterior rings, and fixture studs.

- C. Cast Aluminum Boxes: Copper-free aluminum threaded raceway entries and features and accessories suitable for each location including mounting ears, threaded screw holes for devices, and closure plugs.

2.3 NON-METALLIC OUTLET, DEVICE, AND WIRING BOXES

- A. General: Conform to NEMA OS 2, "Non-Metallic Outlet Boxes, Device Boxes, Covers, and Box Supports," and UL 514C, "Non-Metallic Outlet Boxes, Flush Device Boxes, and Covers." Boxes shall be molded PVC units of type, shape, size, and depth to suit location and application.
- B. Non-Metallic Boxes: Ultraviolet stabilized, non-conductive, high-impact-resistant boxes with integrally molded raceway entrance hubs and removable mounting flanges. Boxes shall be equipped with threaded screw holes for device and cover plate mounting. Each box shall have molded cover of matching polyvinyl chloride (PVC) material suitable for the application.

2.4 PULL AND JUNCTION BOXES

- A. General: Comply with UL 50, "Electrical Cabinets and Boxes," for boxes over 100 cubic inches volume. Boxes shall have screwed or bolted-on covers of same material as box and shall be of size and shape to suit application. All boxes 6-inch x 6-inch or larger shall have hinged doors. All boxes used for distribution of emergency power shall be painted red.
- B. Hot-Dipped Galvanized Steel Boxes: Sheet steel with welded seams. Where necessary to provide a rigid assembly, construct with internal structural steel bracing. Hot-dip galvanize after fabrication. Cover shall be gasketed.
- C. Stainless Steel Boxes: Fabricate of stainless steel conforming to Type 302 of American Society for Testing and Materials (ASTM) A 167, "Specification for Stainless and Heat Resisting Chromium Nickel Steel Plate, Sheet, and Strip." Where necessary to provide a rigid assembly, construct with internal structural stainless steel bracing. Cover shall be gasketed.
- D. Cast Aluminum Boxes: Molded of copper-free aluminum, with gasketed cover and integral threaded conduit entrances.
- E. Cast Nonmetallic Boxes: Ultraviolet stabilized, non-conductive, high-impact-resistant PVC boxes with gasketed cover and integral mounting flanges.

2.5 STEEL ENCLOSURES WITH HINGED DOORS

- A. General: Comply with UL 50, "Cabinets and Enclosures," and NEMA ICS6 "Enclosures for Industrial Control and Systems."
- B. Construction: Sheet steel, 16-gauge, minimum, with continuous welded seams. NEMA class as indicated; arranged for surface-mounting.
- C. Doors: Hinged directly to cabinet and removable with approximately 3/4-inch flange around all edges, shaped to cover edge of box. Provide handle-operated, key-locking latch. Individual door width shall be no greater than 24 inches. Provide multiple doors where required.

- D. Mounting Panel: Provide painted removable internal mounting panel for component installation.
- E. Enclosure: NEMA 12, unless noted otherwise. Where door gasketing is required, provide neoprene gasket attached with oil-resistant adhesive, and held in place with steel retaining strips.

2.6 CAST METALLIC ENCLOSURES WITH HINGED DOORS

- A. General: Copper-free aluminum with bolted, hinged doors. Where used at hazardous (classified) locations, enclosures shall conform to UL and shall be listed and labeled for the classification of hazard involved.

2.7 MOLDED NONMETALLIC ENCLOSURES WITH HINGED DOOR

- A. General: Molded, glass-fiber-reinforced high-impact-strength polyester with bolt or screw-secured doors and solid neoprene gaskets.

2.8 CORROSION INHIBITORS

- A. General: All enclosures containing equipment, terminals, or splices shall have a vapor phase corrosion inhibitor. Provide two spares for each one installed.

2.9 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, the following:
 1. Adalet-PLM Div.; Scott Fetzer Co.
 2. American Electric.
 3. Arrow-Hart Div.; Crouse-Hinds, Co.
 4. Appleton Electric Co.; Emerson Electric Co.
 5. Harvey Hubbell, Inc.
 6. OZ/Gedney Co.; General Signal Co.
 7. Pass and Seymour, Inc.
 8. Thomas & Betts Co., Inc.
 9. Walker; Wire Mold Company.
 10. Or approved equal.

PART 3 - EXECUTION

3.1 INSTALLATION OF ELECTRICAL BOXES AND FITTINGS

- A. Install electrical boxes and fittings as indicated, in accordance with manufacturer's written instructions, applicable requirements of NEC and National Electrical Contractor's Association (NECA) "Standard of Installation," and in accordance with recognized industry practices to fulfill project requirements.
- B. Install items where indicated and where required to suit code requirements and installation conditions. Cap unused knockout hole where blanks have been removed and plug unused conduit hubs so as to maintain the NEMA rating of the box. Install boxes in locations which ensure ready accessibility to enclosed electrical wiring and avoid installing boxes back-to-back

in walls where there would be less than 6 inches (150 mm) separation. Fasten boxes firmly and rigidly to substrates or structural surfaces to which attached, or solidly embed electrical boxes in concrete or masonry. Do not install aluminum products in concrete.

- C. Outlet and device boxes for flush-mounted installation shall be a minimum of 4-inch square or octagonal and positioned accurately to allow for surface finish thickness.
- D. Junction boxes, pullboxes, and enclosures with hinged doors which are surface-mounted shall utilize spacers to maintain 1/4-inch clearance from the wall.
- E. Floor boxes shall be installed level and flush with finish flooring material.
- F. Avoid using round boxes where conduit must enter box through side of box, which would result in difficult and secure connections when fastened with locknut or bushing on rounded surfaces.
- G. Provide electrical connections for installed boxes.

3.2 COORDINATION

- A. Coordinate installation of electrical cabinets, boxes, and fittings with wire/cable, wiring devices, and raceway installation work.

3.3 APPLICATIONS

- A. Outlet Boxes and Fittings: Install outlet and device boxes and associated covers and fittings of materials and NEMA types suitable for each location and in conformance with the following requirements:
 - 1. Use galvanized flat rolled sheet steel boxes only in finished areas.
 - 2. Use PVC coated steel boxes in corrosive non-hazardous areas as designated on the plans.
 - 3. Use boxes suitable for the classification in hazardous area as shown on the plans.
 - 4. Use cast metal boxes in all other locations.
- B. Pull and Junction Boxes: Install pull and junction boxes of materials and NEMA types suitable for each location and in conformance with the following:
 - 1. Use hot-dipped galvanized steel boxes only in finished areas.
 - 2. Use stainless steel boxes in corrosive non-hazardous areas and as designated on the plans.
 - 3. Use boxes suitable for the classification in hazardous area as shown on the plans.
 - 4. Use NEMA 4X stainless steel or cast metal boxes in all other locations.
- C. Enclosures with Hinged Doors: Install enclosures and associated materials and NEMA types suitable for each location and in conformance with the drawings.
- D. Floor Boxes: Install cast iron floor boxes at each location indicated.

3.4 GROUNDING

- A. General: Upon completion of installation work, properly ground electrical boxes and demonstrate compliance with requirements.

3.5 CLEANING AND FINISH REPAIR

- A. General: Upon completion of installation, inspect components, remove burrs, dirt, and construction debris, and repair damaged finish including chips, scratches, abrasions, and weld marks.

END OF SECTION 26 2716

SECTION 26 2726

WIRING DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes
 1. Receptacles.
 2. Heavy-duty receptacles.
 3. Hazardous location receptacles.
 4. Snap switches.
 5. Hazardous location snap switches.
 6. Wallbox dimming controls.
 7. Occupancy sensing light switches.
 8. Communications outlets.
 9. Covers and wall plates.
- B. Related Sections
 1. Division 01 Section "Submittal Procedures".
 2. Division 26 Section "Grounding".
 3. Division 26 Section "Electrical Identification".

1.3 REFERENCES

- A. Unless otherwise stated, references are to the latest edition of the standard.
- B. American National Standards Institute (ANSI)
 1. ANSI/IEEE C62.41, IEEE Recommended Practice for Surge Voltages in Low-Voltage AC Power Circuits.
 2. ANSI/NEMA WD 6, Wiring Devices—Dimensional Requirements.
- C. ASTM International (ASTM)
 1. ASTM B117, Standard Practice for Operating Salt Spray (Fog) Apparatus.
- D. National Electrical Manufacturers Association (NEMA)
 1. NEMA 250 Enclosures for Electrical Equipment (1000 Volts Maximum).
 2. NEMA Standard FB 11—Plugs, Receptacles, and Connectors of the Pin and Sleeve Type for Hazardous Locations.
 3. NEMA WD 1, General Color Requirements for Wiring Devices.
- E. Telecommunications Industry Association (TIA)
 1. TIA/EIA-568-B.1, Commercial Building Telecommunications Cabling Standard – Part 1: General Requirements.

- F. Underwriter's Laboratory (UL)
 - 1. UL 20, Standard for General-Use Snap Switches.
 - 2. UL 498, Standard for Attachment Plugs and Receptacles.
 - 3. UL 894, Standard for Switches For Use In Hazardous (Classified) Locations.
 - 4. UL 943, Standard for Ground-Fault Circuit-Interrupters.
 - 5. UL 1010, Standard for Receptacle-Plug Combinations For Use In Hazardous (Classified) Locations.
 - 6. UL 1203, Standard for Explosion-Proof and Dust-Ignition-Proof Electrical Equipment for Use in Hazardous (Classified) Locations.
 - 7. UL 1449, Standard for Surge Protection Devices.
 - 8. UL 1472, Solid-State Dimming Controls.
 - 9. UL 1682, Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type.
 - 10. UL 1686, Standard for Pin and Sleeve Configurations.
 - 11. UL 1863, Standard for Communications-Circuit Accessories.

1.4 DEFINITIONS

- A. Abbreviations
 - 1. AHJ: Authority Having Jurisdiction.
 - 2. NRTL: Nationally Recognized Testing Laboratory.
 - 3. GFCI: Ground-fault circuit interrupting.
- B. Finished Locations: The following are defined as finished locations:
 - 1. Areas with carpet or tile floors.
 - 2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
 - 3. Areas with tiled, plastered, or paneled walls.
- C. Interior Locations: The following are defined as interior locations:
 - 1. Any location within the boundaries of the foundation of any building.
 - 2. Any location within the superstructure of other structures not classified as buildings.
- D. Wet Locations: The following are defined as wet locations:
 - 1. All exterior locations.
 - 2. All interior locations below grade.
 - 3. All interior locations where wet materials are processed, pumped, transported, or stored.
- E. Corrosive Locations: The following are defined as corrosive locations.
 - 1. All locations with chemical feed/transfer equipment
 - 2. All locations with chemical storage tanks
 - 3. All locations where chemical storage drums are located.
- F. Hazardous (Classified) Locations: The following are defined as hazardous (classified) locations.
 - 1. All hazardous (classified) locations and their hazard classification are shown.

1.5 SUBMITTALS

- A. General
 - 1. Comply with the requirements of Division 01 section, "Submittal Procedures".
 - 2. Submit information as described below.
 - 3. Provide all information necessary to determine compliance.

- B. Product Data
 - 1. Manufacturer's technical product data sheets for all products specified in this section.
 - 2. Delete or cross out all inappropriate or non-applicable information.
- C. Samples: Submit sample of each type and color of wiring device and wall plate.

1.6 QUALITY ASSURANCE

- A. Regulatory Requirements
 - 1. All applicable federal, state, and local codes and regulatory requirements.
 - 2. National Electrical Code (NEC).

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

- A. General
 - 1. Provide new and unused products of current manufacture.
 - 2. Provide products free from defects affecting performance.
 - 3. All units of the same type must be from the same manufacturer.
 - 4. Provide nameplates conforming to Division 26 section, "Electrical Identification."
- B. Listing and Labeling
 - 1. Provide UL listed and labeled products.
 - 2. Provide products listed and labeled by an approved independent NRTL.
 - 3. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.

2.2 RECEPTACLES

- A. General
 - 1. Brass alloy power contacts and terminal screws.
 - 2. Side and back wired terminals.
 - 3. Self-grounding clip on mounting screw.
 - 4. Thermoplastic back cover.
 - 5. Nylon face.
 - 6. Suitable for solid or stranded copper wire.
- B. General-Purpose Receptacles
 - 1. Industrial specification grade.
 - 2. NEMA WD 1, NEMA WD 6, UL 498.
 - 3. Straight blade NEMA WD6, 5-20R.
 - 4. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
 - 5. Single or duplex as shown.
- C. GFCI Receptacles
 - 1. Industrial specification grade.
 - 2. NEMA WD 1, NEMA WD 6, UL 498, UL 943.
 - 3. Straight blade NEMA WD6, 5-20R.
 - 4. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
 - 5. Single or duplex as shown.
 - 6. Feed-through type.

7. Suitable for mounting in 2-3/4 inch box without adapter.
- D. Isolated ground receptacles.
1. Industrial specification grade.
 2. NEMA WD 1, NEMA WD 6, UL498.
 3. Straight blade NEMA WD6, 5-20R.
 4. Brass alloy mounting strap.
 5. Brass alloy Isolated ground terminal, and ground contacts.
 6. Identified with orange triangle on face.
- E. TVSS Receptacles
1. Industrial specification grade.
 2. NEMA WD 1, NEMA WD 6, UL498, UL 1449, ANSI/IEEE C62.41 Category A and B.
 3. Straight blade NEMA WD6, 5-20R.
 4. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
 5. Integral TVSS in line to ground, line to neutral, and neutral to ground
 - a. Multiple metal-oxide varistors.
 - b. Nominal clamp level rating of 500 volts.
 - c. Minimum single transient pulse energy dissipation of 140 J line to neutral, and 70 J line to ground and neutral to ground.
 6. Condition indicator light and audible alert.
 7. Distinctive marking on face of device to denote TVSS-type unit.
- F. Hospital grade receptacles.
1. Hospital grade.
 2. NEMA WD 1, NEMA WD 6, UL498.
 3. Straight blade NEMA WD6, 5-20R.
 4. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
 5. Identified with green dot on face.
- G. Tamper-resistant receptacles.
1. [Industrial specification grade][Hospital grade].
 2. NEMA WD 1, NEMA WD 6, UL498.
 3. Straight blade NEMA WD6, 5-20R.
 4. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
 5. UL listed as tamper-resistant.
 6. Internal shutter mechanism to limit access to energized components.
 7. Prevents object insertion unless both contacts are engaged.
 8. Identified with green dot on face.
 9. Identified on face as tamper-resistant.
- H. Weather-resistant receptacles
1. Industrial specification grade.
 2. UL listed as weather-resistant.
 3. NEMA WD 1, NEMA WD 6, UL 498.
 4. Ultraviolet light exposure, cold impact, and accelerated aging tests.
 5. Straight blade NEMA WD6, 5-20R.
 6. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
 7. Single or duplex as shown.
 8. Identified on face as weather-resistant.

- I. Corrosion-Resistant Receptacles
 - 1. Industrial specification grade.
 - 2. NEMA WD 1, NEMA WD 6, UL 498.
 - 3. Pass ASTM B117, 500-hour salt spray test.
 - 4. Straight blade NEMA WD6, 5-20R.
 - 5. One-piece brass alloy mounting strap, ground terminal, and ground contacts.
 - 6. All metal parts nickel-plated.
 - 7. Nickel-plated mounting screws.
 - 8. Single or duplex as shown.

- J. Receptacle Colors
 - 1. Normal Power: Ivory.
 - 2. Emergency Power: Red.
 - 3. TVSS Protected: Blue.
 - 4. Corrosion-resistant: Yellow.

- K. Available Manufacturers: Subject to compliance, available manufacturers of the specified products include but are not limited to the following:
 - 1. Hubbell Incorporated.
 - 2. Leviton Manufacturing Company Incorporated.
 - 3. Pass & Seymour/Legrand; Wiring Devices Division.

2.3 HEAVY-DUTY RECEPTACLES

- A. General
 - 1. UL 498, UL 1682, UL 1686.
 - 2. Pin and sleeve type.
 - 3. Brass contacts.
 - 4. Cast aluminum body.
 - 5. Ampere rating as shown.
 - 6. Attached screw cap.
 - 7. Suitable for wet locations.
 - 8. Color coded and configured to a specific circuit voltage and current rating.
 - 9. Circuit breaking type, arc from disconnecting under load contained with an arc chamber.

- B. Accessories
 - 1. Cast aluminum back box suitable for installed location.
 - 2. Matching plug for each receptacle.

- C. Manufacturers: Subject to compliance, provide products by one of the following.
 - 1. Appleton.
 - 2. Arrow-Hart.
 - 3. Crouse-Hinds.

2.4 RECEPTACLES IN HAZARDOUS (CLASSIFIED) LOCATIONS

- A. General
 - 1. Receptacles rated for specific hazardous locations shown.

- B. General purpose receptacle
 - 1. UL 1010, NEMA WD 6, NEMA 250.

2. NEMA WD6 5-20R.
3. Cast aluminum body.
4. Brass contacts.
5. Factory sealed.
6. Attached cover with hinge and gasket.
7. Suitable for wet locations.
8. Circuit breaking type, plug cannot be removed until disconnecting mechanism rotated.

C. GFCI receptacle

1. UL 943, UL 1010, UL 1203, NEMA WD 6, NEMA 250.
2. NEMA WD6 5-20R.
3. Cast aluminum body.
4. Brass contacts.
5. Factory sealed receptacle.
6. Separate factory sealed GFCI unit.
7. Feed-thru type.
8. Attached receptacle cover with hinge and gasket.
9. Circuit breaking type, plug cannot be removed until disconnecting mechanism rotated.

D. Heavy-duty receptacle

1. UL 1010, UL 1686, NEMA FB 11, NEMA 250.
2. Pin and sleeve type.
3. Brass contacts.
4. Cast aluminum body.
5. Ampere rating as shown.
6. Attached receptacle cover with hinge and gasket.
7. Suitable for wet locations.
8. Color coded and configured to a specific circuit voltage and current rating.
9. Circuit breaking type, arc from disconnecting under load contained with an arc chamber.

E. Accessories

1. Cast aluminum back box suitable for installed location.
2. Matching plug for each receptacle.

F. Available manufacturers. Subject to compliance, available manufacturers of the specified products include but are not limited to the following:

1. Appleton.
2. Crouse-Hinds.

2.5 SNAP SWITCHES

A. General

1. Single-pole, 2-pole, 3-way, 4-way and illuminated handle snap switches as shown.
2. NEMA WD 1, UL 20.

B. Construction

1. Quiet-type alternating current (ac) switches, 20 ampere, 120-277 volt.
2. Side and back wired, screw pressure terminal.
3. Brass alloy terminal screws.
4. Yoke grounding screw.
5. Thermoplastic back cover.

6. Suitable for solid or stranded copper wire.
7. Switch handle color: Ivory.

- C. Available Manufacturers: Subject to compliance, available manufacturers of the specified products include but are not limited to the following:
1. Hubbell Incorporated.
 2. Leviton Manufacturing Company Incorporated.
 3. Pass & Seymour/Legrand; Wiring Devices Division.

2.6 SNAP SWITCHES IN HAZARDOUS (CLASSIFIED) LOCATIONS

A. General

1. UL 20, UL 894, NEMA WD 1, NEMA 250.
2. Rated 20 ampere, 120-277 volt AC.
3. Quiet-type alternating current (ac) switches, 20 ampere, 120-277 volt.
4. Side and back wired, screw pressure terminal.
5. Brass alloy terminal screws.
6. Yoke grounding screw.
7. Thermoplastic back cover.
8. Suitable for solid or stranded copper wire.
9. Cast metal enclosure and cover rated for specific hazardous locations shown.

- B. Available manufacturers: Subject to compliance, available manufacturers of the specified products include but are not limited to the following:
1. Appleton.
 2. Crouse-Hinds.

2.7 WALLBOX DIMMING CONTROLS

A. General

1. UL 1472.
2. Solid-state full-wave dimmer.
3. Integral, quiet on/off switch, with audible frequency and EMI/RFI suppression filters.
4. Single-pole, 3-way, and 4-way switching.
5. Continuously adjustable slider control.
6. Illuminated when off.

B. Incandescent lamp dimming controls

1. 120 V.
2. Follow square-law dimming curve.
3. Bypass dimmer module with on/off switch positions.
4. Rated wattage: 600 with no de-rating when ganged with other devices.

C. Fluorescent lamp dimming controls

1. Modular; compatible with dimming ballasts.
2. Trim potentiometer to adjust low-end dimming.
3. Dimmer-ballast combination low end dimming down to 20 percent of full brightness.

- D. Available manufacturers: Subject to compliance, available manufacturers of the specified products include but are not limited to the following:
1. Lutron.

2. Or approved equal.

2.8 OCCUPANCY SENSING LIGHT SWITCHES

A. Wall-Switch Sensors

1. Wall box mounted.
2. Dual voltage (120 and 277 volts).
3. Dual technology passive-infrared and ultrasonic.
4. One hundred eighty degree field of view.
5. Adjustable time delay up to 30 minutes.
6. Adjustable sensitivity.
7. Suitable for electronic ballast inrush currents.
8. Minimum coverage area of 900 square feet.

B. Long-Range Wall-Switch Sensors

1. Wall box mounted.
2. Dual voltage (120 and 277 volts).
3. Passive infrared type.
4. One hundred ten degree field of view.
5. Adjustable time delay up to 30 minutes.
6. Adjustable sensitivity.
7. Suitable for electronic ballast inrush currents.
8. Minimum coverage area of 1200 square feet.

C. Wide-Range Wall-Switch Sensors

1. Wall box mounted.
2. Dual voltage (120 and 277 volts).
3. Passive infrared type.
4. One hundred fifty degree field of view.
5. Adjustable time delay up to 30 minutes.
6. Adjustable sensitivity.
7. Suitable for electronic ballast inrush currents.
8. Minimum coverage area of 1200 square feet.

D. Exterior Occupancy Sensors

1. Weatherproof.
2. Dual voltage (120 and 277 volts).
3. Passive infrared type.
4. One hundred eighty degree field of view.
5. Adjustable time delay up to 15 minutes.
6. One hundred ten foot detection range.
7. Suitable for electronic ballast inrush currents.

E. Manufacturers: Subject to compliance, provide products by one of the following:

1. Hubbell.
2. Leviton.
3. Pass & Seymour.
4. Watt Stopper.

2.9 COMMUNICATIONS OUTLETS

- A. Telephone Outlet
 1. UL 1863, TIA/EIA-568-B.1 Category 5e.
 2. One RJ-45 jack.
- B. Combination TV and Telephone Outlet
 1. UL 1863, TIA/EIA-568-B.1 Category 5e.
 2. One RJ-45 jack.
 3. One Type F coaxial cable connector.
- C. Available manufacturers: Subject to compliance, available manufacturers of the specified products include but are not limited to the following:
 1. Cooper.
 2. Leviton.

2.10 COVERS AND WALL PLATES

- A. General
 1. UL 514D.
 2. Single and combination type with ganging and cut-outs as required.
 3. Metal plate-securing screws to match plate finish.
- B. Finished Locations
 1. Minimum 0.05 inch thick.
 2. Type 302 satin stainless steel.
- C. Other Interior Locations: Galvanized steel.
- D. Weatherproof Covers
 1. Rain-proof while in use in compliance with NEC Article 410-57.
 2. Cast aluminum plate with neoprene gasket.
 3. Hinged, self-closing, cast aluminum device cover.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions
 1. Verify outlet boxes are installed at proper locations and heights.
 2. Verify wall openings are neatly cut and will be completely covered by wall plates.
 3. Verify branch circuit wiring is completed, tested, and ready for connection to wiring devices.
- B. Discrepancies
 1. Immediately notify the Engineer in writing of conditions detrimental to proper completion of the work.
 2. Correct all unsatisfactory conditions before proceeding with installation.
 3. Resolution must be acceptable to the Engineer.
- C. Clean debris from outlet boxes before installing devices.

3.2 INSTALLATION

A. General

1. Install products following manufacturer's instructions.
2. Coordinate with other work, including painting, electrical boxes and wiring installations.
3. Install devices plumb, level, and secure.
4. Mount receptacles in finished areas at 1'-6" above the finished floor.
5. Mount receptacles in all other areas at 4'-0" above the finished floor.
6. Mount all wall switches at 4'-0" above finished floor.
7. Install wiring devices after wiring work is completed.
8. Install wall plates after painting work is completed.
9. Unless otherwise shown, mount devices flush, with long dimension vertical.
10. Group adjacent switches and receptacles under a single, multi-gang wall plate.
11. Do not use the duplex/split-wire break-off tabs in receptacles as circuit conductors for connecting downstream devices.
12. Install receptacles for electric water coolers (EWC) within the cabinet.

B. Dual-Level Lighting Control

1. Provide dual-level lighting control in spaces 100 square feet and larger.
2. Provide controls to reduce the lighting load by at least 50 percent.
3. Coordinate controls to reduce lighting in a reasonably uniform lighting pattern.
4. Coordinate dual-level lighting controls with day lighting apertures, such as windows.

C. Grounding

1. Ground wiring devices as specified in Division 26 section, "Grounding".
2. Connect grounding terminal to branch circuit equipment grounding conductor.

D. Identification: Identify wiring devices as required in Division 26 section, "Electrical Identification".

3.3 FIELD QUALITY CONTROL

A. Inspections

1. Inspect each wiring device for defects before installing.
2. Have a qualified manufacturer's representative inspect the installation.

B. Operate each operable device at least six times with circuit energized.

C. Receptacles

1. Test each 20-ampere receptacles for proper polarity and ground continuity.
2. Use a UL listed test device.

D. GFCI Receptacles

1. Test operation according to manufacturer recommendations.
2. Verify that GFCI will trip at 5 ± 1 mA current.
3. Verify that GFCI does not trip at less than 1.8 mA current.

E. Replace damaged or defective wiring devices

3.4 ADJUSTING

- A. Adjust each occupancy sensor.
- B. Occupancy Sensor Time-Out Controls
 - 1. Utility, lunch/break, storage, and copier rooms: 5-minute time-out setting.
 - 2. Conference rooms: 10-minute time-out setting.
 - 3. Corridors and lobbies: 15-minute time-out setting.
 - 4. All other locations: longest time out setting, but not more than 30 minutes.
- C. Ambient Light Sensor: Set to turn off lights when daylighting exceeds 80% of the design illuminance.

3.5 CLEANING

- A. General
 - 1. Clean devices and wall plates.
 - 2. Replace stained or improperly painted wall plates or devices.
 - 3. Adjust devices and wall plates to be flush and level.

END OF SECTION 26 2726

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 2813

OVERCURRENT PROTECTIVE DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and all divisions of specification sections, apply to this Section.

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to install overcurrent protective devices (OCPDs) in accordance with the plans and as specified herein.
- B. Work of this Section includes, but is not limited to:
 - 1. Fuses
 - a. Fuses rated 600A and less.
 - b. Fuses rated above 600A.
 - 2. Circuit breakers.

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Perform all work associated with overcurrent protective devices in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.
 - 1. Electrical Component Standard: Components and installation shall comply with National Fire Protection Association (NFPA) 70 "National Electrical Code (NEC)."
 - 2. Listing and Labeling: Provide products specified in this section that are listed and labeled (as defined as they are in the NEC, Article 100).
 - 3. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in Occupational Safety and Health Administration (OSHA) Regulation 1910.7.
- B. Single Source Responsibility: Obtain similar OCPDs from a single manufacturer.

1.4 SUBMITTALS

- A. General: Furnish manufacturer's product data, test reports, and materials certifications as required.
- B. Submittals: Submit the following in accordance with Conditions of Contract and Division 01 specification sections:
 - 1. Product data for fuses, circuit breakers, and OCPD accessories specified in this section, including descriptive data and time-current curves for all protective devices and let-through current curves for those with current limiting characteristics. Include coordination charts and tables and related data.

- C. Reference Submittals
 1. Manufacturer's descriptive literature.
 2. Operating and maintenance instructions.
 3. Spare parts list.

1.5 DELIVERY, HANDLING, AND STORAGE

- A. Deliver OCPDs and components in factory fabricated type containers or wrappings, which properly protect devices from damage.
- B. Handle OCPDs carefully to prevent physical damage to OCPDs and components. Do not install damaged OCPDs; remove from site and replace damaged devices with new.
- C. Store OCPDs in original packaging and protect from weather and construction traffic. Wherever possible, store indoors; where necessary to store outdoors, store above grade and enclose with watertight wrapping.

1.6 DEFINITIONS

- A. OCPD: A device operative on excessive current that causes and maintains the interruption of power in the circuit it protects.
- B. Ampere Squared Seconds: An expression of available thermal energy resulting from current flow. With regard to current limiting fuses and circuit breakers, the ampere squared seconds during fault current interruption represents the energy allowed to flow before the fuse or breaker interrupts the fault current within its current limiting range.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. General
 1. Provide OCPDs in indicated types, as integral components of panelboards, switchboards, and motor control centers; and also as individually enclosed and mounted single units.
 2. Enclosures: National Electrical Manufacturers Association (NEMA) 250 "Enclosures for Electrical Equipment (1,000 volts Maximum)."
- B. Cartridge Fuses
 1. NEMA Standard FU1, "Low Voltage Cartridge Fuses": Unless indicated otherwise, provide nonrenewable cartridge fuses of indicated types, classes, and current ratings that have voltage ratings consistent with the circuits on which used.
 2. Class J Fuses: Underwriters' Laboratories, Inc. (UL) 198C, "High Interrupting Capacity Fuses, Current Limiting Type".
 3. Class L Fuses: UL 198C, "High Interrupting Capacity Fuses, Current Limiting Type".
 4. Class RK1 and RK5 Dual Element Time Delay Fuses: UL 198E, "Class R Fuses".
 5. Provide a complete set of fuses for all fusible equipment on the job.
 6. All fuses shall be of the same manufacturer and shall have an interrupting rating of 200,000 A, RMS symmetrical, except where otherwise noted.
 7. All fuses shall bear UL label and class designation.
 8. Place fuse identification labels showing size and type of fuse installed inside the cover of each switch or piece of equipment.

9. Fuse voltage shall be as required for the service.
10. Fuses Rated 600A and Less
 - a. Fuses which protect motor circuits and transformers shall be time delay type, UL Listed, Class RK-1, except where otherwise noted.
 - b. Fuses which are protecting circuit breakers, circuit breaker panels, and resistive heating circuits shall be fast-acting, current limiting type, UL listed, Class J, except where otherwise noted.
11. Fuses Rated Above 600 A
 - a. Fuses which protect motor circuits shall be time delay, current limiting type, UL listed, NEMA Class L, except where otherwise noted.
 - b. Fuses which are protecting circuit breakers, circuit breaker panels, and resistive heating circuits shall be fast-acting, current-limiting type, UL listed, class L.

C. Circuit Breakers

1. Molded case type, with ampere rating, frame size and number of poles as shown.
2. Comply with the following:
 - a. UL 489 "Molded Case Circuit Breakers and Circuit Breaker Enclosures."
 - b. NEMA AB 1 "Molded Case Circuit Breakers."
 - c. Federal Specification W-C-375.
3. Bolt in type, except breakers 225 ampere frame size and larger may be plug in type if held in place by positive locking device requiring mechanical release for removal.
4. Minimum RMS symmetrical short circuit interrupting capacity rating.
 - a. 10,000 Amperes at 120/240V.
 - b. 18,000 amperes at 277V.
 - c. 35,000 amperes at 480V.
5. Quick make, quick break toggle mechanism.
6. Inverse time-current characteristic overload protection for each pole.
7. Instantaneous magnetic trip element short circuit protection for each pole.
8. Solid state trip device for circuit breaker frame sizes over 250 Amperes.
 - a. Independently adjustable long time, short time, and instantaneous trip settings.
 - b. Ground fault trip unit where shown, adjustable for pick up and time delay.
 - c. Settings adjustable from front of breaker controls and/or plug-in element change.
 - d. Indicator for cause of trip.
9. Provide circuit breakers appropriate for applications, including Type SWD for switching fluorescent lighting loads, and Type HACR for heating, air-conditioning, and refrigeration equipment.

D. OCPD Accessories

1. Provide key interlocks where shown.
 - a. Arrange interlocking so keys are held captive at devices indicated.
 - b. Where future key interlocking provisions are indicated, provide necessary mountings and hardware as required for the future installation.
2. Labels: Install label inside enclosure identifying the type of OCPD installed, its overcurrent rating, its interrupt rating and UL class. Where applicable, trip settings and time delays should be provided on permanent labels.

- E. Extra Materials: For types and ratings required, furnish spare fuses, amounting to one fuse for every five installed fuses, but not less than one set of three of each type of fuse.

2.2 MANUFACTURERS

- A. Subject to compliance with requirements, provide products by the following:
 - 1. Cartridge Fuses
 - a. General Electric Co.
 - b. Littelfuse Inc., Tracor, Inc.
 - 2. Molded Case Circuit Breakers
 - a. Eaton Corporation.
 - b. General Electric Company.
 - c. Square D Company.
 - d. Or approved equal.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General
 - 1. Install fuses and circuit breakers as indicated, in accordance manufacturer's written instructions and with recognized industry practices to ensure that protective devices comply with requirements. Comply with the NEC, and NEMA Standards.
 - 2. Inspect each circuit breaker and fuse visually.
 - 3. Perform several mechanical ON-OFF operations on each circuit breaker and switch.
 - 4. Verify circuit continuity on each pole in closed position.
- B. Independently Mounted OCPDs: Locate as indicated and install in accordance with manufacturer's written installation instructions.
- C. OCPDs in distribution equipment shall be factory installed.

3.2 IDENTIFICATION

- A. Identify components in accordance with Division 26, Section "Electrical Identification".

3.3 CONNECTIONS

- A. Check connectors, terminals, bus joints, and mountings for tightness. Tighten field connected connectors and terminals, including screws and bolts, in accordance with equipment manufacturer's published torque tightening values. Where manufacturer's torque requirements are not indicated, tighten connectors and terminals to comply with tightening torques specified in UL Standards 486A and UL 486B.

3.4 GROUNDING

- A. Provide equipment grounding connections for individually mounted OCPD units as indicated and as required by NEC. Tighten connectors to comply with tightening torques specified in UL Standard 486A to assure permanent and effective grounding.

3.5 FIELD QUALITY CONTROL

- A. Visual and Mechanical Inspection: Include the following inspections and related work.
 - 1. Overcurrent Protective Device Ratings and Settings: Verify indicated ratings and settings to be appropriate for final system arrangement and parameters. Where discrepancies are found, test organization shall recommend final protective device ratings and settings. Use accepted revised ratings or settings to make the final system adjustments.
 - 2. Inspect for defects and physical damage, NRTL labeling, and nameplate compliance with current single line diagram.
 - 3. Exercise and perform operational tests of all mechanical components and other operable devices in accordance with manufacturer's instruction manual.
 - 4. Check tightness of electrical connections of OCPDs with calibrated torque wrench. Refer to manufacturer's instructions for proper torque values.
 - 5. Clean OCPDs using manufacturer's approved methods and materials.
 - 6. Verify installation of proper fuse types and ratings in fusible OCPDs.

3.6 CLEANING

- A. Upon completion of installation, inspect OCPDs. Remove paint splatters and other spots, dirt, and debris. Touch up scratches and mars of finish to match original finish.

3.7 DEMONSTRATION

- A. Training: Arrange and pay for the services of factory authorized service representatives to demonstrate OCPDs and train Owner's maintenance personnel.
- B. Conduct a minimum of one half day of training in operation and maintenance as specified under "Instructions to Owner Employees" in the "Project Closeout" section of these specifications. Include both classroom training and hands-on equipment operation and maintenance procedures.
- C. Schedule training with at least 7 days' advance notification.

END OF SECTION 26 2813

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 2816

ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes
 1. Service disconnecting means.
 2. Feeder and branch-circuit protection.
 3. Equipment disconnecting means.
 4. Motor circuit disconnecting means.
- B. Related Sections
 1. Division 01 Section "Submittal Procedures".
 2. Division 01 Section "Operation and Maintenance Data".
 3. Division 26 Section "Electrical Identification".
 4. Division 26 Section "Overcurrent Protective Devices".

1.3 REFERENCES

- A. Unless otherwise stated, references are to the latest edition of the standard.
- B. Underwriter's Laboratory, Inc. (UL)
 1. UL 98, Enclosed and Dead Front Switches.
 2. UL 486A-486B, Wire Connectors.
- C. InterNational Electrical Testing Association (NETA)
 1. ATS, Acceptance Testing Specifications for Electric Power Distribution Equipment and Systems.
- D. National Electrical Manufacturers Association (NEMA)
 1. NEMA KS 1, Enclosed Switches.
 2. NEMA 250, Enclosures for Electrical Equipment (1,000 Volts Maximum).
 3. NEMA AB1, Molded Case Circuit Breakers.
- E. National Fire Protection Association (NFPA)
 1. NFPA 70, National Electrical Code (NEC).

1.4 DEFINITIONS

- A. Abbreviations
 1. AHJ: Authority having jurisdiction.
 2. NRTL: Nationally recognized testing laboratory.

- B. Interior Locations: The following are defined as interior locations:
 1. Any location within the boundaries of the foundation of any building.
 2. Any location within the superstructure of other structures not classified as buildings.
- C. Wet Locations: The following are defined as wet locations:
 1. All exterior locations.
 2. All interior locations below grade.
 3. All interior locations where wet materials are processed, pumped, transported, or stored.
- D. Corrosive Locations: The following are defined as corrosive locations.
 1. All locations with chemical feed/transfer equipment
 2. All locations with chemical storage tanks
 3. All locations where chemical storage drums are located.
- E. Hazardous (Classified) Locations: The following are defined as hazardous (classified) locations.
 1. All hazardous (classified) locations and their hazard classification are shown.
- F. Seismic Withstand: When subjected to the specified seismic forces, seismic withstand means:
 1. The unit will remain in place.
 2. No parts will separate from the unit.
 3. The unit will be fully operational after the seismic event.

1.5 SUBMITTALS

- A. General
 1. Comply with the requirements of Division 01 Section "Submittal Procedures".
 2. Submit information as described below.
 3. Provide all information needed to determine compliance.
- B. Product Data
 1. Manufacturer's technical product data sheets.
 2. Delete or cross out all inappropriate or non-applicable information.
- C. Shop Drawings
 1. Dimensional drawings for enclosures.
 2. Time-current curves, including selectable ranges for each type of circuit breaker.
 3. Wiring Diagrams: Submit wiring diagrams for all products.
 - a. Show all components and features specified.
 - b. Differentiate between factory installed and field installed wiring and components.
- D. Quality Control Submittals
 1. Manufacturer Seismic Qualification Certification
 - a. Submit certification that products will withstand seismic forces defined in Division 26 section, "Seismic Controls for Electrical Work."
 - b. Indicate whether certification is based on actual testing calculation.
 - c. Identify center of gravity and locate and describe mounting and anchorage provisions on a dimensioned outline drawing.
 - d. Provide description of equipment anchorage devices on which certification is based and their installation requirements.
 2. Qualification Data: Submit compliance data for testing agencies.

3. Manufacturer's Instructions. Submit manufacturer's current installation instructions.

E. Contract Closeout Submittals

1. Project record documents.
2. Operation and Maintenance (O&M) Data
 - a. Comply with Division 01 section, "Operation and Maintenance Data."
 - b. Include instructions on start-up, operation, and maintenance.
 - c. Manufacturer's instructions for testing and adjusting switches and circuit breakers.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements: Perform all work in compliance with the following:

1. All applicable federal, state, and local codes and regulatory requirements.
2. National Electrical Code (NEC).

B. Testing Agency Qualifications

1. Member of NETA.
2. Acceptable to authorities having jurisdiction.
3. Field Supervisor currently certified by the NETA.

C. Product Selection for Restricted Space

1. Drawings indicate maximum dimensions for enclosed switches and circuit breakers.
2. Comply with indicated maximum dimensions.

1.7 MAINTENANCE

A. Extra Materials: Provide extra materials described below:

1. Match products installed.
2. Packaged with protective covering for storage.
3. Identified with labels describing contents.
4. Fuses: Provide 3 fuses of each size used on project.

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

A. General

1. Provide new and unused products of current manufacture.
2. Provide products free from defects affecting performance.
3. All units of the same type must be from the same manufacturer.

B. Listing and Labeling

1. Provide UL listed and labeled products.
2. Provide products listed and labeled by an approved independent NRTL.
3. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.
4. Provide a service equipment label on all switches and circuit breakers used as a service disconnecting means.

2.2 MANUFACTURERS

A. Subject to compliance, provide products by one of the following:

1. Cutler-Hammer.
2. Square D Company.
3. Or approved equal.

2.3 ENCLOSED SWITCHES

A. General

1. NEMA KS 1, UL-98.
2. Heavy duty safety switch.
3. Quick make, quick break mechanism.
4. Switch blades visible in OFF position with door open.
5. High conductivity copper current carrying parts and silver tungsten switch contacts.
6. Rated for 60 and 75 degree Celsius wire.

B. Operating Handle

1. Handle down in the off position.
2. Pad-lockable in off position with up to three padlocks.
3. Interlocked with cover to prevent opening cover with switch in closed position.
4. Inconspicuous interlock defeat mechanism.

C. Fusible Switches

1. Positive-pressure reinforced fuse clips.
2. Class R rejection type.
3. Fuses as shown and as specified in Division 26 Section "Overcurrent Protective Devices".

D. Accessories

1. Neutral lug kit.
2. Ground lug.
3. Auxiliary contact.

2.4 ENCLOSED CIRCUIT BREAKERS

A. General

1. Molded case circuit breaker as shown and as specified in Division 26 Section "Overcurrent Protective Devices".
2. NEMA AB 1.
3. Mechanical lugs sized for quantity, size, and type of conductors shown on the drawings.
4. Shunt trip coil
 - a. Where shown on the drawings.
 - b. 120 V energized from separate circuit.
 - c. Set to trip at 75 percent of rated voltage.

B. Operating Handle

1. Handle down in the off position.
2. Pad-lockable in off position with up to three padlocks.
3. Interlocked with cover to prevent opening cover with switch in closed position.
4. Inconspicuous interlock defeat mechanism.

C. Accessories

1. Neutral lug kit.

2. Ground lug.
3. Auxiliary contact.

2.5 ENCLOSURES

A. General

1. Wet Locations: NEMA 250, Type 4X stainless steel.
2. Corrosive Areas: NEMA 250, Type 4X non-metallic.
3. Class 1 Hazardous Locations: NEMA 250 Type 7 cast aluminum.
4. All Other Locations: NEMA 250, Type 12 painted steel.

B. Finish: Manufacturer's standard paint factory applied before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions

1. Examine surfaces that will receive the enclosed switches and circuit breakers.
2. Verify that the project has progressed to a point where this installation may begin.

B. Discrepancies

1. Immediately notify the Engineer in writing if any discrepancies are found.
2. Resolve all discrepancies before proceeding with installation.
3. Resolution must be acceptable to the Engineer.

3.2 PREPARATION

A. Surface Preparation

1. Carefully lay out the work in advance.
2. Perform any cutting, drilling, etc. without damaging the building surfaces or equipment.

B. Rough-in

1. Refer to equipment submittals for rough-in requirements.
2. Verify rough-in locations by field measurements.

3.3 INSTALLATION

A. General

1. Comply with the manufacturer's installation instructions.
2. Install enclosed switches and circuit breakers where shown.
3. Locations shown are approximate unless dimensioned.
4. Coordinate layout and installation with other construction, including conduit.
5. Maintain required workspace clearance.
6. Install motor disconnecting means within sight of the motor.
7. Provide suitable means for mounting enclosed switches and circuit breakers.
8. Remove temporary lifting means and blocking of moving parts.
9. Comply with mounting and anchoring requirements of in Division 26 section, "Seismic Controls for Electrical Work."

B. Connections

1. Tighten connectors and terminals according to manufacturer published torque values.
2. Where manufacturer torque values are not indicated, follow UL 486A-486B.
3. Provide effective and permanent grounding connections.

C. Identification

1. Identify field-installed conductors, interconnecting wiring, and components.
2. Provide warning signs as specified in Division 26 section, "Electrical Identification."
3. Label each enclosure as specified in Division 26 section, "Electrical Identification."

3.4 FIELD QUALITY CONTROL

A. Prepare for Acceptance Tests

1. Test insulation resistance for each enclosed switch and circuit breaker.
2. Test continuity of each line- and load-side circuit.

B. Testing

1. Do not start testing until enclosed switches and circuit breakers are installed and electrical circuitry has been energized.
2. Demonstrate product capability and compliance with requirements.
3. Perform visual and mechanical inspection and electrical test indicated in:
 - a. NETA ATS, Section 7.5 for switches.
 - b. NETA ATS, Section 7.6 for molded-case circuit breakers.
4. Certify compliance with test parameters.
5. Correct malfunctioning units on-site, where possible.
6. Retest to demonstrate compliance; otherwise, replace with new units and retest.

C. Infrared Scanning

1. Perform an infrared scan of each enclosed switch and circuit breaker.
2. Perform scans after Substantial Completion, but before Final Acceptance.
3. Open or remove doors or panels so connections are accessible to portable scanner.
4. Perform a follow-up scan of each unit 11 months after date of Substantial Completion.
5. Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values.
6. Provide calibration record for device.
7. Prepare certified report identifying equipment checked and describing scanning results.
8. Note deficiencies detected, remedial action taken, and observations after remedial action.

3.5 ADJUSTING

- A. Set field-adjustable circuit-breaker trip ranges.

3.6 CLEANING

A. General

1. After completing installation, inspect interior and exterior of enclosures.
2. Remove paint splatters and other spots.
3. Vacuum dirt and debris; do not use compressed air to assist in cleaning.
4. Repair exposed surfaces to match original finish.

END OF SECTION 26 2816

SECTION 26 2913

MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes
 1. Manual motor controllers.
 2. Magnetic motor controllers.
 3. Combination magnetic motor controllers.
 4. Solid-state reduced voltage motor controllers.
- B. Related Sections
 1. Division 01 Section "Submittal Procedures".
 2. Division 01 Section "Operation and Maintenance Data".
 3. Division 26 Section "Basic Electrical Requirements".
 4. Division 26 Section "Basic Electrical Materials and Methods."
 5. Division 26 Section "Grounding".
 6. Division 26 Section "Supporting Devices".
 7. Division 26 Section "Electrical Identification".
 8. Division 26 Section "Control Devices".
 9. Division 26 Section "Overcurrent Protective Devices".
 10. Division 26 Section "Motor Controllers."

1.3 REFERENCES

- A. Unless otherwise stated, references are to the latest edition of the standard.
- B. Underwriter's Laboratory (UL)
 1. UL 508, "Standard for Industrial Control Equipment."
- C. National Electrical Manufacturers Association (NEMA)
 1. NEMA 250, "Enclosures for Electrical Equipment (1000 Volts Maximum)."
 2. NEMA ICS 2, "Industrial Control and Systems: Controllers, Contactors, and Overload Relays Rated 600 Volts."

1.4 DEFINITIONS

- A. Abbreviations
 1. AHJ: Authority having jurisdiction.
 2. NRTL: Nationally recognized testing laboratory.
 3. SPDT: Single pole double throw.

- B. Seismic Withstand: When subjected to the specified seismic forces, seismic withstand means:
 1. The unit will remain in place.
 2. No parts will separate from the unit.
 3. The unit will be fully operational after the seismic event.
- C. Finished Locations: The following are defined as finished locations:
 1. Areas with carpet or tile floors.
 2. Areas with lay-in ceiling tile, fixed ceiling tile, and special architectural ceiling treatment.
 3. Areas with tiled, plastered, or paneled walls.
- D. Interior Locations: The following are defined as interior locations:
 1. Any location within the boundaries of the foundation of any building.
 2. Any location within the superstructure of other structures not classified as buildings.
- E. Wet Locations: The following are defined as wet locations:
 1. All exterior locations.
 2. All interior locations below grade.
 3. All interior locations where wet materials are processed, pumped, transported, or stored.
- F. Corrosive Locations: The following are defined as corrosive locations.
 1. All locations with chemical feed/transfer equipment
 2. All locations with chemical storage tanks
 3. All locations where chemical storage drums are located.
- G. Hazardous (Classified) Locations: The following are defined as hazardous (classified) locations.
 1. All hazardous (classified) locations and their hazard classification are shown.

1.5 SUBMITTALS

- A. General
 1. Comply with the requirements of Division 01 Section "Submittal Procedures".
 2. Submit information as described below.
 3. Provide all information necessary to determine compliance.
- B. Product Data
 1. Manufacturer's technical product data sheets for all products specified in this section.
 2. Delete or cross out all inappropriate or non-applicable information.
- C. Shop Drawings
 1. Materials List: Submit a list with quantities, manufacturer's name, and catalog numbers.
 2. Dimensional Drawings: Submit dimensional drawings for all products.
 3. Wiring Diagrams: Submit wiring diagrams for all products.
 - a. Show all components and features specified.
 - b. Differentiate between factory installed and field installed wiring and components.
- D. Quality Control Submittals
 1. Test Reports
 - a. Factory test report: Submit results of the required factory test prior to shipment.
 - b. Field test report: Submit certified copies of the field test reports.
 2. Manufacturer's Instructions: Submit manufacturer's current installation instructions.
 3. Manufacturer's field reports.

4. Training data.

E. Contract Closeout Submittals

1. Project record documents.
2. Operation and Maintenance (O&M) Data
 - a. Submit O&M manual prior to delivery of the products.
 - b. Comply with Division 01 Section "Operation and Maintenance Data".
 - c. Include instructions on start-up, operation, and maintenance.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements

1. All applicable federal, state, and local codes and regulatory requirements.
2. National Electrical Code (NEC).

1.7 MAINTENANCE

A. Extra Materials

1. Maintenance stock of fuses amounting to one unit for every installed unit.
2. One main control board for every three solid-state reduced voltage controllers provided.

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

A. General

1. Provide new and unused products of current manufacture.
2. Provide products free from defects affecting performance.
3. Provide units of the same type all made by the same manufacturer.
4. Provide nameplates complying with Division 26 Section "Electrical Identification".

B. Listing and Labeling

1. Provide UL listed and labeled products.
2. Provide products that have been listed and labeled by an approved independent NRTL.
3. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.

2.2 MANUAL CONTROLLERS

A. Manual Controllers

1. Sizes and ratings as indicated on the drawings.
2. Manually operated quick make, quick break toggle mechanism.
3. One piece melting alloy type thermal overload unit.
4. Controller inoperative when thermal unit removed.
5. Green pilot light.
6. Capable of being padlocked in the OFF position.

2.3 MAGNETIC CONTROLLERS

A. Magnetic Contactors

1. Three pole unless otherwise shown.
2. Sizes as shown.

3. NEMA ICS 2 and UL 508.
4. Integral NEMA sizes, minimum size 1.
5. Coil rated for 120 Volts unless otherwise shown.
6. Double break silver-alloy contacts.

B. Full Voltage Non-Reversing (FVNR) Magnetic Controllers

1. Magnetic contactor as specified above.
2. NEMA sizes as shown.
3. Solid-state overload relay as specified in article "ACCESSORIES" below.
4. Control power transformer as specified in article "ACCESSORIES" below.
5. Enclosure as specified in article "ACCESSORIES" below.

C. Full Voltage Reversing (FVR) Magnetic Controllers

1. Two magnetic contactors as specified above.
2. NEMA sizes as shown.
3. Contactors electrically and mechanically interlocked to prevent simultaneous closing.
4. Solid-state overload relay as specified in article "ACCESSORIES" below.
5. Control power transformer as specified in article "ACCESSORIES" below.
6. Enclosure as specified in article "ACCESSORIES" below.

D. Two-Speed Two-Winding Magnetic Controller

1. Two magnetic contactors as specified above.
2. NEMA sizes as shown.
3. Contactors electrically and mechanically interlocked to prevent simultaneous closing.
4. Two solid-state overload relays as specified in article "ACCESSORIES" below.
5. Control power transformer as specified in article "ACCESSORIES" below.
6. Enclosure as specified in article "ACCESSORIES" below.

2.4 SOLID-STATE CONTROLLERS

A. Solid-State Reduced Voltage Controllers (SSRV)

1. Provide types, ratings, and NEMA sizes as shown on the Contract Drawings.
2. Suitable for use with standard 3 phase squirrel cage induction motors.
3. Silicon controlled rectifiers (SCRs) for controlling motor voltages during acceleration.
4. On-board diagnostics with light emitting diodes (LEDs) to indicate fault conditions.
5. Isolated, convertible SPDT fault contact output for remote indication.
6. Adjustable current limit.
7. Solid-state overload relay as specified in article "ACCESSORIES" below.
8. Closed loop feedback system to maintain motor acceleration at constant rate.
9. Magnetic contactors as specified above.
 - a. Bypass contactor.
 - b. Input isolation contactor.
 - c. Contactor for isolating power factor correction capacitors from SCRs.

2.5 COMBINATION CONTROLLERS

A. General

1. Motor controller, short-circuit protection, and disconnecting means.
2. Controller as described above (i.e., FVNR, FVR, SSRV).

B. Short-Circuit Protection

1. Fuse, molded-case circuit breaker, or motor circuit protector as shown.
2. As specified in Division 26 Section "Overcurrent Protective Devices".

C. Disconnecting Means

1. External operating handle with an up-down motion and down position indicating OFF.
2. Lockable in the OFF position with up to three padlocks.

2.6 ACCESSORIES

A. General

1. Mount all accessories in the controller enclosure.
2. If an additional enclosure is required, obtain approval from the Engineer.
3. Construct any additional enclosures equal to the controller enclosure.
4. Provide all required interconnections between the enclosures.
5. Provide equipment nameplates complying with Division 26 Section "Electrical Identification".

B. Solid-State Overload Relay

1. Current sensor in each phase.
2. Switch selectable for the specific motor full load amperes within the starter range.
3. Running overload protection with time-current characteristics closely paralleling that the motors heating damage boundary
4. Accurate to 2 percent.
5. Selectable overload trip class, 5, 10, 15, 20, and 30.
6. Phase failure protection.
7. Current unbalance trip setting adjustable from 10 to 50 percent.
8. Voltage unbalance trip setting adjustable from 5 to 20 percent.
9. Conformally coated to provide corrosion resistance.

C. Control Power Transformer

1. Provide a control power transformer for each motor controller.
2. Secondary voltage to match coil voltage specified above.
3. Provide control power transformers as specified in Section 260900, Control Devices.
4. Size transformer as required to provide adequate capacity to operate the following:
 - a. Motor controller contactor coil.
 - b. All other devices connected to the control circuit as shown.

D. Control Components

1. As specified in Division 26 Section "Control Devices".
2. Type and quantity of control components as shown.
3. For spare controllers or where not shown, provide the following:
 - a. Hand-Off-PLC selector switch.
 - b. Elapsed time meter.
 - c. Green run light.

E. Enclosures.

1. NEMA 250, Type 4X in corrosive locations.
2. NEMA 250, Type 4X in wet locations.
3. NEMA 250, Type 7 in Class I hazardous locations.
4. NEMA 250, Type 12 in all other locations.

2.7 MANUFACTURERS

- A. Manufacturers: Subject to compliance, provide product manufactured by one of the following:
 - 1. Allen-Bradley.
 - 2. Cutler Hammer.
 - 3. Square D.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions
 - 1. Inspect installed work prior to performing the work of this section.
 - 2. Verify that the project has progressed to a point where this installation may begin.
- B. Material inspection.
- C. Discrepancies
 - 1. Immediately notify the Engineer in writing of conditions detrimental to proper completion of the work.
 - 2. Correct all unsatisfactory conditions before proceeding with installation.
 - 3. Resolution must be acceptable to the Engineer.

3.2 PREPARATION

- A. Surface Preparation
 - 1. Carefully lay out the work in advance.
 - 2. Perform any cutting, drilling, etc. without damaging the building surfaces or equipment.
- B. Rough-in
 - 1. Refer to equipment submittals for rough-in requirements.
 - 2. Verify rough-in locations by field measurements.

3.3 INSTALLATION

- A. General
 - 1. Conform to submittal data.
 - 2. Conform to arrangements indicated.

3.4 FIELD QUALITY CONTROL

- A. Inspecting and adjusting
 - 1. Provide a manufacturer trained technician to inspect and adjust the equipment.
 - 2. Adjust motor overload trip setting and class to match motor nameplate.
 - 3. Adjust voltage and current unbalance settings to protect motor without nuisance trips.
 - 4. Adjust acceleration and deceleration times to prevent pressure surges in water lines.
 - 5. Make other adjustments to solid state controllers as required for proper operation.
- B. After completion of all inspections, perform field testing.
- C. Training

1. Train the Owner's personnel in the operation and maintenance of the products.
2. Complete all testing and adjustments before starting on training.
3. Provide for the services of a manufacturer's representative to perform the training.
4. Provide for a minimum of 4 hours of training for 6 people.

END OF SECTION 26 2913

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 26 2923

VARIABLE FREQUENCY DRIVES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. General

1. Drawings and general provisions of Contract.
2. General and Supplementary Conditions.
3. Division 01 Specification Sections.

B. Related Sections. The following sections contain requirements that relate to this section:

1. Division 26 Section "Motor Control Centers".
2. Division 26 Section "Overcurrent Protective Devices".
3. Division 26 Section "Control Devices".
4. Division 40 Section "Instrumentation – General".

1.2 DESCRIPTION OF WORK

A. Scope of Work.

1. Extent of variable frequency drive work is shown on the drawings and specified herein.
2. Provide all labor, materials, tools, and equipment necessary to perform the work.

B. Section Includes. Materials and equipment specified in this section include the following:

1. Variable Frequency Drives (VFDs).
2. Drive Accessories.

1.3 QUALITY ASSURANCE

A. Regulatory Requirements

1. National Electrical Code (NEC).
2. All applicable federal, state, and local codes and regulatory requirements.

B. Standards: Materials and workmanship shall conform to the following standards:

1. National Fire Protection Association (NFPA).
2. Underwriters' Laboratories, Inc. (UL).
3. Institute of Electrical and Electronic Engineers (IEEE).
4. National Electrical Manufacturers Association (NEMA).

C. Qualifications

1. Manufacturer: Firms engaged in the manufacture of VFDs for not less than 5 years.

1.4 SUBMITTALS

A. Product Data

1. Manufacturer's technical product data sheets for the VFD and all accessories.
2. Delete or cross out all inappropriate or non-applicable information.

- B. Shop Drawings
 1. Dimensional drawings showing enclosure size and arrangement of all components.
 2. Wiring diagrams in ladder logic form with terminal and wire numbers. Differentiate between factory installed and field installed wiring and components.
 3. Indicate job name, Owner, location, and date on all shop drawings.
- C. Material list giving quantities, manufacturer's name, and catalog numbers.
- D. Operation and Maintenance (O&M) Manual with the following:
 1. Maintenance data.
 2. Parts list.
 3. Troubleshooting guide.
 4. Product data
 5. Wiring diagrams.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver VFDs and accessories packaged in factory fabricated containers.
- B. Store VFDs and accessories in a clean dry space.
- C. Handle variable frequency drives and accessories carefully to avoid damage.
- D. Return damaged units to equipment manufacturer and replace with new units.

PART 2 - PRODUCTS

2.1 VARIABLE FREQUENCY DRIVES.

- A. General
 1. Provide VFDs of sizes, ratings, and torque characteristics required by the driven equipment.
 2. Provide listed and labeled controllers and components.
 3. All drives on the project shall be the same manufacturer and series/class.
 4. Comply with the following:
 - a. NEMA Standard ICS 2, "Industrial Control Devices, Controllers and Assemblies,"
 - b. NEMA Standard ICS 3.1, "Safety standards for Construction and Guide for Selection, Installation and Operation of Adjustable Speed Drive Systems."
 - c. NEMA Pub No.250, "Enclosures for Electrical Equipment (1000 Volts Maximum)."
 - d. UL 508C
 5. Provide drives suitable for use with standard squirrel-cage induction motors having a 1.10 service factor.
 6. Construction
 - a. Full wave 6-pulse rectifier section.
 - b. Direct current (dc) filter section
 - c. Pulse width modulated (PWM) inverter section.
- B. Features
 1. Designed to shut down without damage under the following conditions:
 - a. Short circuit.

- b. Overcurrent.
 - c. Over voltage.
 - d. Under voltage.
 - e. Loss of phase.
 - f. Over-speed.
 - g. Power unit over-temperature.
2. Selectable sensor-less vector or Volts per Hertz operating modes.
 3. Multiple programmable stop modes including: ramp, coast, dc brake, ramp-to-hold, and s-curve.
 4. Energy saving mode to automatically reduce output voltage to a lightly loaded motor.
 5. Built-in process control algorithm.
 6. Electronic motor overload protection.
 7. Input line fuses.
 8. Output voltage regulator.
 9. Status LEDs for power and communications.
 10. Door mounted operator interface with the following features:
 - a. Membrane keypad with keys for the following:
 - 1) Drive programming.
 - 2) Numeric.
 - 3) Stop and stop.
 - 4) Automatic/Manual.
 - 5) Speed increase/decrease.
 - b. Back-lit seven-line, 21 character LCD display.
 11. Drive parameters stored in EEPROM and re-settable through the keypad.
 12. Password security.
 13. Process signal inverter to allow speed of drive to vary inversely with input signal.
 14. Three programmable skip frequencies.
 15. Capable of picking up a load spinning in either direction without tripping drive.
 16. All components factory mounted and wired.
 17. User programmable inputs and outputs (I/O).
 - a. Minimum of two analog inputs, 4-20 mA, isolated.
 - b. Minimum of two analog outputs, 4-20 mA, isolated.
 - c. Minimum of six digital inputs, and two relay outputs.
 18. Ethernet/IP communications.

C. Sizes and Ratings

1. Input Voltage: 480 Volt, three-phase, $\pm 10\%$.
2. Input Frequency: 60 Hertz (Hz), ± 3 Hz.
3. Displacement Power Factor: Between 1.0 and 0.95 lagging.
4. Efficiency: Greater than 96 percent.
5. Output Voltage: Three phase, variable from 0 to 460V.
6. Output Frequency: Variable from 6 to 400 Hz, minimum.
7. Speed Range: 10:1, step-less.
8. Acceleration/Deceleration Rate: Adjustable from 0 to 3600 seconds.
9. Minimum Frequency: Adjustable from 6 to 30 Hz.
10. Maximum Frequency: Adjustable from 60 to 120 Hz.
11. Current Limit: Adjustable from 100 to 150 percent.
12. PWM Carrier Frequency: Adjustable from 2 to 10 kHz.
13. Ambient Temperature Range: 0 to 40 degrees Celsius.
14. Relative Humidity Limit: 95 percent non-condensing.
15. Constant Torque / Heavy Duty rated (125% of installed motor FLA)

2.2 ACCESSORIES.

A. Control Components

1. As specified in Division 26 Section "Control Devices," and as shown on the drawings.
2. If not otherwise shown, provide a Hand-Off-PLC selector switch, fused control power transformer, green run pilot light, and red fault light.

B. Enclosures

1. Configured as motor control center unit compartment where shown as part of a motor control center.
2. Mount VFDs in NEMA Type 12 enclosures where not shown as part of a motor control center.
3. Coat the enclosures with the manufacturer's standard color finish.

C. Drive Accessories

1. Input line reactor, 3 percent impedance.
2. Input isolation contactor.
3. Output dV/dt filter.

2.3 EQUIPMENT/SYSTEM IDENTIFICATION

- ### A. Provide equipment/system identification nameplates complying with Division 26, Section "Electrical Identification".

2.4 MANUFACTURERS

- ### A. Manufacturers: Subject to compliance with requirements, provide VFDs by one of the following:
1. Allen-Bradley Company.
 2. Eaton Corporation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. General

1. Examine areas where VFDs are to be installed.
2. Notify the Engineer in writing of conditions detrimental to proper completion of the work.
3. Do not proceed with the work until unsatisfactory conditions have been corrected in a manner acceptable to the Engineer.

3.2 INSTALLATION

A. General

1. Install VFDs in accordance with the manufacturer's written instructions and recognized industry practices.
2. Comply with requirements of NEC, UL and NEMA standards.
3. Install fuses of sizes indicated in each fusible disconnect switch.
4. Tighten connectors and terminals in accordance with manufacturer requirements, UL Standards 486A/486B, and the NEC.

- B. Grounding
 - 1. Provide equipment grounding connections for VFDs and enclosure as indicated.
 - 2. Tighten connections to comply with tightening torque specified in UL Standard 486A/486B.

- C. Start-up and Programming
 - 1. Upon completion of the VFD installation, provide for the services of a certified factory service technician to inspect and approve the installation and to program and start-up the drives.
 - 2. Program the drive command, set-up, and motor parameter settings to match the requirements of the motor, the control diagrams and control descriptions.
 - 3. All drive communication programming shall be provided by the System Integrator under Division 40, Section "Instrumentation – General". Provide any information necessary to allow the System Integrator to perform the required programming. Programming shall include all network addressing and the reading from or writing to of a minimum of eight registers in each drive.

- D. Testing
 - 1. Provide all equipment required for testing, start-up and performance verification.
 - 2. Testing shall be witnessed by the Engineer. The Engineer shall be notified at least 48 hours in advance of testing. The current and voltage and power factor shall be monitored at the motor control center or switchboard feeding the controller being tested. Data shall be collected for each motor at rated load and speed with all motors running at rated load and speed.
 - 3. Prior to energizing of motor controllers, check with ground resistance tester phase-to-phase and phase-to-ground insulation resistance levels to ensure manufacturer's requirements are met. Units not acceptable shall be replaced.
 - 4. Harmonic Testing. Testing shall be witnessed by the Engineer. The Engineer shall be notified at least 48 hours in advance of testing. The current and voltage harmonic distortion and power factor shall be monitored at the motor control center or switchboard feeding the controller being tested with a BMI Model 3030 harmonic analyzer or equal. Data shall be collected for each motor at rated load and speed with all motors running at rated load and speed. Sufficient data shall be collected to prepare a report to compare the harmonic content of the system to the calculated values in the analysis submitted in accordance with Part 1 of this specification.

3.3 FIELD QUALITY CONTROL

- A. General
 - 1. Prior to energizing the drives, check the phase-to-phase and phase-to-ground insulation resistance levels with ground resistance tester to ensure that requirements are fulfilled.
 - 2. Prior to energizing, check circuitry for electrical continuity and for short circuits.
 - 3. Verify that direction of rotation of each motor is correct.

- B. Operational Demonstration
 - 1. Upon completion of installation of the VFDs, energize drive circuitry and demonstrate proper functioning of the equipment in accordance with requirements.
 - 2. Where possible, correct malfunctioning units at site, then retest to demonstrate compliance; otherwise, remove and replace with new units, and retest to demonstrate compliance.

3.4 TRAINING

A. General

1. Provide for the services of a manufacturer-trained and certified representative to train the Owner's personnel in the proper operation and maintenance of the VFDs.
2. Provide training for a minimum of 6 people.
3. Total training time shall be 4-hours minimum per person.

B. Topics covered shall include:

1. Safety.
2. Keypad/display interface.
3. Programming, setup, and configuration.
4. Operational indicators.
5. Faults, diagnostic tools, troubleshooting, and preventive maintenance.

C. Provide documentation for each attendee including equipment manuals, drawings and schematics of equipment supplied for this project.

3.5 ADJUSTING AND CLEANING

- A. Adjust operating mechanisms, where necessary, for free mechanical movement.
- B. Touch up scratched or marred enclosure surfaces to match original finishes.

END OF SECTION 26 2923

SECTION 26 4300

SURGE PROTECTIVE DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

- A. Summary: These specifications describe the electrical and mechanical requirements for a modular, high-energy surge protective devices (SPDs) to be located where shown on the drawings.
- B. Related Sections include the following:
 - 1. Division 26 Section "Wiring Devices".
 - 2. Division 26 Section "Switchboards".
 - 3. Division 26 Section "Panelboards".
 - 4. Division 26 Section "Motor Control Centers".
- C. Standards: The specified system shall be designed, manufactured, tested and installed in compliance with the following codes and standards:
 - 1. Underwriters Laboratories; UL 1449 3rd Edition 2009 Revision (effective 9/29/2009)
 - 2. Institute of Electrical and Electronic Engineers (ANSI/IEEE C62.34, C62.41, C62.45)
 - 3. Institute of Electrical and Electronic Engineers 1100 Emerald Book
 - 4. Federal Information Processing Standards Publication 94 (FIPS PUB 94)
 - 5. National Fire Protection Association (NFPA 20, 70, 75 and 780)

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Manufacturers shall submit independent test data from a nationally recognized testing laboratory verifying the following: life cycle testing, overcurrent protection, UL1449 3rd Edition, noise attenuation and surge current capacity. Failure to do so will result in product disapproval.
- B. Equipment Manual: The manufacturer shall furnish an installation manual with installation, startup, and operating instructions for the specified system.
- C. Drawings: Electrical and mechanical drawings shall be provided by the manufacturer that show unit dimensions, weights, component and connection locations, mounting provisions, connection details and wiring diagram.

1.4 QUALITY ASSURANCE

- A. Codes: Perform all work in compliance with NFPA 70, National Electrical Code (NEC) and all applicable federal, state, and local codes and regulatory requirements.

- B. Manufacturer: The specified interconnect assembly shall be designed and manufactured in the USA by a qualified manufacturer of SPD products. The manufacturer shall have at least 5 years experience in the design, testing, and manufacturing of surge protective devices.
- C. Installer: Minimum of 3 years successful installation experience on projects utilizing equipment similar to that required for this project.
- D. Source Limitations: Obtain suppression devices and accessories through one source from a single manufacturer.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.5 PROJECT CONDITIONS

- A. Service Conditions: Rate surge protective devices for continuous operation under the following conditions, unless otherwise indicated:
 1. Operating Frequency: 50 or 60 Hz.
 2. Operating Temperature: -40 to 140 deg F.
 3. Humidity: 0 to 95 percent, non-condensing.
 4. Operating Altitude: 0 to 18,000 feet above sea level.
- B. Warranty: The manufacturer shall provide a (5) (10)-year full parts replacement warranty

1.6 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Replaceable Protection Modules: One of each size and type installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:
 1. Liebert Corp.
 2. Thor Systems, Inc.
 3. Phoenix Contact.
 4. Current Technology.
 5. DEHN.
 6. Protection Technology.
- B. The SPD terminals shall accommodate the wire sizes as shown on the drawings.

2.2 REQUIREMENTS

- A. Performance Ratings:
 1. Surge Current Capacity – Service Entrance and main distribution panels shall be UL Listed Type 1 SPD with a 200 kA Surge Rating per Mode.

2. Surge Current Capacity –Branch panels shall be UL Listed Type 2 SPDs with a 100 kA Surge Rating per Mode.
3. UL 1449 Nominal Discharge Current: The UL 1449 Nominal Discharge Current Rating shall be 20kA.
4. Protection Modes: The SPD shall provide protection in all modes: L-N or L-L, L-G and N-G (where applicable). Note: L = Line, G = Ground, N = Neutral
5. UL 1449 Voltage Protection Ratings: The maximum UL 1449 listed surge ratings for each and/or all of the specified protection modes shall not exceed the following:

System Voltage	UL 1449 Second Edition SVR				UL 1449 3 rd Edition VPR			
	L-N	N-G	L-G	L-L	L-N	N-G	L-G	L-L
120/240	400V	400 v	400 v	800 v	800 v	700 v	900 v	1200 v
120/208	400 v	400 v	400 v	800 v	800 v	700 v	900 v	1200 v
240			800 v	800 v			1200 v	2000 v
277/480	700 v	700 v	700 v	1500 v	1200 v	1200 v	1200 v	2000 v
480			1500 v	1500 v			2000 v	2000 v

- B. Life Cycle Testing: The SPD shall be life cycle tested to withstand 10kA (8x20µs), 20kV (1.2x50µs), IEEE C62.41 Category C surge current with less than 5% degradation of clamping voltage. The service entrance and main distribution panel SPDs shall withstand a minimum of 15,000 Category C 10kA Surges per Mode. Branch panel SPDs shall withstand a minimum of 6,000 Category C 10kA Surges per mode.
- C. Overcurrent Protection: Fusing: All surge suppression components shall be individually fused and rated to allow maximum specified surge current capacity with an interrupting rating greater than the available short circuit current. Devices that utilize a single fuse to protect two or more suppression paths are not excepted. Replaceable fusing is unacceptable. Overcurrent protection that limits specified surge currents is not acceptable. Where the available short circuit current is not shown, the fusing shall be rated for 200kAIC.

2.3 SERVICE ENTRANCE SUPPRESSORS

- A. Surge Protective Device Description: Modular design with field-replaceable modules and the following features and accessories:
 1. Fuses, rated at 200-kA interrupting capacity.
 2. Fabrication using bolted compression lugs for internal wiring.
 3. Integral disconnect switch.
 4. Redundant suppression circuits.
 5. Redundant replaceable modules.
 6. LED indicator lights for power and protection status.
 7. Audible alarm, with silencing switch, to indicate when protection has failed.
 8. One set of Form C contacts, for remote monitoring of protection status.
 9. Surge-event operations counter.
 10. NEMA 4X Enclosure.

2.4 PANELBOARD SUPPRESSORS

- A. Surge Protective Device Description: Modular design with field-replaceable modules and the following features and accessories:
 1. Fuses, rated at 200-kA interrupting capacity.
 2. Fabrication using bolted compression lugs for internal wiring.
 3. Integral disconnect switch.

4. Redundant suppression circuits.
5. Redundant replaceable modules.
6. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
7. LED indicator lights for power and protection status.
8. Audible alarm, with silencing switch, to indicate when protection has failed.
9. One set of Form C contacts for remote monitoring of protection status. Coordinate with building management system.
10. Surge-event operations counter.
11. NEMA 4X Enclosure.

PART 3 - EXECUTION

3.1 INSTALLATION OF SURGE PROTECTIVE DEVICES

- A. The installing contractor shall install the SPD with as short of conductors as practically possible and twist the SPD input conductors together to reduce conductor inductance. The contractor shall follow the SPD manufacturer's recommended installation practices as found in the installation, operation and maintenance manual and comply with all applicable codes. Type 2 SPDs shall be connected to circuit breakers or fuses as required by the SPD's UL Listing.

3.2 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A/486B.

3.3 FIELD QUALITY CONTROL

- A. Testing: Perform the following field quality-control testing:
 1. After installing surge protective devices, but before electrical circuitry has been energized, test for compliance with requirements.
 2. Complete startup checks according to manufacturer's written instructions.
 3. Perform each visual and mechanical inspection and electrical test stated in NETA ATS, Section 7.19. Certify compliance with test parameters.
- B. Repair or replace malfunctioning units. Retest after repairs or replacements are made.

END OF SECTION 26 4300

SECTION 40 0513

PROCESS PIPING

PART 1 - GENERAL

1.1 REFERENCE

- A. All applicable requirements of other portions of the Contract Documents apply to the Work of this Section, including but not limited to Division 01 General Requirements.

1.2 DESCRIPTION OF WORK

- A. Exposed, buried, interior and exterior process piping.
- B. Piping associated with the following processes:
 - 1. All Water Treatment Process Piping
 - 2. All Process Waste Piping
 - 3. Compressed and Low Pressure Air Piping
 - 4. Membrane Cleaning System (MCS) Piping
 - 5. All chemical feed piping
 - 6. Sample water piping
- C. Process piping excludes the following:
 - 1. Piping associated with HVAC systems.
 - 2. Piping associated with plumbing and sanitary waste systems.
 - 3. Storm drainage piping.
 - 4. Gutters and downspouts.
 - 5. Water distribution system.

1.3 QUALITY ASSURANCE

- A. General: All materials shall be free from defects impairing strength and durability and be of the best quality for the purposes specified or shown on the Drawings. It shall have structural properties sufficient to solely sustain or withstand strain and stresses to which it is normally subjected and be true to detail.
- B. Manufacturer's Qualifications
 - 1. Provide piping and appurtenances that are the standard product in regular production by Manufacturers whose products have proven reliable in similar service for at least two years.
 - 2. Provide piping and appurtenances of the same type from a single manufacturer.
 - 3. All castings used for coupling housings, fittings, and valve bodies shall be date stamped for quality assurance and traceability.
 - 4. All grooved joint couplings, fittings, valves, and specialties shall be the products of a single manufacturer. Grooving tools shall be of the same manufacturer as the grooved components

- C. The Contractor shall be responsible for making all field measurements prior to installation of his work. Any deviations in measurements between the field conditions and the Drawings shall be immediately reported to the Engineer.
- D. Testing
 - 1. Manufacturer's certified test results as defined for the type of pipe shall be stamped approved by the Contractor and forwarded to the Engineer as a Reference Submittal. No pipe shall be installed which does not meet the requirements of these Specifications.
 - 2. All pipe, joints, and fittings shall be pressure tested as required by this Specification for the type of pipe. The Contractor shall notify the Engineer or Owner, in writing, at least 48 hours prior to performing the tests.
- E. All materials furnished under this Section shall have NSF 61 approval.

1.4 SUBMITTALS

- A. Provide technical submittals in accordance with Division 01 Section "Submittal Procedures", demonstrating piping and accessories conform completely to the requirements of this Section.
- B. Product Data
 - 1. Catalog cut sheets and description of all items.
 - 2. Construction materials.
 - 3. Standard diameters, wall thicknesses and other pertinent dimensions of all sizes of piping and accessories.
 - 4. Support and anchor details with manufacturer's maximum recommended loads.
 - 5. Design calculations indicating support spacing requirements for all size pipe.
- C. Shop Drawings
 - 1. Complete piping layout indicating type of pipe, diameter and location. Show dimensions from adjacent structure, equipment and other piping.
 - 2. Location of all pipe joints, sleeves, valves, and couplings.
 - 3. Location of all pipe supports and anchors.
 - 4. Details of pipe anchors, supports, couplings, and joints.
 - 5. Grooved joint couplings and fittings may be shown on drawings and product submittals, and shall be specifically identified by the manufacturer's style or series designation.
- D. Testing: Copies of all field test reports.
- E. Contractor shall verify chemical compatibility of piping, solvents, gaskets, seals, o-rings, etc. for each chemical feed system. Provide chemical compatibility charts and manufacturer's written verification of compatibility for each chemical feed system.

1.5 HANDLING, DELIVERY, AND STORAGE

- A. General
 - 1. Handling, delivery, and storage shall be in accordance with the manufacturer's recommendations.
 - 2. In no case shall the pipe or appurtenance be dumped, dropped, or thrown.
 - 3. Interiors of piping shall be completely free of dirt and foreign matter.

PART 2 - PRODUCTS

2.1 AMERICAN IRON AND STEEL REQUIREMENTS

- A. This project is being funded in part with loan and loan forgiveness funds from the Ohio EPA WSRLA Program and is subject to American Iron and Steel (AIS) requirements. See Division 00, Section "OEPA WSRLA Program Requirements."

2.2 PIPING

A. General

1. The outside of all piping, valves, and fittings shall bear the Manufacturer's standard marking for type, pressure, etc.
2. All pipe and fittings shall be equal to or better than the grade specified.
3. Whenever Specifications call for close bending or coiling, use Grade B pipe.
4. All piping material shall be new and free from defects and shall be subject to standard mill test before being shipped. No salvaged or used pipe shall be used.
5. Pipe shall be labeled.
6. Fittings shall have the Manufacturer's name or trademark legibly raised or cut into each piece, and shall bear the Manufacturer's standard marking for type, pressure, etc.
7. All pipe shall be cut off even and reamed full bore. Threads shall be cut smooth, true and to full standard size. Piping shall be installed clean of chips, burrs or oil.
8. Victaulic grooved fittings and couplings and valves may be utilized in lieu of welded, threaded, or flanged joints as shown on the Drawings. Gasket selection and intended use shall be verified as suitable for the intended service as published in the manufacturer's latest literature. Installation shall be in accordance with the coupling manufacturer's latest published instructions.

B. Hardware

1. Unless indicated otherwise, provide hardware of the following materials for all piping/valve hardware (bolts, nuts, and washers).
 - a. Exposed (painted): Zinc Plated.
 - b. Exposed (unpainted): 304 SST.
 - c. Buried: 316 SST or Cor-Blu.
 - d. Submerged: 316 SST.
2. Provide a washer under each nut and under each bolthead. Washers shall be of the same material as the bolts.
3. Lubricant shall be TRX-Synlube by Ramco, Anti-Seize by Ramco, Husk-It Husky Lube O'Seal, or equal.

C. Ductile Iron Pipe (DIP or DI)

1. Pipe
 - a. Standards
 - 1) Flanged: ANSI/AWWA C115/A21.15.
 - 2) Nonflanged: ANSI/AWWA C151/A21.51.
 - 3) Thickness Class: 53 (Unless noted otherwise on Drawings).
 - b. Lining
 - 1) Cement-mortar lining (All piping, unless indicated otherwise in the piping schedule)
 - a) ANSI/AWWA C104/A21.4.
 - 2) Glass Lining (where indicated in the piping schedule)
 - a) Glass Lining: Vitreous material that is smooth, continuous and formulated to prevent the adherence of grease, scum and crystalline

metal salt deposits in sludge, scum and related process piping systems in wastewater and sewage treatment systems.

- b) Provide lining consisting of two coats, separately applied and separately fired at a maturing temperature of approximately 1400 degrees F (760 degrees C) creating a molecular bond with the base metal and a total minimum lining thickness of 8-10 mils.
 - c) Lining minimum hardness: 5-6 on the MOHS scale.
 - d) Provide lining capable of withstanding an instantaneous thermal shock of 350 degrees F (195 degrees C) differential without crazing, blistering or spalling.
 - e) Provide lining capable of withstanding a strain of 0.001 inch/inch (0.025 mm/mm), the yield point of the base metal, without damage to the glass lining.
 - f) Provide lining resistant to corrosion of between pH of 3 to 10.
 - g) Fabricators: Custom-Fab or Engineer Approved Equal.
- c. Grooved end pipe shall be Class 53 (min), with ends that comply with ANSI / AWWA C606.
- d. Coating
- 1) Buried pipe: 1 mil asphalt coating, AWWA C151.
 - 2) Exposed pipe to be painted: Factory prime coat compatible with finished coat system.
2. Joints
- a. Types: As shown on the Drawings—grooved joints are acceptable at locations where flanged joints are shown on the drawings. If not designated, use grooved or flanged joints for exposed piping and mechanical joints for buried pipe. Use grooved joints upstream and downstream of flow meters.
 - b. Flanged
 - 1) Ductile iron, ANSI A21.10.
 - 2) Bolt Circles and Bolt Holes: Class 125.
 - 3) Gaskets: 1/8 inch EPDM full faced.
 - c. Grooved
 - 1) ANSI/AWWA C606
 - 2) Grooved joint couplings shall consist of two or more ductile iron housings to ASTM A536.
 - 3) Gaskets: FlushSeal pressure responsive gasket to ASTM D2000.
 - 4) Housing: Ductile Iron with coal tar epoxy coating (min 3 mils).
 - 5) Bolts and nuts: 316 SST.
 - 6) Basis of Design: Victaulic Style 31.
 - d. Mechanical or Push-on
 - 1) ANSI A21.11.
 - 2) Gaskets: plain tipped.
 - e. Restrained
 - 1) Provide restrained joints on all buried pipe joints.
 - 2) Restraining wedges shall be made of ductile iron; conform to ASTM A536.
 - 3) Restraint at pipe joints (\geq 24-inch):
 - a) TR Flex by US Pipe.
 - b) Super-Lock or Restrained Tyton Joint by Clow.
 - c) Flex-Ring or Lok-Ring by American Cast Iron Pipe Company.
 - 4) Restraint at pipe joints ($<$ 24-inch):
 - a) All products acceptable for pipe \geq 24-inch
 - b) Flex-ring by US Pipe.

- c) Lok-Ring by American Cast Iron Pipe Company.
3. Fittings
- a. Types: As shown on the Drawings—grooved fittings are acceptable at locations where flanged fittings are shown on the drawings. If not designated, use flanged fittings for exposed piping and mechanical fittings for buried pipe.
 - b. Flanged: ANSI/AWWA C110/A21.10.
 - c. Grooved
 - 1) Comply with ANSI A21.10 /AWWA C110 for center to end dimensions, and ANSI A21.10 /AWWA C110 or AWWA C153 for wall thickness, with ends to AWWA C606.
 - 2) Basis of Design: Victaulic AWWA Fittings.
 - d. Mechanical joint
 - 1) Full body ANSI/AWWA C110/A21.10 or short body ANSI/AWWA C153/A21.53.
 - e. Pressure rating: 250 psi minimum.
 - f. Coating and lining: Identical to connecting piping.
 - g. Base tees and bends: Drill and furnish with anchor bolts. Machine when used as pipe kicker.
 - h. Restrained
 - 1) Provide restrained joints on all buried pipe fittings.
 - 2) Restraining wedges shall be made of ductile iron; conform to ASTM A536.
 - 3) Provide a full length of pipe on both sides of the fitting.
 - 4) Restraint at fittings and valves
 - a) Megalug by EBAA Iron Sales.

D. Prestressed Concrete Cylinder Pipe (PCCP)

- 1. Prestressed concrete cylinder pipe and fittings shall be manufactured by Thompson Pipe Group, Grand Prairie, TX or equal.
- 2. Unless otherwise specified, the design materials and workmanship for pipe shall conform to the requirements of AWWA C301. Core and coating thickness for pipe shall be as specified in AWWA C301.
- 3. Design Conditions
 - a. Pipe shall be designed in accordance with the AWWA C304 Standard, using the following design conditions; these conditions shall also be used in designing fittings that include a Portland cement mortar interior and exterior coating of the steel cylinder:
 - b. Pipe shall be designed for an external live loading, including impact, equal to AASHTO H-20 loading with earth cover as shown
 - c. Service Conditions:
 - 1) Liquid Service: Water
 - 2) pH range of contents: 6.0 to 8.5
 - 3) Design working pressure: 40 psi.
 - 4) Design transient pressure: 56 psi.
 - 5) Field test pressure shall be 50 psi.
 - 6) Pipe overburden and trench bedding condition: as shown on Drawings.
- 4. The pipe core shall be produced by the centrifugal method or the vertical casting method.
- 5. Materials
 - a. Cement shall be Type II and shall be in accordance with ASTM C150.
 - b. Mortar coating shall consist of one part cement to a maximum of three parts fine aggregate by weight. Rebound not to exceed one fourth of the total mix weight may be used provided the rebound is treated as fine aggregate.

- c. Wire shall be a minimum of No.6 gauge and shall meet the requirements of ASTM A648, Class III. Wire of a class strength greater than Class III will not be permitted.
 - d. Steel cylinders shall be No. 16 gauge minimum thickness and shall be hot rolled.
 - 6. Fittings
 - a. Steel thickness of all fittings shall be designed in accordance with Chapter 8 of the AWWA M9 Manual. Fittings shall be designed for the same conditions as the adjacent pipe.
 - b. Fabrication of the fittings shall be as per AWWA M9 manual and C301.
 - c. Interior and exterior concrete/mortar coating shall be as per AWWA C301.
 - 7. Joints
 - a. Bell and spigot joint rings shall be steel, self-centering type, and otherwise specified in AWWA C301. Surfaces of the joint rings that will be exposed after fabrication is complete shall receive a zinc metalized coating of 4 mils thickness (0.004").
 - b. Provide restrained joints by field welding joints or by mechanically restrained joints.
 - c. The rubber gaskets shall be in accordance with AWWA C301 and shall be designed and manufactured so that the completed joint will withstand an internal water pressure in excess of the highest pressure to which the pipe will be subjected without showing any leakage by the gasket or displacement of it.
 - d. Bell and spigot wall fittings shall be the manufacturer's standard design. Wall fittings shall be supplied with adequate bracing to keep them round and true during transportation and installation.
- E. PVC Pipe and Fittings
 - 1. Pipe:
 - a. Schedule 80.
 - b. Provide standard lengths of pipe sizes 10-inch and larger, beveled at each end by the pipe manufacturer.
 - 2. Material:
 - a. Type I, Grade I (Class 12454) conforming to ASTM D 1784.
 - 3. Nipples:
 - a. Short nipples shall be the same as the PVC pipe.
 - 4. Fittings:
 - a. Fittings shall be schedule 80 and shall conform to ASTM D 2464 for threaded fittings 6-inches and smaller and ASTM D 2467 for socket-type fittings 8-inches and smaller. For threaded fittings larger than 6-inches and for solvent welded fittings larger than 8-inches the fittings shall be schedule 80 per the manufacturer's standards. All fittings shall successfully pass the required pressure test. All fittings shall be manufactured in the USA by an ISO 9002 manufacturer.
 - 5. Flanges:
 - a. PVC flanges shall be made of the same material as the pipe. Flanges shall match the bolt pattern of ANSI B16.5, Class 150. Flanges shall be flat face.
 - b. Gaskets shall be full faced, low torque, molded EPDM with dual concentric, convex sealing rings (and PTFE bonded to the rubber). The dimensions shall comply with 150# ANSI B16.5 drilling.

6. Unions
 - a. Unions shall have socket-type ends, EPDM o-rings (unless noted otherwise), and shall be schedule 80. Material shall be Type 1, Grade I (Class 12454) per ASTM D 1784.
 - b. Provide Unions at connections to equipment, valves, and other accessories to facilitate equipment removal.
 7. Joints
 - a. Pipes less than 8-inch diameter:
 - 1) Pipe and fitting joints shall be socket welded.
 - 2) Screwed joints that are necessary to match up to threaded valves or fittings shall be made up with Teflon Tape only.
 - b. Pipes 8-inch diameter and larger:
 - 1) Grooved Joints.
 - 2) Grooved joint couplings shall consist of two or more ductile iron housings to ASTM A536.
 - 3) Gaskets: EPDM (Grade E).
 - 4) Housing: Ductile Iron orange enamel coating.
 - 5) Bolts and nuts: 316 SST.
 - 6) Basis of Design: Victaulic Style 357 coupling with PGS-300 groove profile.
 - c. Connections to valves, pumps, and equipment:
 - 1) Provide flanges. Flanged joints shall be made with solvent welded PVC flanges.
 8. Solvent Cement:
 - a. IPS Corporation Weld-On 724 without exception.
 9. Threaded ends:
 - a. Taper pipe threads. All threaded female fittings shall be 316 stainless steel reinforced.
 10. Manufacturer
 - a. Pipe: Harvel or equal.
 - b. Fittings: Spears or equal.
- F. Polyvinyl Chloride Pipe (PVC) C900
1. Pipe: Conform to AWWA C900.
 2. Dimension Ratio: DR-14 (unless noted otherwise on Drawings).
 3. Pressure Class: 300 psi (unless noted otherwise on Drawings).
 4. Joints: Flexible elastomeric, conform to ASTM D3139.
 5. Gaskets: Conform to ASTM F477.
 6. Fittings: Fully restrained ductile iron.
 7. PVC Resin: Meet or exceed cell class 12454 as defined in ASTM D1784.
 8. Pipe shall be homogeneous throughout; free from voids, cracks, inclusions or other defects. Surfaces shall be free from nicks, scoring, scratches, and other blemishes.
 9. Color: Green
 10. Manufacturer/Product name: JM Eagle/Blue Brute or equal.
- G. Polyvinyl Chloride Pipe (PVC) D3034/F679
1. Pipe: Conform to ASTM D3034/F679.
 2. Dimension Ratio: DR-26 unless otherwise noted on Drawings.
 3. Pressure Class: PS115 unless otherwise noted on Drawings.
 4. Joints: Flexible elastomeric, conform to ASTM D3212.
 5. Gaskets: Conform to ASTM F477.
 6. PVC Resin: Meet or exceed cell class 12364 as defined in ASTM D1784.

7. Pipe shall be homogeneous throughout; free from voids, cracks, inclusions or other defects. Surfaces shall be free from nicks, scoring, scratches, and other blemishes.
8. Color: Green
9. Manufacturer/Product name: JM Eagle/Ring-Tite PVC Gravity Sewer or equal.

H. High Density Polyethylene (HDPE)

1. Pipe: Conform to AWWA C901/906.
2. Dimension Ratio: DR-17 (unless noted otherwise on Drawings).
3. Pressure Class: 125 psi (unless noted otherwise on Drawings).
4. Joints: Heat fusion per ASTM D2657.
5. Resin: PPI TR-4 PE 4710, per ASTM D3350 Cell Class 445574 C/E.
6. Color: Black with green stripes.
7. Manufacturer/Product name: JM Eagle or equal.

I. Dual Wall Corrugated High Density Polyethylene (DWC-HDPE)

1. Pipe: Conform to ASTM F2648.
2. Joints: Soil tight bell and spigot, conform to AASHTO M294, or ASTM F2306.
3. Gaskets: Conform to ASTM F477
4. Resin: Cell classification 435420C (ESCR Test Condition B), as defined in ASTM D3350 except carbon black content should not exceed 4%.
5. Manufacturer/Product name: Advanced Drainage Systems, Inc./N-12

J. Single Wall Corrugated High Density Polyethylene (SWC-HDPE)

1. Pipe: Conform to AASHTO M252.
2. Perforations: Conform to AASHTO M252 Class II.
3. Joints: Soil tight couplings, conform to AASHTO M252 or M294.
4. Fittings: Conform to AASHTO M252.
5. Gaskets: Conform to ASTM D1056 Grade 2A2.
6. Resin: Cell classification 424420C, as defined in ASTM D3350 except carbon black content should not exceed 4%.
7. Manufacturer/Product name: Advanced Drainage Systems, Inc./Single Wall Highway Pipe.

2.3 STAINLESS STEEL PIPE

A. All stainless steel pipe and fittings shall be fabricated from Type 304 stainless steel Schedule 10S sheet and plate.

1. Pipe
 - a. Pipe shall conform to ASTM A-312 and be die-formed or rolled true to dimension and round within the applicable ANSI Standard. The two edges of sheet shall be brought to line so as not to leave a shoulder on the inside of the pipe.
 - b. Fittings shall conform to ASTM A-403-WP in accordance with B16.9.
 - c. Longitudinal seams on pipe and fittings shall be welded by the GTAW, PAW, FCAW, SAW, or the SMAW methods. Filler metal, if utilized, shall be of same composition or superior to the pipe and fittings material.
 - d. Weld deposit at the seams shall have a slight crown on both sides of the weld and no cracks or crevices shall be allowed. Excessive weld deposits, slag, weld spatter and projections into interior of pipe shall be removed by grinding. The interior welds shall be smooth, even and shall not have an internal bead higher than 1/16 inch.

- e. All pieces shall be marked indicating wall thickness/schedule, grade of stainless steel, and ASTM Standard.
 - f. All pieces shall be marked indicating wall thickness/schedule, grade of stainless steel, and ASTM Standard. Roll or Cut grooved as appropriate to the pipe material, wall thickness, pressure, size and method of joining.
 - g. For pipe sizes 2" and smaller, ASTM A312, Schedule 10S, stainless steel pipe with plain ends may be used in applicable piping systems with Vic-Press couplings and fittings.
 - h. Schedule 5S and 10S stainless steel pipe shall be roll grooved using a Victaulic grooving tool equipped with RX roll sets, specifically designed for stainless steel pipe.
2. Fittings
- a. Fittings shall be butt weld type per ASTM-A-403WP and manufactured in accordance with ANSI B16.9. All fittings shall be of the same pressure rating and grade material as the pipe.
 - b. Fittings three inches and smaller shall be threaded conforming to ASTM-A-182 forged, Class 3000# and manufactured to ANSI B16.11.
 - c. Fittings for buried or submerged pipe larger than three inches shall be butt-welded, conforming to ASTM-A-403WP, same pressure rating and material as the pipe and manufactured to ANSI B16.9.
 - d. Fittings for above ground or exposed pipe larger than three inches shall be butt-welded or flanged, conforming to ASTM A 403 WP.
 - e. Grooved End Fittings:
 - 1) Fittings shall be manufactured of stainless steel conforming to ASTM A-403, WPW, WPW/S9, or CR/S9, or shall be fabricated from stainless steel pipe conforming to ASTM A312, with factory grooved ends. Fittings shall be type 316.
 - 2) For NPS 2-inch and smaller, Schedule 10S stainless steel pipe may be used with precision, cold drawn, austenitic stainless steel fittings, complete with elastomer O-ring seals and suitable for working pressure of 500 psig. Basis of Design: Victaulic Vic-Press for Schedule 10S pipe.
3. Joints
- a. Joints for pipes three inches and smaller shall be threaded, grooved or socket welded, same material as the pipe, 3,000 pound WOG, conforming to ANSI B16.11.
 - b. Joints for buried or submerged pipe larger than three inches shall be butt-welded.
 - c. Joints for aboveground or exposed pipe larger than three inches shall be grooved or butt-welded except where flanges or grooved end joints are shown on the Drawings.
 - d. Grooved
 - 1) Couplings shall consist of two ASTM A536 ductile iron housings or ASTM A351, Grade CF8M, stainless steel housings.
 - 2) Rigid Type: Housing key shall engage the bottom of the groove. Victaulic Style 89 (DI) and Style 489 (SS).
 - a) AGS series two-segment couplings with lead-in chamfer on housing key and wide-width FlushSeal gasket. Victaulic Style W89.
 - 3) Flexible: Victaulic Style 77S.
 - e. Split Sleeve Couplings
 - 1) Couplings shall consist of a double-arched rolled stainless steel housing, with closure plates and two elastomer O-ring seals. Couplings shall be Victaulic Style 230S Non-Restrained (Depend-O-Lok ExE); 231S

Expansion (Depend-O-Lok FxE); and Style 232S Restrained (Depend-O-Lock FxF).

4. Flanges
 - a. Provide weld-neck flanges conforming to ANSI B16.5 for piping three inches and smaller to connect to flanged valves, fittings, or equipment. Provide slip-on flanges for piping larger than three inches. Provide blind flanges at dead end connections and where shown on the Drawings.
 - b. Flanges shall be Class 150 per ANSI B16.5
 - c. Provide full-face gaskets for flat faced flanges. Provide ring gaskets for raised face flanges. Gaskets shall be composed of asbestos with rubber binder, 1/8-inch thick, Johns-Manville No. 60, John Crane Co. "Granite", or equal for high temperature air service and shall be constructed of EPDM for ambient temperature water service.

2.4 CHEMICAL FEED TUBING

- A. Braid Reinforced PVC Tubing
 1. Chemically resistant, flexible, high-dimensional stability and long-term strength.
 2. Working Pressure: 100 psi min. at 70 degree F
 3. Fittings: Barbed type, made of polypropylene, fastened with 316 SST hose clamps.
 4. Support: Tubing to be supported by schedule 80 PVC carrier piping. See details on the drawings. Carrier piping to be supported hardware and in accordance with Division 40, Section "Pipe Supports".
 5. Manufacturer
 - a. Tubing: New Age Industries Nylobrade or Engineer Approved Equal.
 - b. Fittings: New Age Industries Thermobarb or Engineer Approved Equal.
 6. Spare Tubing:
 - a. For each size diameter tubing provided, Contractor shall provide 1,000 LF of spare tubing.

2.5 PROCESS PIPE INSULATION

- A. Process piping insulation is required at the following locations:
 1. All above grade exterior process piping.
- B. Pipe Insulation, Non-flexible:
 1. Techlite 379 Series with PVC film jacket.
 2. Thermal conductivity (K value): Not greater than 0.23 at mean temperature of 75 deg F.
 3. Apply to the following piping in thickness indicated:
 - a. Process piping (40 – 60 deg F):
 - 1) 1-1/4 inch and smaller 1/2 inch
 - 2) 1-1/2 inch and larger 1 inch
 - b. Process piping (below 40 deg F):
 - 1) 3/4 inch and smaller 1/2 inch
 - 2) 1 inch to 6 inch 1 inch
 - 3) 8 inch and larger 1-1/2 inch

2.6 PROCESS PIPE HEAT TRACING

- A. Process piping shall be heat traced where indicated on the drawings. Heat tracing shall be in accordance with Division 40, Section "Process Piping Heat Tracing".

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. General

1. Piping shall be installed in a manner to permit easy removal of valves and disconnection of equipment. Unions or flanged joints shall be installed for this purpose.
2. Piping shall be installed, supported, guided, and anchored to properly provide for movement due to expansion and contraction without undue strains on the joints and in such a manner that it will not sag, buckle or sway.
3. Piping shall not be supported from other pipes, conduits, ducts or similar installations.
4. No piping shall be supported by the equipment to which it is connected. Install base elbows, hangers or other approved independent method of support for the pipe.
5. Connections to equipment shall be arranged to facilitate ease of removal and service without dismantling of the runouts of main piping, and shall be installed by the use of multiple elbows or other similar methods to minimize strain on the equipment connections.
6. No field-fabricated welding fittings shall be permitted. All welding tees, elbows, reducers, and caps shall be commercially manufactured products.
7. All open ends of pipes, including equipment connections, shall be properly sealed at all times during installation to keep dirt and all foreign material out of the piping. Plugs used shall be commercially manufactured products.
8. Pipe size reductions shall be made with factory-fabricated eccentric reducers, concentric reducers, or reducing fittings and shall be installed not to cause pocketing or inhibit the flow of the material.
9. Install shut-off valves or cocks with unions on all connections to equipment and on each side of traps and control valves as required for ease of proper servicing and maintenance.
10. Unless otherwise indicated, the discharge from pressure-and temperature-relief valves and equipment drains shall be piped to the nearest floor or hub drain, installed with an approved air gap as required, and arranged for safe discharge.
11. No pipe shall penetrate any structural member without the written approval of the Engineer. Where such penetration is allowed, the structural member shall be reinforced subject to the approval of the Engineer.
12. Flanges and Gaskets
 - a. Where forged steel flanges are to be bolted to cast iron flanges, a smooth or flat-face forged steel flange with a full-face gasket shall be used.
 - b. All gaskets, other than teflon envelope or full-face, shall be of the flat ring type, with the outside diameter of the gasket extending to the edge of the bolts.
 - c. Gaskets for all joints shall have an inside diameter equal to the outside diameter of the pipes on which they are to be used to ensure that no portion of the gasket will project into the ports of valves, pipe, or fittings.
 - d. The dimensions of all gaskets shall conform to ANSI Standard B-16.21 for nonmetallic gaskets.
13. Provide flanged coupling adapters as necessary to accommodate ease of piping installation according to Contractor's layout plan.
14. Installation shall include all rough-in and final connections to equipment and services as provided in the Contract Documents, for the services and equipment to be functional.

- B. Cross Connections and Interconnections: No devices, equipment or pipe connections shall be installed that will provide a cross-connection or interconnection between a potable water supply

and any source of nonpotable water such as a drainage system, a soil pipe, a waste pipe, or where the water may be chemically treated.

3.2 PIPE EXPANSION CONTROL: INSTALLATION

A. General

1. Install expansion loops or joints as required, to limit strain and movement of the piping.
2. All loops shall be cold sprung when installed.
3. Install conforming manufactured guides for each loop and joint to maintain the proper pipe alignment and minimize undue stresses on the piping and joints.
4. All mechanical joints and guides shall be installed in accordance with the Manufacturer's recommendations.
5. Install conforming manufactured pipe anchors at the midpoint between loops and joints. Installation and design shall be subject to the approval of the Engineer or Owner.
6. Manufacturer shall be held responsible for the proper capacity of the joints, with a minimum 25% allowance beyond the anticipated expansion and contraction in the piping.

- B. Polyvinyl Chloride (PVC) Pipe: Provide expansion joints in straight piping runs over 50 feet and at least every 50 feet. Shall be Proco Series 261 or equal based on Chemical compatibility.

3.3 EXPOSED PIPING: INSTALLATION

A. General

1. Do not obstruct passageways, headroom, door and window operation, and similar areas with the installation of the piping and supports.
2. Painting of piping is specified elsewhere in the Contract Documents.
3. Install straight runs true to line and elevation.
4. Install vertical pipe plumb in all directions.
5. Install piping parallel or perpendicular to building walls. Piping at angles and 45 deg runs across corners shall not be accepted unless specifically shown.

B. Joints

1. General

- a. Make joints in accordance with the pipe Manufacturer's recommendations and the requirements below.
- b. Cut piping accurate and square. Assemble without forcing or springing.
- c. Ream all pipes and tubing to full inside diameter after cutting. Remove sharp edges on end cuts.
- d. Remove all cuttings and foreign matter from the inside of pipes and tubing before installation.
- e. Thoroughly clean all pipe, fittings, valves, specials, and accessories before installing.
- f. Thoroughly wire-brush, wipe clean and dry all spigot mating surfaces immediately before pipe is installed.

2. Threaded Joints

- a. Use standard righthand tapered full depth threads on steel piping.
- b. Apply before installation an approved joint compound to the male threads only.
- c. Leave three pipe threads maximum exposed at each connection.

3. Grooved Joints:

- a. Install in accordance with the manufacturer's latest published installation instructions. Pipe ends shall be clean and free from indentations, projections and

roll marks in the area from pipe end to (and including) groove. Gasket shall be manufactured by the coupling manufacturer and verified as suitable for the intended service. A factory trained representative (direct employee) of the coupling manufacturer shall provide on-site training for Contractor's field personnel in the use of grooving tools, application of groove, and product installation. The representative shall periodically visit the job site and review installation to ensure best practices are being followed. Contractor shall correct any deficiencies found.

4. Solder Joints
 - a. Ream or file pipe to remove burrs.
 - b. Clean and polish contact surfaces of joints
 - c. Apply flux to both male and female ends.
 - d. Insert end of tube full depth into fitting socket.
 - e. Heat joint evenly.
 - f. Form continuous solder bead around entire joint circumference.
 5. Flanged Joints: Use hexagon head nuts and bolts. Assemble flanged joints with gaskets and gasket compounds in compliance with the applicable material specifications. Tighten flange bolts evenly.
 6. Plastic Pipe Joints: Comply with Manufacturer's recommendations.
- C. Unions
1. Install dielectric unions where dissimilar metals are connected except at bronze or brass valves installed in ferrous piping.
 2. Provide a union downstream of each screwed end valve.
 3. Provide screwed or flanged unions at each piece of equipment, where shown, and where necessary to install or dismantle piping.
- D. Eccentric Reducers: Use eccentric reducers where shown and where air or water pockets would occur in mains because of reduction in pipe size.
- E. Transitions between Types of Pipe: Provide all necessary adapters, specials and connector pieces when connecting different types and sizes of pipe or connecting pipe furnished by different Manufacturers.
- F. Restraints, Supports and Thrust Blocks
1. Install restrained joints as shown, specified, recommended by Manufacturer, or otherwise required.
 2. Provide concrete and metal cradles, collars, kickers, and blocks as indicated.
- G. Expansion Coupling
1. Install expansion couplings in tension to facilitate their removal.
 2. Set stretcher bolts for maximum allowable elongation of expansion coupling as recommended by the Manufacturer.
- H. Adjustment: Adjust all parts and components as required to provide correct operation.
- I. Hangers, Supports and Attachments: Installation: Refer to Division 40 Section "Pipe Supports".
- J. Identification of Piping: Paint, identify contents of piping and flow direction, and coordinate color coding of both insulated and non-insulated piping with Division 09 Section "High Performance Coatings".

3.4 BURIED PIPING: INSTALLATION

- A. Conform to the applicable requirements set forth in Division 33 Section “Buried Piping Installation”.

3.5 PVC AND CPVC PIPE INSTALLATION

A. General

- 1. Do not install pipe when the temperature is below 40 deg F or above 90 deg F. Store loose pipes on racks with a minimum support spacing of 3 feet. Provide shade from direct sunlight for pipe stored outdoors or installed outdoors until the pipe is filled with water.
- 2. Store fittings indoors in their original cartons.
- 3. Store solvent cement indoors or, if outdoors, shade from direct sunlight. Do not use solvent cements which have exceeded the shelf life marked on the storage container.
- 4. Before installation, check pipe and fittings for cuts, scratches, gouges, buckling, kinking, or splitting on pipe ends. Remove any pipe section containing defects by cutting out the damaged section as a complete cylinder.

B. Installation

- 1. Do not drag PVC pipe over the ground, drop it onto the ground, or drop objects on it.
- 2. Cut pipe ends square and remove all burrs, chips, and filings before joining pipe or fittings.
- 3. Bevel solvent welded pipe ends as recommended by the pipe manufacturer.

C. Solvent Welded Joints

- 1. Prior to solvent welding, remove fittings and couplings from their cartons and expose them to the air for at least one hour to the same temperature conditions as the pipe.
- 2. Wipe away loose dirt and moisture from the ID and OD of the pipe end and the ID of the fittings before applying solvent cement. Do not apply solvent cement to wet surfaces.
- 3. Make up solvent welded joints per ASTM D 2855.
- 4. Allow at least eight hours of drying time before moving solvent welded joints or subjecting the joints to any internal or external loads or pressures.

D. Flanged Joints

- 1. Lubricate stainless steel bolt threads with specified materials before installation.
- 2. Tighten bolts on flanges by tightening the nuts diametrically opposite each other using a torque wrench. Complete tightening shall be accomplished in stages and the final torque values shall be as shown in the following table:

Pipe Size (inches)	Final Torque (Ft-Lb)
1/2 – 1-1/2	10-15
2-4	20-30
6-8	33-50
10	53-75
12	80-110
14-24	100

- E. Threaded Joints
 1. Cut threaded ends on pipe to the dimensions of ANSI B2.1. Ends shall be square cut. Follow the pipe manufacturer's recommendations regarding pipe holddown methods, saw cutting blade size, and saw cutting speed.
 2. Pipe or tubing cutters shall be specifically designed for use on plastic pipe.
 3. If the holddown vise is used when pipe is cut, insert a rubber sheet between the vise jaws and the pipe to protect from scratching the pipe.
 4. Thread cutting dies shall be clean and sharp and shall not be used to cut materials other than plastic.
 5. Not more than three threads shall remain exposed after installation.
 6. All joints shall be wrapped with Teflon tape.

3.6 SLEEVES: INSTALLATION

- A. Provide and accurately locate all sleeves required under this Section. Set sleeves true to line, grade and position, plumb or level, and maintain as such during the work under other Divisions.
- B. Sufficient advance notice shall be supplied to the proper trade to enable the installation to progress.
- C. Whenever improper location or insufficient notice is provided for the installation of the sleeves, such work shall be done as Work of this Section, with no change in the Contract Sum or the Date of Substantial Completion.
- D. Sleeves shall not penetrate any structural member except as shown on the Drawings.
- E. Provide 8-inch clear space between sleeves unless otherwise indicated on the Drawings.
- F. Sleeves shall be of the full thickness, with the exposed ends flush and smooth, with the structure in which they are installed.
- G. Wherever water might get into the sleeve, the sleeves shall extend 1 inch above the finished surface and be made watertight. The exposed end shall be smooth and neatly finished.
- H. On all piping passing through a sleeve, the piping insulation shall be continuous through the sleeve. The sleeve shall be sized to allow a 1 inch annular space between the sleeve and the bare pipe or insulation.
- I. Sealing of Sleeves and Penetrations
 1. Where sleeves are embedded through cast-in-place concrete walls or slabs on or below grade, the joints between the concrete and the sleeve shall be sealed with a polyurethane sealer.
 2. Where sleeves pass through boxed out or cored openings in concrete walls or floor slabs on or below grade, a bonding agent shall be applied to the concrete surface and a nonshrink grout shall be installed between the concrete and the sleeves. After the grout has cured, the joints between the grout and the sleeves on both sides of the wall or floor shall be sealed with a polyurethane sealer.
 3. Where sleeves pass through exterior building walls above grade, the joints between the wall and sleeve on both sides of the wall shall be sealed with silicone sealer or the opening shall be sealed with silicone foam.

- J. The 1 inch annular space around pipes passing through sleeves shall be filled with silicone foam having a minimum service temperature rating at least 15 deg F higher (8.3 deg C higher) than the temperature of the pipe service passing through it.

3.7 TESTING

A. General

1. All pipe lines shall be tested to prove tightness of the final assembly. The Engineer shall be given 24 hours notice before each test.
2. All tests required by governing authorities shall be satisfactorily made.
3. Provide all necessary testing apparatus, including gages, pumps, hoses, and fittings.
4. Repair and retest pipelines which fail to hold specified test pressure or which exceed the allowable leakage rate.
5. Test pressures specified apply at the lowest elevation of the pipeline section being tested unless otherwise noted.
6. The Contractor is responsible for all testing and shall pay all costs incurred during the specified testing.

B. Hydrostatic Pressure Testing

1. General
 - a. Conduct hydrostatic pressure testing on all process piping in accordance with AWWA C600.
 - b. Slowly fill section to be tested with water and expel all air. Install corporation cocks as necessary to remove air.
 - c. Apply test pressure for two hours.
2. Exposed Piping
 - a. Allow any concrete which may be affected by the testing to reach design strength before testing.
 - b. Ensure that all supports and restraint protection are securely in place.
3. Buried Piping
 - a. Place and compact backfill to at least the pipe centerline before testing, unless otherwise required or acceptable to the Engineer. Backfill and compact around all blocking before testing and as required to assure restraint by harnessed joints.
 - b. Allow concrete for blocking to reach design strength before testing.
4. Test Pressure
 - a. Piping connected to pump suction and discharge: 150% of specified maximum operating head of pump.
 - b. Gravity flow ductile iron pipe: 150% of maximum static water head of pipe section being tested.
 - c. Liquid chemical feed piping: 100 psi

C. Allowable Leakage: Leakage shall not exceed:

$$L = \frac{SD(P)^{0.5}}{133,200}$$

Where

L = Allowable leakage, gallons per hour.

S = Length of pipe tested, feet.

D = Nominal diameter of pipe, inches.

P = Average test pressure, psig.

3.8 CLEANING AND DISINFECTION

A. General

1. All piping systems shall be cleaned and flushed out prior to operation. If it is necessary to place the system in operation by sections, then the cleaning shall be done by sections. Notify Owner prior to start of Work.
2. Inspect inside of piping 24-inch diameter and larger and remove all debris, dirt and foreign matter.
3. All piping, including equipment installed in connection with the piping, conveying liquids shall be filled and flushed several times to eliminate all debris and contaminants.
4. Where pumps are installed, install temporary strainers ahead of pumps and circulate the medium through several cycles. The system shall be flushed out and the temporary strainers removed. Strainers shall have a free area of at least 3 times the cross sectional area of the attached pipe.
5. Prior to turning over the Work, this Contractor shall remove and clean all strainers, traps, and dirt pockets.
6. All process piping shall be pigged and flushed.

B. Disinfection

1. Standard: AWWA C651 unless otherwise acceptable to the Engineer or Owner.
2. Disinfect all potable water piping.
3. Flush piping with water at 2-1/2 feet per second minimum velocity prior to disinfection.
4. Water for flushing, testing and chlorination will be furnished by Owner at no cost to Contractor.
5. Chlorine shall be supplied by Contractor.
6. All other labor, material and equipment including chlorination taps and blow-off taps shall be furnished and paid for by the Contractor.
7. Chlorine Concentration
 - a. Maintain chlorine concentration between 50 and 100 parts per million for water entering the pipe.
 - b. 25 parts per million minimum residual concentration shall remain after 24 hr retention period.
 - c. Repeat the operation as necessary to provide complete disinfection.
 - d. Provide two safe total coliform samples taken 24 hours apart prior to placing pipe in service. Provide results to Ohio EPA and the Engineer.

3.9 INSULATION INSTALLATION

- A. Do not insulate piping until satisfactory completion of required pressure tests.
- B. Apply insulation to clean, dry surfaces with pipe surfaces at room temperature.
- C. Butt insulation firmly together with longitudinal and end joints sealed with compatible jackets, facings and adhesives as specified.
- D. Apply adhesives, mastics and coatings per manufacturer's recommendations and as specified.
- E. On cold surfaces where vapor barrier jackets are used, apply insulation with a continuous, unbroken vapor seal.
 1. Adequately insulate and vapor seal hangers, supports, and anchors that are secured directly to cold surfaces to prevent condensation.

- F. Continue insulation through sleeves and wall and ceiling openings except insulation shall not continue through fire-rated (2-hour or greater) partitions, walls, floor-ceiling systems.
- G. Insulate all fittings, valve bodies, flanges and other pipeline accessories.
- H. At hangers and bracing, install in accord with Division 40 Section "Pipe Supports".
- I. Contractors shall consult manufacturer's Technical Bulletins for detailed information on safety precautions in using all insulation products, polyurethanes, polyisocyanurates, and related materials. The data shall describe fire and other risks, safety in handling, toxicity, threshold limit values, physiological effects of inhalation and eye and skin contact, incompatibilities and other essential information regarding use. Obtain 6 copies for distribution and use at jobsite and for submittal with shop drawing submittals.
- J. On piping, install with lap joint attached using outward clinching staples, 3-inch centers, 1/4 inch from edge on hot piping.
 - 1. On cold piping, use self-sealing lap system or adhesive applied to both surfaces per manufacturer's recommendation.
 - 2. Do not staple cold piping.
 - 3. Butt adjoining sections of insulation tightly together and continue jacket by installing self-adhering butt strips over entire circumferential joint.
- K. Installation of Insulation of Fittings
 - 1. For pipe sizes 2 inches and smaller, finish with mineral fiber cement to thickness of adjoining pipe insulation.
 - 2. Over 2 inches, insulate with mitered pipe insulation segments or preformed fiberglass fittings secured with vinyl faced insulation strapping tape or 20 ga galvanized annealed wire and finished with one coat of mineral fiber cement.
 - 3. After cement is dry, finish with Glass Fab and seal with Foster 30-36 adhesive.
 - 4. Prefabricated fitting covers approved for use at pipe fittings may be used instead of finishing method outlined above.
 - 5. Install in accordance with manufacturer's recommendations.
- L. Cover all insulated piping exposed to weather with additional jacket of 0.016-inch smooth aluminum with moisture barrier.
 - 1. Apply aluminum jacket with 0.020-inch x 3/8-inch aluminum bands on 9-inch centers, minimum 2-inch lap joint.
 - 2. Protect fittings, valves, and specialties exposed to weather in like manner.
 - 3. Contractor option: Use Ceel-Co 300 Series plastic jacketing applied per manufacturer's recommendations.
- M. Reinforce jackets on insulated piping in mechanical rooms and central plant less than 8 ft. above floor.
 - 1. Cover with 0.030 inch PVC jacket conforming to 25-50 fire requirements.

END OF SECTION 40 0513

SECTION 40 0523

PROCESS VALVES, GATES, AND ACCESSORIES

PART 1 - GENERAL

1.1 REFERENCE

- A. All applicable requirements of other portions of the Contract Documents apply to the Work of this Section, including, but not limited to Division 01 General Requirements.

1.2 DESCRIPTION OF WORK

- A. Valves, Gates, Actuators and Accessory Process Equipment

1.3 RELATED WORK SPECIFIED ELSEWHERE

- A. Valves and accessories for a specific system, as covered in other sections. Valves not included in other Sections shall conform to this Section.
- B. Valves associated with plumbing, interior potable water systems and heating normally installed by a mechanical contractor.
- C. Division 09 Sections.
- D. Division 26 - Electrical.

1.4 QUALITY ASSURANCE

- A. The equipment manufacturer shall have been engaged in the manufacture of the equipment being supplied for the past 5 years.
- B. All equipment shall be rated for the specified test pressure of the piping where it is connected. Refer to Division 40 Section "Process Piping", for test pressures.
- C. Manufacturer's Representative
 - 1. A manufacturer-trained and certified representative shall check the installation, supervise the initial start-up and operation, and instruct the Owner's personnel in the proper operation and maintenance for the valves listed below.
 - a. Pneumatic pinch valves.
 - b. Electrically activated butterfly valves.
 - 2. The manufacturer's representative shall spend a minimum of 8 hours on site performing these services.
 - 3. Return visits shall be made as required to accommodate the construction schedule until each valve is started and demonstrated to be operating properly. Return visits shall be at no expense to the Owner.

1.5 SUBMITTALS

- A. Provide technical submittals in accordance with Division 01 Section “Submittal Procedures”, demonstrating that all equipment provided conforms completely to the requirements of this Section.
- B. Product Data
 - 1. Catalog cut sheets and description of all items.
 - 2. Specific location of each item in the Project identified with Engineer's valve schedule number.
 - 3. Construction materials.
 - 4. Electric and control data.
- C. Shop Drawings
 - 1. Detailed dimensional drawings indicating overall dimensions and required clearances of each size item with actuators mounted.
 - 2. Orientation of actuator.
 - 3. Elevations, weights and sizes of all gates.
 - 4. Cross-section drawings labeling all interior parts, including bearings, seals, and other mechanical parts.
 - 5. Diagrams indicating lubrication compartments and anchoring and mounting details.
- D. Operation and Maintenance Manuals: Provide Operation and Maintenance Manuals in accordance with Division 01 Section “Closeout Procedures”.

1.6 HANDLING, DELIVERY AND STORAGE

- A. Handling and storage instructions shall accompany each pump delivered to the site. Store all equipment in accordance with the manufacturer's instructions.
- B. Power actuators shall be stored indoors, protected from precipitation.

1.7 REFERENCED STANDARDS

- A. American Society of Mechanical Engineers (ASME); American Society of Testing and Materials (ASTM); American Water Works Association (AWWA).

PART 2 - PRODUCTS

2.1 AMERICAN IRON AND STEEL REQUIREMENTS

- A. This project is being funded in part with loan and loan forgiveness funds from the Ohio EPA WSRLA Program and is subject to American Iron and Steel (AIS) requirements. See Division 00, Section “OEPA WSRLA Program Requirements.”
- B. Attempts made by suppliers and/or manufacturer’s to intentionally avoid having to comply with the AIS requirements by changing the material of valve components from those specified (or other similar measures) will result in the submittal being returned with the disposition of Does Not Conform.

2.2 GENERAL

- A. Valve schedule is shown on the drawings.

- B. Connections: As shown on the Drawings, grooved joints are acceptable at locations where flanged joints are shown on the drawings. If not designated, use flanged or grooved joints for exposed valves and mechanical joints for buried valves.
1. Flanged: ANSI B16.1, Class 125
 2. Mechanical joint: ANSI 21.11
 3. Grooved: ANSI/AWWA C-606
- C. Bolts and Studs
1. Exposed (painted): Zinc Plated.
 2. Exposed (unpainted): 304 SST.
 3. Buried: 316 SST or Cor-Blu.
 4. Submerged: 316 SST.
 5. Head: Hexagon for flanged, T-head for mechanical joint.
 6. Provide a washer under each nut and under each bolthead. Washers shall be of the same material as the bolts.
 7. Lubricant shall be TRX-Synlube by Ramco, Anti-Seize by Ramco, Husk-It Husky Lube O'Seal, or equal.
- D. Labeling
1. Manufacturer's name and working pressure cast in raised letters on valve body.
 2. Valve Tags: Provide 316 SST valve tags on each valve after valve is installed, with the following information clearly labeled:
 - a. Valve number
 - b. Direction to open
 - c. Number of turns to open
 - d. Pressure rating
 - e. Function

2.3 VALVES

- A. Butterfly Valve (BFV-AWWA)
1. Description:
 - a. AWWA C-504 type butterfly valve.
 2. Manufacturer/Model:
 - a. Dezurik/BAW.
 - b. Crispin.
 - c. Pratt.
 - d. Val-Matic.
 3. End Connection:
 - a. Flanged, ANSI Class 150.
 4. Materials of Construction:
 - a. Body:
 - 1) Cast Iron, ASTM A126 Class B
 - b. Discs
 - 1) Cast 316 SST, ASTM A749, Type CF8M
 - c. Shaft, Seating Edge, and Pin:
 - 1) 316 SST, ASTM A276
 - d. Packing and Seat:
 - 1) EPDM.
 - e. Torque Screw:
 - 1) 316 SST, ASTM A276

- f. Set Screws:
 - 1) 18-8 SST.
- g. Plug:
 - 1) Malleable Iron, ASTM A47-52 Grade 35018
- h. Lower Journal Bearing:
 - 1) PTFE
- 5. Valve Orientation
 - a. Any butterfly valve located immediately downstream of the discharge of any centrifugal pump with a vertical drive shaft shall have its shaft in a horizontal position.
 - b. Any butterfly valve located immediately downstream of the discharge of any vertical lift type pump should have its shaft in a vertical position.
 - c. Any butterfly valve which is located immediately downstream of any elbow should have its shaft located in the same plane as the elbow.
 - d. The valve disc should be installed with the shaft axis oriented so nonsymmetric profiles caused by pump discharge, elbows, or other causes of irregular flow do not impinge upon the valve disc in a nonsymmetrical manner about the valve shaft axis.

B. Butterfly Valve (BFV-SST)

- 1. Description:
 - a. Double offset stem and disc, high performance butterfly valve with zero leakage bi-directional shutoff to full rated pressure.
- 2. Manufacturer/Model:
 - a. Bray/Series 40.
 - b. Dezurik/BHP.
 - c. Engineer Approved Equal.
- 3. End Connection:
 - a. Wafer or Lug, ANSI Class 150
- 4. Pressure Rating:
 - a. 275 psig at Temperatures up to 100 degrees F
- 5. Materials of Construction:
 - a. Body and Disc:
 - 1) Cast 316 SST, ASTM A351 GR CF8M
 - b. Stem and Taper Pins:
 - 1) 17-4 PH SST, ASTM A564-Type 630
 - c. Disc Spacers, Bearing Assembly, Gland Ring, and Stud:
 - 1) 316 SST, ASTM 276 with TFE and glass fabric bearing assembly liner
 - d. Gland Retainer and Seat Retainer Plate:
 - 1) Cast 316 SST, ASTM A351 GR CF8M
 - e. Lock Washers, Hex Nut, Cap Screws, and Mounting Plate:
 - 1) 18-8 SST
 - f. Gasket (between bearing assembly and locator plug):
 - 1) PTFE

C. Butterfly Valve (BFV-Coated)

- 1. Description:
 - a. Resilient seat, high strength, one piece butterfly valve with coated disc and bi-directional bubble-tight shutoff.
- 2. Manufacturer/Model:
 - a. Bray/Series 30.

- b. Dezurik
- c. Engineer Approved Equal.
- 3. End Connection:
 - a. Wafer or Lug, ANSI Class 150
- 4. Pressure Rating:
 - a. 175 psig at Temperatures up to 100 degrees F
- 5. Materials of Construction:
 - a. Body:
 - 1) Cast Iron, ASTM A126 Class B with Nylon 11 Coating
 - b. Seat:
 - 1) EPDM
 - c. Stem:
 - 1) 416 SST, ASTM A582
 - d. Disc:
 - 1) Nylon 11 Coated Ductile Iron

D. Swing Check Valve (CV-Cast Iron)

- 1. Description:
 - a. AWWA C-508 type check valve.
- 2. General:
 - a. The valve shall be tight seating when closed, and when open provide full flow area through the valve equal to the pipeline diameter.
 - b. The seating shall be by a resilient field replaceable ring on the valve disc contacting a stainless seat ring in the valve body.
 - c. Valve shall be capable of being installed in the vertical.
 - d. Valve shall include an air cushion closure control device.
- 3. Manufacturer/Model:
 - a. APCO/CVS.
 - b. Bray.
 - c. Pratt.
- 4. End Connection:
 - a. Flanged, ANSI Class 150.
- 5. Materials of Construction:
 - a. Body, cover, disc, and disc arm:
 - 1) Ductile Iron ASTM A536 or Cast Iron A126 C1B.
 - b. Body Seat:
 - 1) 316 SST with EPDM retaining ring.
 - c. Seat retaining ring:
 - 1) 304 SST.
 - d. Disc Seat:
 - 1) EPDM.
 - e. Pivot Shaft:
 - 1) Type 303 SST, ASTM 582.
 - f. Studs, bolts, nuts:
 - 1) 304 or 316 SST.

E. Check Valve (CV-SST)

- 1. Description:
- 2. Manufacturer/Model:
 - a. Bray(Rite)/210.
 - b. Prince.

- c. Engineer Approved Equal.
- 3. End Connection:
 - a. Wafer or Lug, ANSI Class 150
- 4. Materials of Construction:
 - a. Body:
 - 1) Cast 316 SST, ASTM A351 GR CF78M
 - b. Seat:
 - 1) EPDM
 - c. Spacers:
 - 1) 316 SST, ASTM A479

F. Globe Valve (GLOBE-Conc.)

- 1. Manufacturer:
 - a. Warren Controls, 5840 Series.
- 2. Function:
 - a. Flow Control.
- 3. End Connection:
 - a. Flanged, ANSI Class 300.
- 4. Materials of Construction:
 - a. Body and Bonnet:
 - 1) Cast 316 SST (ASTM A351 GR CF8M)
 - b. Stem, cage, plug, trim, and seat ring:
 - 1) 316 SST
 - c. Lip:
 - 1) EPDM with PEEK bearings
- 5. Enclosure Blanket:
 - a. Provide an insulating blanket wrap for the valve
- 6. Actuator:
 - a. Type:
 - 1) Modulating, linear, industrial electrically actuated.
 - b. Fail in place.
 - c. Power Supply:
 - 1) 24 VAC/DC.
 - d. Control Signal and Feedback:
 - 1) 4-20 mA.
 - e. Cover:
 - 1) Polycarbonate
 - f. Gear case material:
 - 1) Aluminum die casting, powder-coated (60 micron thickness)
 - g. Enclosure Rating:
 - 1) IP65

G. Globe Valve (GLOBE-Bypass)

- 1. Description: Motor operated flow control valve.
- 2. Manufacturer/Model:
 - a. Ross Valve
 - b. Cla-Valve
 - c. GA Industries
- 3. End Connection:
 - a. Flanged, ANSI Class 150.
- 4. Pressure Rating: 250 psi.

5. Materials of Construction:
 - a. Body and cover:
 - 1) Ductile Iron, ASTM A536.
 - b. Disc Retainer & Diaphragm Washer:
 - 1) Cast Iron
 - c. Disc Guide, Seat, and Cover Bearing:
 - 1) Bronze, ASTM B62.
 - d. Disc and Diaphragm:
 - 1) Buna-A (with nylon reinforcement in the diaphragm).
 - e. Stem, Nut, and Spring:
 - 1) 304 SST.
 6. Controls
 - a. Provide a modulating motorized operator for control of the valve via a 4-20 mA signal.
- H. V-notch Ball Valve (BA-V-Notch)
1. Manufacturer/Model
 - a. Bray(Flow-tek)/V-Control
 - b. Dezurik.
 2. End Connection:
 - a. Flanged, ANSI Class 150.
 3. Materials of Construction:
 - a. Body, Ball, and Stem:
 - 1) 316 Stainless Steel.
 - b. Seals and Seats:
 - 1) Tek-Fil.
 4. Actuator: As specified in the valve schedule.
- I. Ball Valve (BA-SST)
1. Description:
 - a. One piece body, quarter turn, bottom entry blowout proof stem, SST ball valve.
 2. Manufacturer/Model:
 - a. Bray(Flow-Tek)/S40
 - b. Engineer Approved Equal
 3. End Connection:
 - a. NPT Threaded
 4. Pressure Rating:
 - a. 1,000 psi WOG
 5. Materials of Construction:
 - a. Body and Body Insert:
 - 1) Cast 316 SST, ASTM A351 GR CF8M
 - b. Ball and Stem:
 - 1) 316 SST, ASTM A479
 - c. Seat, Thrust Washer, Stem Packing
 - 1) RPTFE
 - d. Spring Washer:
 - 1) 301 SST
 - e. Handle, Handle Nut, Locking Device, and Gland
 - 1) 304 SST
 - f. Handle Sleeve
 - 1) Vinyl

- J. Check Valve (CV-Thermoplastic)
1. Description: Solid, thermoplastic construction type wafer check valve incorporating a single disc design suitable for either horizontal or vertical installations.
 2. Manufacturer/Model
 - a. Asahi/Wafer Check Valve.
 - b. Engineer Approved Equal.
 3. End Connection:
 - a. Wafer, ANSI Class 150.
 4. Pressure Rating:
 - a. 150 psig (85 psi for valves larger than 8")
 5. Materials of Construction:
 - a. Body, Disc, Stopper, Shaft, Shaft Plug, and AV Bolt:
 - 1) H707 PVC, ASTM D1784 1245
 - b. I-bolt:
 - 1) SS400.
 - c. Spring:
 - 1) SWP-B W/ETFE Coating.
 - d. O-ring:
 - 1) EPDM
- K. Butterfly Valve (BFV-Thermoplastic)
1. Description: Thermoplastic construction type butterfly valve with full seat liner design fully molded around the body.
 2. Manufacturer/Model
 - a. Asahi/Type 57P.
 - b. Engineer Approved Equal.
 3. End Connection:
 - a. Wafer, ANSI Class 150.
 4. Pressure Rating:
 - a. 150 psig (100 psi for valves larger than 10")
 5. Materials of Construction:
 - a. Body, Disc, Seat Bush:
 - 1) H707 PVC, ASTM D1784 1245A
 - b. Seat, O-ring, and Gasket:
 - 1) EPDM.
 - c. Stem:
 - 1) 316 SST.
 - d. Screw and Bolt:
 - 1) 304 SST.
- L. Ball Valve (BA-Thermoplastic)
1. Description: Thermoplastic construction type, true union ball valve with two-way blocking capability.
 2. Manufacturer/Model
 - a. Asahi/Type 21/21A.
 - b. No Approved Equals.
 3. End Connection:
 - a. True Union.
 4. Pressure Rating:
 - a. 230 psig (150 psi for valves larger than 3") up to temperatures of 70 degrees F
 5. Vent Hole:

- a. Provide valves equipped with 1/8-inch vent holes for all sodium hypochlorite (NaOCl) applications.
- 6. Materials of Construction:
 - a. Body, Ball, Carrier, End Connector, union Nut, and Stem:
 - 1) H707 PVC, ASTM D1784 1245A
 - b. Seat:
 - 1) PTFE.
 - c. O-rings:
 - 1) EPDM (water service).
 - 2) PTFE (chemical service).
 - d. Stop Ring:
 - 1) PVDF.
 - e. Handle:
 - 1) ABS
 - f. Ring:
 - 1) 304 SST

M. Diaphragm Valve (DV-Thermoplastic)

- 1. Description: Thermoplastic construction type, diaphragm valve.
- 2. Manufacturer/Model
 - a. Asahi Type 14.
- 3. End Connection:
 - a. True Union.
- 4. Pressure Rating:
 - a. 150 psi up to temperatures of 105 degrees F
- 5. Materials of Construction:
 - a. Body, Bonnet, Carrier, and Union Nut:
 - 1) PVC
 - b. Diaphragm and Cushion:
 - 1) EPDM.
 - c. O-rings:
 - 1) EPDM.
 - d. Handwheel:
 - 1) Polypropylene
 - e. Screw:
 - 1) 304 SST

N. Check Valve (CV-Thermoplastic)

- 1. Description: Thermoplastic construction type, ball check valve.
- 2. Manufacturer/Model
 - a. Asahi Type 14.
- 3. End Connection:
 - a. True Union.
- 4. Pressure Rating:
 - a. 150 psi up to temperatures of 120 degrees F
- 5. Materials of Construction:
 - a. Ball, Body, End Connector, Union Nut, and Stop Ring:
 - 1) PVC
 - b. Diaphragm and Cushion:
 - 1) EPDM.
 - c. Seat and O-rings:

- 1) EPDM (water service).
- 2) PTFE (chemical service).

O. Overflow Check (CV-Overflow)

1. Description: Wafer style, full face check valve.
2. Manufacturer/Model
 - a. Tideflex Waterflex.
3. End Connection:
 - a. Flanged.
4. Pressure Rating:
 - a. 50 psi.
5. Materials of Construction:
 - a. Disc:
 - 1) 304 SST.
 - b. Waterflex Membrane:
 - 1) EPDM.

2.4 AIR RELEASE VALVES

A. Combination Air Valve (CAV)

1. Description:
 - a. AWWA C-512 combination air/vacuum valve.
2. General:
 - a. The CAV shall be designed to allow large quantities of air to escape out the orifice when filling a pipeline and to close water tight when the liquid enters the valve. The Air/Vacuum Valve shall also permit large quantities of air to enter through the orifice when the pipeline is being drained to break the vacuum. The discharge orifice area shall be equal or greater than the inlet of the valve.
 - b. The valve shall consist of a body, cover, baffle, float and seat. The baffle will be designed to protect the float from direct contact of the rushing air and water to prevent the float from closing prematurely. The seat shall be fastened into the valve cover without distortion and shall be easily removed, if necessary. The float shall be stainless steel, and shall be center guided into the seat.
3. End Connection:
 - a. NPT Threaded.
4. Materials of Construction:
 - a. Body and Cover:
 - 1) ASTM A126 Gr.B Cast iron or ASTM A536 Gr 65-45-12 Ductile Iron.
 - b. Float:
 - 1) 304 SST.
 - c. Seat:
 - 1) Buna-N.
5. Rated Pressure: 175 psi.
6. Manufacturer/Model:
 - a. DeZURIK (APCO)/AVV.
 - b. GA
 - c. Crispin
 - d. VAL-MATIC
7. All CAVs shall include a SST ball valve for isolation. Contractor shall field route drain piping for CAV to the nearest floor or trench drain. Piping from host pipe to CAV shall be SST, pipe from ARV to drain shall be SCH 80 PVC.

- B. Air Release Valve (ARV)
 - 1. Description:
 - a. AWWA C-512 combination air valve.
 - 2. General:
 - a. Float operated and shall incorporate a simple lever mechanism to enable the valve to automatically release accumulated air from a fluid system while that system is pressurized and operating.
 - 3. End Connection:
 - a. NPT Threaded.
 - 4. Materials of Construction:
 - a. Body and Cover:
 - 1) ASTM A126 Gr.B Cast iron or ASTM A536 Gr 65-45-12 Ductile Iron.
 - b. Float, seat, needle, linkage, all other internals, and hardware:
 - 1) 304 SST.
 - 5. Rated Pressure: 175 psi.
 - 6. Manufacturers:
 - a. DeZURIK (APCO)/ARV.
 - b. GA
 - c. Crispin
 - d. VAL-MATIC
 - 7. All ARVs shall include a SST ball valve for isolation. Contractor shall field route drain piping for ARV to the nearest floor or trench drain. Piping from host pipe to ARV shall be SST, pipe from ARV to drain shall be SCH 80 PVC.

2.5 ACTUATORS - MANUAL

- A. Type: Hand-wheel, lever, chain-wheel, chainlever or operating nut.
- B. Location
 - 1. Hand-wheel or Lever: Comply with Schedules
 - 2. Chain-wheel or Chainlever: All valves with centerline more than 6'-0" above the operating floor level.
 - 3. Operating Nut: 2 inch square, all buried valves unless otherwise specified in Schedules
- C. Gearing
 - 1. Refer to individual valve specification.
 - 2. Location: All valves requiring operating torque in excess of that provided by maximum pull of 80 lb on hand-wheel or chain-wheel or maximum input of 150 ft lb on operating nuts.
 - 3. Design: Totally enclosed.
- D. Chain-Wheel Operator Details
 - 1. Chain-Wheel: Manufacturer's standard design or sprocket wheel bolted directly to valve hand-wheel.
 - 2. Chain Length and Size: Provide aluminum alloy chain for all chain-wheel-operated valves. Length of chain shall be such that chain comes within 3'-6" of the floor.
 - 3. Chain-Hold Device: Equip each operator with 1/2-inch hook bolt located to hold chain from walking area.
- E. Additional Butterfly Valve Operator Details
 - 1. Stop-limiting Devices: Provide for open and closed position.

2. Design: Adequate to avoid damage to all components from 200 lb pull on hand-wheel or chain-wheel operators, or 300 ft lb input torque on operating nuts.
3. Comply with all applicable AWWA standards.

2.6 ELECTRIC ACTUATORS - MODULATING

- A. All electric actuators shall conform to the requirements of AWWA C-542.
- B. All actuators shall be multi-turn type with gearbox, suitable for modulating service.
- C. Refer to the valve schedule for service conditions.
- D. Actuators shall contain motor, gearing, manual over-ride, limit switches, torque switches, drive coupling, integral motor controls, position feedback transmitter, and digital position indicator.
- E. Motor
 1. Designed for actuator service.
 2. Induction type.
 3. Insulation: Class H.
 4. Protected by thermal switches imbedded in the motor windings.
 5. Totally enclosed, non-ventilated.
 6. Voltage: As indicated on the electrical drawings.
- F. Actuator and Gearbox Enclosure:
 1. Valves inside tanks, vaults, trenches, or other submersible locations: IPS 68.
 2. All other locations: NEMA 4X.
- G. External Fasteners
 1. Stainless steel.
 2. Fasteners on terminal compartments shall be captured to prevent loss while cover is removed.
- H. Gearing
 1. Oil-lubricated.
 2. Designed to withstand full stall torque of the motor.
- I. Manual Operation
 1. Manual over-ride shall be by handwheel.
 2. Manual operation shall be via power gearing.
 3. Return from manual to electric mode of operation shall be automatic upon motor operation.
 4. A seized or inoperable motor or power gearing shall not prevent manual operation.
 5. Manual operation shall be possible with electric components removed.
- J. Limit Switches
 1. Limit switches shall be furnished at each end of travel.
 2. Switch adjustment shall not be altered by manual operation.
 3. Switches shall be capable of quick adjustment without removing covers.
 4. Furnish two sets of normally open and two sets of normally closed contacts at each end of travel. Contacts shall be capable of reliably switching low voltage DC source from the control system.

- K. Torque Switch
 - 1. Furnish torque switch at each end of travel.
 - 2. Switch shall trip when the valve load exceeds the switch setting.
 - 3. Switch adjustment device shall be calibrated directly in percent of torque.
- L. Wiring: Wiring shall be terminated at a separately sealed terminal compartment.
- M. Temperature Range: Actuator shall be capable of operating in an ambient temperature range of -20 to +160 deg F (with motor controls).
- N. The required dynamic valve torque shall be no more than 60% of the electric actuator's maximum rated breakaway torque. Power gearing shall have zero backlash between the motor and actuator output.
- O. All actuators shall be provided with the following:
 - 1. Feedback potentiometer.
 - 2. Reversing starter.
 - 3. Control transformer.
 - 4. Phase rotation correction.
 - 5. Monitor relay.
 - 6. Positioner capable of accepting a 4-20 mA DC command signal and positioning the valve by comparing the command signal with the present valve position as indicated by the feedback potentiometer. The positioner shall be field adjustable to fail to the open, closed, or last position on loss of signal.
 - 7. "Open - Close" pushbuttons.
 - 8. "Local - Off - Remote" selector switch.
 - 9. Red and green indicating lights or LED's.
- P. Manufacturer: AUMA.

2.7 ELECTRIC ACTUATORS – FOR ON/OFF SERVICE

- A. All electric actuators shall conform to the requirements of AWWA C-542.
- B. All actuators shall be multi-turn type with gearbox, suitable for modulating service.
- C. Refer to the valve schedule for service conditions.
- D. Actuators shall contain motor, gearing, manual over-ride, limit switches, torque switches, drive coupling, integral motor controls, and digital position indicator.
- E. Motor
 - 1. Designed for actuator service.
 - 2. Induction type.
 - 3. Insulation: class H.
 - 4. Protected by thermal switches imbedded in the motor windings.
 - 5. Totally enclosed, non-ventilated.
 - 6. Voltage: As indicated on the electrical drawings.
- F. Actuator and Gearbox Enclosure:
 - 1. Valves inside tanks, vaults, trenches, or other submersible locations: IPS 68.

2. All other locations: NEMA 4X.
- G. External Fasteners
1. Stainless steel.
 2. Fasteners on terminal compartments shall be captured to prevent loss while cover is removed.
- H. Gearing
1. Oil-lubricated.
 2. Designed to withstand full stall torque of the motor.
- I. Manual Operation
1. Manual over-ride shall be by handwheel.
 2. Manual operation shall be via power gearing.
 3. Return from manual to electric mode of operation shall be automatic upon motor operation.
 4. A seized or inoperable motor or power gearing shall not prevent manual operation.
 5. Manual operation shall be possible with electric components removed.
- J. Limit Switches
1. Limit switches shall be furnished at each end of travel.
 2. Switch adjustment shall not be altered by manual operation.
 3. Switches shall be capable of quick adjustment without removing covers.
 4. Furnish two sets of normally open and two sets of normally closed contacts at each end of travel. Contacts shall be capable of reliably switching low voltage DC source from the control system.
- K. Torque Switch
1. Furnish torque switch at each end of travel.
 2. Switch shall trip when the valve load exceeds the switch setting.
 3. Switch adjustment device shall be calibrated directly in percent of torque.
- L. Wiring: Wiring shall be terminated at a separately sealed terminal compartment.
- M. Temperature Range: Actuator shall be capable of operating in an ambient temperature range of -20 to +160 deg F (with motor controls).
- N. The required dynamic valve torque shall be no more than 60% of the electric actuator's maximum rated breakaway torque. Power gearing shall have zero backlash between the motor and actuator output.
- O. All actuators shall be provided with the following:
1. Reversing starter.
 2. Control transformer.
 3. Phase rotation correction.
 4. Monitor relay.
 5. "Open - Close" pushbuttons.
 6. "Local - Off - Remote" selector switch.
 7. Red and green indicating lights or LED's.
- P. Manufacturer: AUMA.

2.8 PNEUMATIC ACTUATORS

A. General

1. Pneumatically operated spring return actuators of the rack and pinion design, totally enclosed in a single enclosure with no external moving parts.
2. Actuators shall travel a minimum of 95 degrees in each direction to allow for over travel adjustment.
3. Output torque shall be linear throughout travel.
4. Factory lubricated with no field lubrication required.
5. Capable of mounting in any position without loss of performance.
6. Suitable for both on/off and throttling applications.
7. Heavy duty mechanical limit switches with solid state analog position feedback.
8. Visual position indicator.
9. Dual travel stops.
10. Manual over-ride on solenoids.
11. Adjustable open/close speed control.
12. Output torque: 44,130 lb-in minimum.

B. Materials of Construction:

1. Body and Endcaps:
 - a. Extruded, anodized aluminum alloy.
2. Pistons:
 - a. Die cast aluminum alloy.
3. Output Shaft/Pinion:
 - a. 304 SST.
4. Travel stops:
 - a. Alloy steel.
5. Shaft bearings and piston guides:
 - a. Acetal.
6. Fasteners:
 - a. 304 SST.
7. Spring:
 - a. Spring steel with protective coating.
8. O-ring seals:
 - a. Buna-N.
9. Temperature Rating:
 - a. -4 to 200 degrees F.
10. Pressure Rating:
 - a. Up to 140 psig.

C. Manufacturer: Bray Series 93 or Engineer Approved Equal.

2.9 ACCESSORIES

A. Flow Straighteners (Inlet Flow Conditioners)

1. Provide where indicated on process drawings.
2. Provide a certified drawing including dimensions, weight, welding requirements, material designations, material thicknesses and flange details for review with pump submittal.
3. Provide flow conditioning grid design approved by a nationally recognized physical hydraulic modeling laboratory.

- a. For pipe sizes larger than 18-inch provide a design based on physical hydraulic modeling by a nationally recognized physical hydraulic modeling laboratory
- 4. Design Criteria:
 - a. Spool, Minimum Length: 1 x Pipe diameter
 - 1) Ends: Flanged: ANSI 150-lb standard
 - 2) Type: Van Stone flat face rings and back-up flanges
 - b. Grid, Minimum Length: 1 x Pipe diameter
 - 1) Thickness: 0.125 inch (3 mm)
 - 2) Grid Spacing: 4 inch (100 mm) nominal
 - 3) Velocity: Maximum 7 ft/s (2.13 m/s).
- 5. Materials:
 - a. Spool: Type 316L A778 welded stainless steel pipe, Schedule 10S
 - b. Van Stone flat face rings and back up flanges: Type 316L stainless steel
 - c. Hardware: Type 316 stainless steel
- 6. Finish:
 - a. Pickled and passivated
 - b. Completely immerse for a minimum of 15 minutes in 10 percent nitric acid and 3 percent hydrofluoric acid at 125 degrees Fahrenheit, followed by a neutralizing rinse.
- 7. Manufacturers:
 - a. Flow Optimizers, LLC.
 - b. Or Engineer approved equal.

B. Fire Hydrants

- 1. Cast Iron, conform to AWWA C-502, dry-barrel type.
- 2. Bell Connection Size: 6-inch.
- 3. Pumper Connection: One 4-1/2-inch diameter NST connection.
- 4. Main Valve Opening: 5-inch diameter Storz fitting and cap.
- 5. Hydrants shall have a 5-1/4-inch bronze to bronze seat.
- 6. Depth of Bury:
 - a. Watermain 12-inches and less in diameter: 5'-0"
 - b. Watermains greater than 12-inches in diameter: 5'-6"
- 7. Threads on nozzles shall match those standard for local fire department.
- 8. All valve shall open left.
- 9. Manufacturers:
 - a. Mueller A-423 Super Centurion
 - b. Kennedy 81A
 - c. Darling B62B
 - d. Clow Medallion

C. Pressure Gauges and Compound Gauges

- 1. Dial Size:
 - a. 4-inch minimum.
- 2. Accuracy:
 - a. Not less than 1/2 of 1% of scale range.
- 3. Connection:
 - a. 1/2-inch NPT male connection
- 4. Dampening:
 - a. Provide dampener (Ashcroft No. 1106 or equal) for each high service discharge gage.
- 5. Manufacturers:

- a. Ashcroft/Duragauge.
- b. AMETEK/Solfront 1929.
- c. McDaniels/MPB/SC.
- 6. Materials of Construction:
 - a. Case:
 - 1) Phenolic, PET turret, or fiber reinforced thermoplastic.
 - b. Internals and wetted parts:
 - 1) 316 SST.
 - c. Dampening fluid:
 - 1) Glycerin.
- 7. Mounting and installation:
 - a. Provide SST piping and isolation valve. Refer to detail on Drawings.
- 8. Gage Schedule:
 - a. As shown on Drawings.

D. Y-strainer

- 1. Description: Sediment strainer to protect pipeline comments by removing suspended solids and impurities.
- 2. Manufacturer/Model
 - a. Asahi/sediment strainer.
 - b. Engineer approved equal.
- 3. End Connection:
 - a. True Union.
- 4. Pressure Rating:
 - a. 150 psig (85 psi for valves larger than 3”).
- 5. Screen Size:
 - a. 20 mesh.
- 6. Materials of Construction:
 - a. Body, screen support, end connection, union nut, retaining ring, and split ring:
 - 1) PVC with transparent body
 - b. Filter screen:
 - 1) PVC.
 - c. O-rings:
 - 1) EPDM (water service).
 - 2) PTFE (chemical service).
 - d. Stop Ring:
 - 1) PVDF.

E. Quick Connect Coupling

- 1. Material: Polypropylene.
- 2. Ends: 150 lb. Flat face flange x female.
- 3. Provide polypropylene lockable cap.
- 4. Manufacturer: Banjo Corporation.

F. Valve Appurtenances

- 1. Valve Extension Stems, Stem Guides, Wrenches and Keys
 - a. Extension Stem: Size at least as large as stem of operated valve.
 - b. Intermediate Stem Guide(s): Install for extensions more than 8 feet long or as shown on the Drawings.
 - c. Stem brackets and guides
 - 1) Cast iron having fully adjustable bronze bushed guide block.

- 2) Mounting: Comply with Division 40, Section "Pipe Supports".
 - 3) Stem brackets and guides located within the pre-treatment basins shall be 304 stainless steel as indicated on the drawings.
 - d. Operating nuts
 - 1) Provide 2-inch square nut with each extension stem.
 - 2) Locate in floor box or grating recess as required.
 - e. Number: Provide operating key or wrench of suitable length and size for each valve that is not readily accessible to direct operation.
- G. Valve Floor Boxes
- 1. Location: Provide at all valves operated from floor above.
 - 2. Construction
 - a. Material: Cast iron.
 - b. Depth: Metal floor slab thickness.
 - c. Cover: Cast iron with bronze bushing.
- H. Expansion Joints
- 1. Expansion joint shall allow axial compression or expansion, lateral movement, and axial deflection.
 - 2. Expansion joints shall be installed at the following locations:
 - a. Straight piping runs over 50 ft. and at least every 50 ft. for all interior PVC and CPVC chemical piping systems.
 - b. All locations as shown on the drawings.
 - 3. Materials of Construction:
 - a. All Materials shall be NSF approved.
 - b. Elastomer:
 - 1) EPDM.
 - c. Retaining rings:
 - 1) 304 SST.
 - d. Control units, nuts, and washers:
 - 1) 304 SST.
 - 4. Install expansion joints in tension to facilitate removal.
 - 5. Manufacturer/Model:
 - a. Proco/Style 231.
 - b. Engineer Approved Equal.

PART 3 - EXECUTION

3.1 VALVES, GATES AND ACCESSORIES: INSTALLATION

A. General

- 1. Install in accordance with Manufacturer's recommendations.
- 2. Install valves for convenient operation of hand-wheels or wrenches from the operating floor without interfering with access as acceptable to the Engineer or Owner.
- 3. Orientation of Valves
 - a. Install valves plumb and level unless otherwise approved.
 - b. Install valves free from distortion and strain caused by misaligned piping, equipment or other causes.

B. Fire Hydrants and Extensions

- 1. Fire Hydrants

- a. Locate approximately as shown on the Drawings with final location and setting determined in field by Engineer.
 - b. Individually valve all new fire hydrant leads.
 - c. Use mechanical joint anchoring fittings as shown.
 - d. Install hydrants with suitable concrete backing and gravel fill for drainage as shown on Drawings.
 - e. Do not obstruct drain openings.
2. Hydrant Extensions
- a. Provide complete, including barrel and stem sections, where shown on Drawings or directed by Engineer.
 - b. The Engineer or Owner reserves right to order extensions installed before or after hydrant setting.
- C. Tapping Sleeves and Valves
- 1. Install where shown on the Drawings.
 - 2. Install under pressure in strict accordance with Manufacturer's recommendations.
 - 3. Satisfactorily test under 150 psi pressure prior to cutting operations. If leaks appear, make repairs and re-test.
- D. Corporation Stops: Install at all points shown and where required to avoid air binding of piping systems.
- E. Valve Appurtenances
- 1. Valve Boxes
 - a. Install plumb with the bodies centered directly over the valves.
 - b. Carefully tamp earth fill around each box to a distance of 4 feet on all sides.
 - c. Tamp earth fill to the undisturbed trench face, if less than 4 feet.
- 3.2 WORK AFFECTING EXISTING PIPING
- A. Location of Existing Piping
- 1. Locations of existing piping shown shall be considered approximate.
 - 2. Contractor is responsible for determining exact location of existing piping to which he must make connections, may disturb during earth moving operations, or may affect in any way by his work.
- B. Removing Existing Pipelines from Service
- 1. Pipelines shall not be removed from service unless approved by the Engineer or Owner.
 - 2. Notify the Engineer and Owner at least 48 hrs prior to taking pipeline out of service.
- C. Work on Existing Pipelines
- 1. Cut piping as shown or required using machines designed specifically for this work.
 - 2. Install temporary plugs to keep out all mud, dirt, water and debris.

END OF SECTION 40 0523

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 40 9000

PLANT INSTRUMENTATION AND CONTROL SYSTEM GENERAL REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Provide all labor, materials, equipment, and incidentals as shown, specified, and required to furnish, install, calibrate, test, and place in satisfactory operation, instrumentation and control system equipment necessary to perform specified functions in accordance with the requirements of Sections 40 9XXX and the Drawings. The system includes, but is not necessarily limited to, the following equipment:
1. Primary sensor/transducers, field instruments, and associated mounting hardware as specified in Section 40 9100, Primary Sensors and Field Instruments.
 2. Local control panels, monitoring panels, and existing panel modifications as shown on the Drawings.
 3. An expansion of the existing plant-wide control system including processors, communication modules, input/output modules, operator interface stations, as specified and as shown on the Drawings.
 4. Interconnecting cables, wiring, and associated components. Ethernet networking components such as switches, transceivers, fiber optic and twisted-pair patch panels and patch cables, and equipment enclosures as specified and shown in the Contract Documents and in Section 40 9553, Network Devices.
- B. Configuration and programming of control system end devices such as but not limited to: instruments, device serial networks, actuator master stations, variable frequency drives, motor protection units, actuators, etc., shall be provided by the Contractor. Unit process logic residing in the process area PLC(s), OIT system and/or HMI system depicting the process monitoring and controls shall be provided by the Contractor.
- C. This Section and the other Division 40 Sections illustrate and describe the overall instrumentation and control system functional and operational requirements.
- D. Contractor shall conform to the requirements specified within Division 40 9000 for the selection of equipment and materials, installation methods, configuration and programming. In addition, it should be noted that Division 40 9000, Plant Instrumentation and Control System General Requirements, are not limited to work in this Division, but are also imposed for equipment and systems specified in other Divisions of the Contract Documents.
- E. Related Sections:
1. Section 40 9100, Primary Sensors and Field Instruments
 2. Section 40 9443, Plant Control System
 3. Section 40 9513, Control Panels
 4. Section 40 9553, Network Devices

1.2 REFERENCES

- A. Reference Standards: The following organizations have generated standards that are to be used as guides in assuring quality and reliability of components and systems; govern nomenclature; define parameters of configuration and construction, in addition to specific details in this Specification and the Drawings.
1. American National Standards Institute (ANSI)
 2. ANSI C1, "National Electrical Code" (NEC)
 3. Factory Mutual (FM)
 4. Institute of Electrical and Electronic Engineers (IEEE)
 5. Instrumentation, Systems, and Automation Society (ISA)
 6. Society of Automotive Engineers (SAE)
 7. National Electrical Manufacturers Association (NEMA)
 8. National Fire Protection Association (NFPA)
 9. National Institute of Standards and Technology (NIST)
 10. Scientific Apparatus Makers Association (SAMA)
 11. Underwriters Laboratories (UL)
 12. Occupational Safety and Health Administration (OSHA)

1.3 DEFINITIONS

- A. Control System: The Control System shall be comprised of all the instrumentation and control system equipment throughout the Contract Documents, including but not limited to:
1. Instrument loop components including, but not limited to: primary elements, sensors, transducers, transmitters, indicators, controllers, and recorders.
 2. Final operators or control elements including, but not limited to: control valves, solenoids, motors, adjustable frequency drives, and louver operators.
 3. Indicating and control devices including, but not limited to: operator interface terminals, pushbuttons, selector switches, pilot lights, recorders, and indicators.
 4. Ancillary components including, but not limited to: instrument power supplies, signal repeaters, signal isolators, current trips, adder/subtractor modules, relays, and timers.
 5. Instrumentation power requirements including, but not limited to: dedicated power, power conditioning, uninterruptable power supplies, and grounding systems.
 6. Cabinets, consoles, panels, and enclosures
 7. Alarm systems
 8. Boiler controls and control systems
 9. Controls for process equipment and systems including, but not limited to: service pumps, chemical systems, filtration, sample pumps, sump pumps, and treatment systems
 10. Motor controls
 11. Programmable controllers (PLCs)
 12. Distributed control systems (DCSs)
 13. Supervisory control and data acquisition systems (SCADA)
 14. Wiring and conduit
 15. Network Communication system equipment and wiring
- B. Instrumentation and Control System Integrator: The instrumentation and control system integrator shall furnish a complete and integrated instrument and control system including, but not limited to: detailed design, engineering, fabrication, assembly, testing, checkout, commissioning, debugging, and training in accordance with the Contract Documents.

1.4 SYSTEM DESCRIPTION

A. General Design Requirements:

1. Power Supplies:

- a. All electrically powered equipment and devices shall be suitable for operation on 115 V +/- 10%, 60 Hz +/- 2 Hz power. If a different voltage or better regulation is required, a suitable regulator or transformer shall be provided.
- b. Appropriate 24 VDC power supplies for analog loop power shall be furnished for each two wire transmitter. Power supplies shall be mounted in control panels or enclosures.
- c. Provide power supplies sized for a minimum of 130% of the maximum simultaneous current draw of all connected load.
- d. A power on off switch or a molded case circuit breaker shall be furnished for each item requiring 120 VAC electrical power.
- e. Provide isolation transformers, transient voltage surge suppressers, line voltage regulators, and output line reactors for power distribution as required to eliminate electrical noise and/or transients entering on power lines.

2. Signal Requirements:

- a. The control system shall be designed to use 4 to 20 mA DC analog signals and/or digital communication networks as specified in Sections 40 9XXX, or as shown on Contract Drawings.
- b. Signal converters and repeaters shall be provided where required for proper interfacing. Power supplies shall be sized adequately for signal converter and repeater loads.
- c. Signals shall be isolated from ground. Shields of 4 to 20 mA and thermocouple 2-wire systems shall be grounded at a single point only. Ground 4 to 20 mA shields only at the control panel that contains the associated 2-wire loop power supply, unless shown otherwise. Ground thermocouple sensors at the thermocouple.
- d. This system will be used in a water treatment plant environment where there can be high energy AC fields, DC control pulses, and varying ground potentials between the sensors/transducers and the system components. The system design shall be adequate to provide proper protection against interferences from all such possible situations.

3. Miscellaneous:

- a. All new equipment provided shall be listed by Underwriters Laboratory or other testing agency as defined in these Specifications. Such listing requirements only apply for equipment where such listings exist.
- b. All instrumentation and control system components shall be heavy duty types, suitable for continuous service in a municipal water treatment plant environment.
- c. All similar components shall be products of a single manufacturer and shall consist of equipment which are currently in production and shall remain in production for at least 2 years.
- d. All instrumentation and control system components shall be designed to automatically return to accurate measurement within 60 seconds upon restoration of power after a power failure or when transferred to standby power supply.
- e. Surge and lightning protection shall be provided for all power supplies, field instruments, and all other control system components to protect against damage by electrical surges.
- f. All field mounted instruments and system components shall be designed for installation in high humidity and corrosive service conditions. All field mounted instrument enclosures, junction boxes, and appurtenances shall have a NEMA 4X endorsement, at a minimum. Hazardous areas require a NEMA 7 endorsement.

- g. All components with interconnections to field devices shall be wired through terminal blocks. Integral terminals, such as that of a relay, are not an acceptable alternate.
 - h. All components furnished including field and rear of panel instruments shall be tagged with the item number and nomenclature indicated on the Contract Documents and/or approved Shop Drawings.
 - i. Ranges and scales specified herein shall be coordinated to suit field conditions and equipment furnished.
 - j. Field mounted devices, instruments and control panels/enclosures located outdoors shall be protected from exposure to freezing temperatures and from overheating due to prolonged exposure to high ambient temperatures and shall be provided with sunshields where necessary to protect the enclosure surfaces from the additional heating effects of exposure to direct sunlight.
 - k. Field instruments mounted in hazardous areas shall be provided as “factory sealed” units whenever available which can be installed in non-explosion proof enclosures in Division 2 areas and in explosion proof enclosures in Division 1 areas, in both cases without the need for conduit seals.
4. System Designs:
- a. Range, scale, and setpoint values specified are for initial setting and configuration. Modifications to these values may be required based on actual equipment furnished and as necessary to implement proper and stable process actions which are determined as systems are placed in operation. These modifications shall be done by Contractor at no additional cost to the Owner.
 - b. For any items where ranges, scales, and setpoints may not have been specified, Contractor shall submit a recommendation to the Owner for review.

1.5 SUBMITTALS

A. Product Data: Control System Components Submittal Requirements:

1. Sensors/transducers and field instruments: Product data and Manufacturer’s literature include the following:
 - a. Instrument Specification Form: SP20 Instrumentation Specification Forms were developed by the ISA Standards Committee for most commonly used instruments. Submit a completed SP20 instrument specification form for each instrument.
 - b. Manufacturer’s product name and model number and all required accessories
 - c. Instrument tag number from Contract Documents
 - d. Manufacturer’s standard catalog product data with irrelevant sections crossed out.
 - e. Description of construction features
 - f. Performance and operation data
 - g. Installation and mounting details, instructions, and recommendations
 - h. Identification of all wiring interconnections and points of connection
 - i. Service requirements
 - j. Dimensions
2. Programmable Controller (PLC) System Information:
 - a. System Description:
 - 1) Detailed block diagram showing system hardware configuration and identifying manufacturers and model numbers of system components.
 - 2) Format, protocol, and procedures for remote communications and local communications with input/output modules and peripheral devices
 - 3) On-line and off-line capabilities for programming, system utilities and diagnostics

- 4) Input/output point listing with I/O module cross reference identification
- 5) List of repair parts and test equipment
- b. Equipment Hardware:
 - 1) Manufacturer's standard catalog product data for all system components
 - 2) Layout drawings showing front, rear, end, and plan views to scale of all processing equipment, I/O components, power supplies, and peripheral devices.
 - 3) Construction details, features, and procedures
 - 4) Interconnection diagrams including termination details, cable identification lists, and cable lengths
 - 5) Plans showing equipment layout in control panels
 - 6) Installation requirements, instructions, and/or recommendations
- c. Software Description:
 - 1) Standard technical documentation covering all aspects of the programmable controller software functions and capabilities, including functional descriptions and programming procedures related to control, monitoring, logging, and alarming functions.
 - 2) Documentation describing memory type, size and structure, and listing I/O and Data Table memory and size of memory available for programs.
3. Control Panel and Enclosure Information:
 - a. Layout Drawings shall include the following:
 - 1) Front and plan views to scale
 - 2) Dimensional information
 - 3) Tag number and functional name of components mounted in and on panel or enclosure
 - 4) Product information on all panel components:
 - a) Manufacturer's product name and model number
 - b) Instrument tag number from Contract Documents
 - c) Manufacturer's standard catalog product data with irrelevant information crossed out
 - d) Description of construction features
 - e) Performance and operation data
 - f) Installation and mounting details, instructions, and recommendations
 - g) Identification of all wiring interconnections and points of connection
 - h) Service requirements
 - i) Dimensions
 - 5) Nameplate location and legend including text, letter size, and colors to be used
 - 6) Location of anchoring connections and holes
 - 7) Location of external wiring and/or piping connections
 - 8) Mounting and installation details
 - b. Panel schematic and internal point-to-point wiring and/or piping diagrams shall include the following:
 - 1) Name of panel or enclosure
 - 2) Wiring sizes, types, and numbers
 - 3) Piping sizes, types, and numbers
 - 4) Terminal strip and block numbers for all interconnections.
 - 5) Color coding
 - 6) Functional name and manufacturer's designation for components to which wiring and piping are connected

- c. Electrical control schematics in accordance with SAE HS-1738 standards for all circuits indicated in the specifications or on the Contract Drawings. Generic or typical wiring diagrams, not specific to equipment being provided, will not be accepted. Tables or charts to describe wire numbers will not be accepted. All wires shall be labeled and shown on the submittal drawings as shown on the sample drawings at the end of this Section.
- d. Plan showing control panel and enclosure equipment layout in each area.
- e. Stock lists or Bill of Materials for each panel including tag number, functional name, manufacturer's name, manufacturer's model number, and quantity for all components mounted in or on the panel or enclosure. Bill of Materials shall include the information shown on the sample drawings at the end of this Section.
- f. Heat calculations for each panel or enclosure to verify that there is sufficient dissipation and/or generation of heat to maintain interior panel temperatures within the maximum and minimum operating temperature of all panel components with ambient temperatures as specified below.
- g. Samples:
 - 1) One (1) sample nameplate for exterior panel mounting
 - 2) One (1) sample nameplate for interior panel device mounting
 - 3) One (1) sample terminal block
 - 4) Three (3) sample wire labels
- 4. Field Wiring (Riser) Diagrams:
 - a. Shall include the following:
 - 1) Wiring and conduit sizes, types, and numbers
 - 2) Terminal strip numbers for each wire termination
 - 3) Color coding
 - 4) Location, functional name, and manufacturer's designation of items to which wiring and/or piping are connected
 - 5) Point to point wiring diagrams shall include all interconnections between field devices, panels, control stations, lighting panels, and motor starters.
- 5. PLC I/O Loop Wiring Diagrams:
 - a. Prepare drawings on a module-by-module basis and include the following information:
 - 1) Rack numbers, module type and slot number, and module terminal point numbers. Also include location and identification of all intermediate panel and/or field terminal block and strip numbers to which I/O wiring and power supply wiring is connected. Identify all power supply circuit numbers and ratings.
 - 2) Wiring sizes, type, wire numbers and color coding
 - 3) Designation of conduits in which field I/O wiring is routed
 - 4) Location, functional name, tag numbers and manufacturer model numbers of panel and field devices and instruments to which I/O wiring is connected. For discrete I/O devices use P&ID electrical symbols tagged with designation shown on SAE HS-1738 drawings.

B. Operation and Maintenance (O&M) Manuals:

- 1. Operating and Maintenance Instructions, the Instrumentation and Control System O&M Manuals shall include:
 - a. Name, address, and telephone number of each manufacturer's local service representative. Also include internet web site URL and email address when available.

- b. Complete list of supplied system hardware parts with full model numbers referred to system part designations, including spare parts and test equipment provided.
 - c. Copy of all approved submittal information and system shop drawings as specified herein with corrections made to reflect all shop drawing review comments and the actual system as tested and delivered to the site for installation.
 - d. Manufacturer's Original Copies of Hardware, Installation, Assembly, Programming, and Operations Manuals for all control system components. Manuals shall include the following information:
 - 1) General descriptive information covering the basic features of the equipment
 - 2) Physical description covering layout and installation requirements and all environmental constraints
 - 3) Standard technical documentation covering the procedures for programming, operation, start-up, shutdown, and calibration of the equipment and explaining how the various control functions are performed.
 - 4) Principles of operation explaining the logic of operation; provide information covering operation to a component level.
 - 5) Maintenance procedures covering checkout, troubleshooting, and servicing; checkout procedures shall provide the means to verify the satisfactory operation of equipment, trouble-shooting procedures shall serve as a guide in determining faulty components, and servicing procedures shall cover requirements and recommended time schedule for calibration, cleaning, lubrication and other housekeeping and preventive maintenance procedures.
 - 6) Wiring, schematic, and logic diagrams
 - 7) Safety considerations relating to operation and maintenance procedures
 - 8) Manufacturer's recommended spare parts list with model numbers
2. After the initial Operating and Maintenance Instructions have received an acceptable disposition, the manual has been field verified and all final corrections have been made by the Contractor, submit 2 electronic versions of the approved manuals on CD to the Owner.
- a. The electronic color copy shall be an original, computer generated multi-page Portable Document Format (PDF) file. Scans or pictures of document text will not be accepted.
 - 1) Provide a hyperlinked and bookmarked colored index page hyperlinked and bookmarked to appropriate pages. There shall be a universal return to the index on all pages linking back to the index page.
 - 2) All oversized pages shall be properly sized (to original dimensions) and orientated correctly.
 - 3) Each PDF file shall be no larger than 100 Mb. Any additional files shall be suffixed with an underscore and a number indicating its position.
 - b. Data files, such as those for drawings, source code, ladder logic, etc. shall be submitted in its native electronic format, in addition to PDF form for printing.
 - c. If self-adhesive labels are provided, it must fully cover the CD and be exactly centered on the CD. The front surface of the CD shall contain the following type written information:
 - 1) Contract number
 - 2) Specification Section number
 - 3) Submittal number
 - 4) Brief submittal description
 - 5) Submittal date

C. Supplier's Qualifications:

1. Shall submit experience of successful instrumentation and control system equipment installations as specified in paragraph 1.6 of this Section.
- D. Installation/Inspection Data:
1. Prior to commissioning, furnish to Owner an installation inspection report certifying that all equipment has been installed correctly and is operating properly.
 2. The report shall describe the inspection and test procedure and include any repairs, modifications, or other work performed during the factory test or on-site.
 3. The report shall be signed by the Contractor and the system integrator's authorized representative.
- E. Product/Material Certifications
1. Submit to the Owner certified calibration certificates for field instruments and devices specified in Section 40 9XXX, a minimum of 3 weeks prior to commissioning.
 - a. Receipt of any calibration certificate shall in no way imply acceptance of any work or instrument.
 - b. The calibration certificates shall contain the information shown on the sample calibration certificate included at the end of this Section.
 - c. Each calibration certificate shall be signed and dated by the authorized manufacturer's representative and Contractor.
- F. Record Drawings and Documentation:
1. All revised shop drawings and documentation shall be submitted to the Engineer to replace out dated drawings and documentation contained in the System O&M Manuals. Specific instructions for out dated drawing removal and replacement shall be provided with the record drawing submittal.
 2. Record Drawings shall include all data required to identify, locate, and trace circuits.
 - a. Required data shall include, but not be limited to, equipment names, conduit numbers, boxes, conductor labels and colors, and terminals.
 - b. Control Panel Layout Drawings shall include, but not be limited to, the following information:
 - 1) Bill of materials identifying all components
 - 2) Enclosure layouts (interior and exterior) including face, sides, back, and subpanels identifying all components
 - 3) Nameplate legend for all components
 - c. Interconnect Wiring Diagrams shall include, but not be limited to, the following information:
 - 1) Identify all wiring components between each end device and PLC terminal(s).
 - 2) Conductor labels shall be consistent throughout loops.
 - d. Control Diagrams shall include, but not be limited to, the following information:
 - 1) Index of equally spaced reference numbers along left side of Control Diagram
 - 2) Include terminal numbers/colors for each control component.
 - e. Provide separate connection drawings for components requiring greater number of interconnects to maintain clarity of information.
 - 1) Information shall include terminal numbers, conductor labels, point, polarity, and function.
 - f. Terminal strip drawings shall include terminal strip name, number, point, and conductor label on each side of terminal.

- g. PLC rack layout drawings shall include physical module/slot configuration along with point number and description.
- 3. All Electrical and Instrumentation Record Drawings shall be submitted in hard copy format.

G. Commissioning Procedures and Documentation:

- 1. Provide the following approved and updated documentation for use before system commissioning.
 - a. Complete panel schematic and detailed internal point-to-point wiring interconnect drawings
 - b. Complete electrical control schematics
 - c. Complete panel layout drawings
 - d. Complete field wiring diagrams
 - e. The drawings corrected and modified by the Contractor during commissioning shall form the basis for the “As-Built” record drawing requirement as specified in this Section.

H. Storage Requirements:

- 1. System Integrator shall submit to Owner the storage requirements and recommendations for the equipment prior to shipment.

1.6 QUALITY ASSURANCE

A. General:

- 1. The instrumentation and control system shall be furnished by a single supplier who shall assume responsibility for providing a complete and integrated system.
- 2. All equipment, components, and materials required shall be furnished by the single supplier who shall assume the responsibility for adequacy and performance of all items.
- 3. The supplier shall identify those system components which are not of his manufacture.
- 4. The supplier shall supply his company’s quality assurance plan, and for components which are not of his manufacture, the component manufacturer’s quality assurance plan. The plans shall include but not necessarily be limited to: method of testing, raw material criteria, methods of documentation, station control, “Burn In”, final tests, serialization coding, and packaging.

B. Instrumentation and Control System Integrator’s Qualifications:

- 1. Shall be a financially sound firm having at least 5 years continuous experience in designing, implementing, supplying and supporting instrumentation and control systems which are comparable to the instrumentation system in terms of hardware, software, cost, and complexity.
- 2. Shall have in existence at the time of bid advertisement, an experienced engineering and technical staff capable of designing, implementing, supplying, and supporting the instrumentation system and handling the submittal, testing, and training requirements.
- 3. Shall have an emergency response time ability of less than 4 hours to the project site.
- 4. Shall have a thorough working knowledge of water/wastewater treatment processes and control philosophy in accordance with standard practices of the water/wastewater treatment industry.
- 5. System Integrator shall be one of the following:
 - a. Dublin Technical Systems, Inc. of Dublin, Ohio
 - b. Dmytryka Jacobs Engineers, Inc. of Toledo, Ohio
 - c. Quality Controls, Inc of Cincinnati, Ohio

- C. Instrumentation and Control System Integrator's Responsibility:
1. Contractor shall retain the system integrator to assume the responsibilities specified below. However, execution of these specified duties by the system integrator shall not relieve Contractor of the ultimate responsibility for the control equipment.
 - a. Detailed design, engineering, fabrication, assembly, wiring, testing, and debugging of the instrumentation and control system in accordance with the Contract Documents, the reviewed submittal drawings, and all referenced standards and codes.
 - b. Preparation, assembly, submission, and correction of all instrumentation and control system submittals in accordance with the Contract Documents.
 - c. Proper integration and interfacing of the instrumentation and control system hardware, field devices, and panels including required interfacing with package control systems furnished by other equipment suppliers, with existing equipment, and with the plant electrical system.
 - d. Supervision of the installation of the instrumentation and control system, instruments, panels, cabinets, wiring, and other components require.
 - e. Calibration, testing, and startup of the instrumentation and control system.
 - f. Training of Owner personnel in operation and maintenance of the instrumentation and control system.
 - g. Handling of all warranty obligations for the control system components.
- D. Coordination and Progress Meetings:
1. Contractor and a representative of the system integrator shall be required to attend meetings applicable to this Section's scope of work.
 2. Representatives at the meetings shall have the competence and authority to make any and all necessary decisions. Decisions and statements made at the meetings shall commit the Contractor and system integrator to agreed procedures and schedules.
- E. System Integrator Project Personnel:
1. Contractor shall require the system integrator to provide the following project personnel:
 - a. Project Manager:
 - 1) The system integrator shall appoint a project manager who shall coordinate and schedule all work and assure that the project schedule is met.
 - 2) The project manager shall act as the liaison with Contractor for the installation of the instrumentation and control system equipment and shall assist in all matters required for proper coordination and interfacing of the equipment and processes.
 - b. Field Engineer:
 - 1) The system integrator shall appoint a field engineer with responsibilities as follows:
 - a) Provide advice and technical consultation relative to installation techniques and procedures for equipment furnished.
 - b) Provide guidance and support on-site throughout the control system installation and start-up period.
 - c) Installed system checkout, calibration, adjustment, and start up including tuning of every control loop.
 - d) Involvement in the onsite system training of plant personnel.
 - e) Resolving of control problems encountered during initial startup and testing of all instrumentation and control equipment.

- 2) The field engineer shall have a minimum of 5 years experience in systems engineering and start up and shall have a thorough working knowledge of the hardware supplied for the instrumentation and control system.
- c. The system integrator shall submit resumes for Field Engineer which detail their relevant experience as specified above.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Instrumentation and control system equipment shall be packaged at the factory prior to shipment to protect each item from damage during shipment and storage.
- B. All equipment shall be handled and stored in accordance with manufacturer's instructions and relevant organization standards. Owner shall have the right to inspect stored equipment.
- C. Packing and Shipping
 1. Package equipment as required to protect it from damage.
 2. Mount heavy items on pallets or skids to facilitate handling.
- D. Acceptance at Site
 1. Inspect all equipment at the time of delivery.
 - a. Ensure that no damage has occurred during shipment.
 - b. Verify make, model, and quantity.
 2. Record the following information:
 - a. Description/model of equipment.
 - b. Date and time of delivery.
 - c. Assessment of condition.
 3. Handle equipment carefully to prevent damage.
 4. Remove any damaged equipment from site and replace with new equipment.
- E. Storage and Protection.
 1. Store the equipment provided until it can be installed.
 2. Provide a clean, dry, heated, and dust-free location for storage.
 3. Such conditions must meet the requirements of the system integrator and manufacturer.

1.8 PROJECT/SITE CONDITIONS

- A. Interior Locations: The following are defined as interior locations:
 1. Any location within the boundaries of the foundation of any building.
 2. Any location within the superstructure of other structures not classified as buildings.
- B. Wet Locations: The following are defined as wet locations:
 1. All exterior locations.
 2. All interior locations below grade.
 3. All interior locations where wet materials are processed, pumped, transported, or stored.
- C. Corrosive Locations: The following are defined as corrosive locations.
 1. All locations with chemical feed/transfer equipment
 2. All locations with chemical storage tanks
 3. All locations where chemical storage drums are located.

- D. Environmental Conditions:
1. The control system shall be designed and constructed for continuous operation without forming condensation under the following temperature and humidity conditions:
 - a. Space Conditioned Areas shown on the Drawings:
 - 1) Ambient Temperature: normal conditions 59 to 90°F; abnormal conditions 40 to 104°F.
 - 2) Relative Humidity: normal conditions 20 to 80%
 - 3) Abnormal conditions up to 95%
 - b. Indoor locations for control panels and instruments:
 - 1) Ambient Temperature: 40 to 120°F
 - 2) Relative Humidity: 0 to 100%
 - c. Outdoor locations for instruments:
 - 1) Ambient Temperature: -30 to 120°F
 - 2) Relative Humidity: 0 to 100%
- E. Wet and Corrosive Areas:
1. Instruments and control system components shall be designed and constructed to provide adequate protection against corrosion from gases and chemical which are commonly found in water/wastewater treatment plant environments such as but not limited to zinc orthophosphate, ozone, oxygen, chlorine, and carbon dioxide.
- F. Portions of the instrumentation and control system will be located in areas that may be subjected to excessive vibrations. The control system integrator/manufacturer shall specify any vibration limitations which are required for the equipment and provide vibration proof mountings accordingly.
- G. Hazardous (Classified) Areas: Hazardous (classified) areas are defined as in accordance with the NEC, NFPA 820, and as shown on the Drawings. All equipment installed in these areas shall conform to requirements for installation in the designated hazardous area as described in Articles 500, 501, and 502 of the NEC.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Mounting Hardware: Provide mounting hardware meeting the requirements of Division 26.
- B. Identification: Provide equipment identification meeting the requirements of Division 26.
- C. Calibrators and Programmers
1. Provide calibrators/programmers for all I&C equipment that cannot be calibrated from the controls built into the unit.
 2. Provide a minimum of one calibrator/programmer for each type of equipment supplied.
- D. Adjustable Dead-Band
1. Provide dead-band adjustment for all output contacts from all I&C equipment.
 2. Provide a minimum of ± 10 percent adjustment.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Existing Conditions
 - 1. Compare the site and existing facilities with the Contract Documents.
 - 2. With respect to the conditions of the premises, locate connections of existing facilities and any obstructions that may be encountered and conduct work to minimize disruption to existing conditions.
- B. Field Measurements: Field-verify all locations and dimensions to ensure that the equipment will be properly located, readily accessible, and installed in accordance with all pertinent codes and regulations, the contract documents, and the referenced standards.

3.2 INSTALLATION - GENERAL

- A. General
 - 1. Equipment locations as shown on the drawings are approximate unless dimensioned.
 - 2. Coordinate equipment locations with existing conditions and adjust locations as required.
 - 3. The Contractor shall furnish, fabricate, and mount all instrument stands and brackets. Mounting of stands and instruments shall be per installation detail drawings. All stands must be level, plumb, rigid, and free from vibration. Additional support shall be added where required for vibration-free mounting.
 - 4. Once instrumentation and control equipment has been set in place, Contractor shall maintain Space Conditioned Areas dust-free and with the following environmental conditions:
 - a. Ambient Temperature: 65 to 80°F
 - b. Relative Humidity: 50 to 70%
 - c. Chlorine: ISA S71.04, Class G2 or better
 - 5. Provide temporary heating, cooling, dehumidification, humidification and air purification as necessary to provide the above conditions
- B. Instrumentation wiring is shown schematically on the plan or described by narrative in the specifications. Contractor to provide type and quantity of wiring necessary to perform the function specified in Sections 40 9XXX and shown on the Drawings. See Division 26 wire and cable sections for "uses permitted." Analog signal conductors and discrete signal conductors shall always be in separate conduits or cable tray compartments. Power wiring shall be in conduits and cable tray compartments separate from all signal wiring.
 - 1. The Contractor shall terminate field wiring for equipment specified under this section. The system integrator shall check instrument installation and field wiring before instrument devices are electrically powered by Contractor. Wires shall be terminated at terminal blocks with crimp type, preinsulated tongue lugs. Lugs shall be of the appropriate size for the terminal block screws and for the number and size of the wires terminated. All signal shields shall have only one ground point that shall be located at the closest control panel. Seal around all conductors inside conduits as they enter equipment. Use watertight seal (closed cell RTU foam type) entering or leaving every building, box, or instrument. Install conduit water relief or "weep" on the system side of all seals to prevent intrusion of water into the equipment.
 - 2. Spare Wiring: Signal and interlock wiring shall contain spare conductors in every raceway. Spare conductors shall be provided in pairs and shall be clearly and distinctly marked at every access point indicated where the pairs start and stop. The minimum number of spare pairs shall be 25 percent of the number of active pairs with a minimum of one spare pair.
- C. Valves

1. General Application: Use gate and ball valves for shutoff duty; globe and ball valves for throttling duty.
2. Access: Locate valves for easy access and provide separate support where necessary.
3. Unions: Install valves and unions for each fixture and item of equipment arranged to allow equipment removal without system shutdown.
4. Stems: Install valves in horizontal piping with stem at or above the center of the pipe.
5. Clearance: Install valves in a position to allow full stem movement.

D. Threaded Connections

1. Procedure
 - a. Note the internal length of threads in valve ends, and proximity of valve internal seat or wall to determine how far pipe should be threaded into valve.
 - b. Align threads at point of assembly.
 - c. Apply appropriate tape or thread compound to the external pipe threads (except where dry seal threading is specified).
 - d. Assemble joint, wrench-tight. Wrench on valve shall be on the valve end into which the pipe is being threaded.

E. Tagging

1. All instrumentation equipment shall be provided with identification tags in accordance with the plans and Division 26 Section "Electrical identification". Each field instrument shall have a stainless steel tag.
2. The device tags shall be mounted using stainless steel screws.

3.3 ADJUSTING

- A. Set Points: Alarm and control set points shall be adjusted to their operational values before the start of the field test.
- B. Calibration: Calibration adjustments shall be performed before the start of the field test. Testing shall commence after calibration verification for each instrument is provided to the Engineer.

3.4 FIELD QUALITY CONTROL

- A. Piping Tests: After piping systems have been put into service, inspect for leaks. Adjust pipes, valves, or fittings to stop leaks; replace equipment if leak persists.
- B. Field Test
 1. A technical representative of the system integrator and the Contractor shall perform a field test on the entire instrumentation and control system. All equipment provided by the system integrator and all interrelated equipment provided by other suppliers, such as pumps, blowers, valve operators, chemical feeders, motor controls, etc., shall be installed and operating properly before the test starts.
 2. All test equipment and materials shall be provided by the system integrator.
 3. As a minimum, the test shall consist of the following:
 - a. All wiring shall be checked at each termination point for correct wire size, type, color, termination, and wire number.
 - b. All instruments and devices shall be checked to verify compliance with the specifications and approved shop drawings. The calibration of analog devices shall be verified including the zero and span.

- c. Analog wiring shall be checked for correct polarity and ground continuity at each termination point in the loop.
- d. All digital inputs shall be activated at the field element to verify proper response on the OIT.
- e. All analog inputs shall be tested at the field transmitter over a full range to verify proper response at OIT. Analog loops shall be verified at each termination point at 0, 25, 50, 75 and 100% signal levels.
- f. All digital and analog outputs shall be forced, via the OIT, or PLC if necessary, to verify proper response at the final control element.
- g. Communications shall be tested between all components, including existing equipment.
- h. Verify proper calibration of all instruments by independent measurements, such as checking levels with a measuring rod or pole, performing drawdown tests on wells to check flow rates, performing laboratory tests on samples, etc.
- i. Create temporary test conditions to simulate variations in process operation by throttling valves, controlling pump speed, shutting down process equipment, operating safety devices, etc. Where safety concerns or process limitations prohibit physical simulation and when agreed to by the Owner, simulated process signals may be used. Test conditions shall be sufficient to test the operation of every function of the instrumentation and control system including:
 - 1) Alarms and safety shutdowns.
 - 2) Equipment start/stop and speed controls.
 - 3) Pacing of chemical feed equipment.
 - 4) Recorders and indicators.
 - 5) Process controller operation and recovery from upsets.
 - 6) Programmable logic controller (PLC) or Supervisory Control and Data Acquisition (SCADA) system inputs and outputs.
 - 7) PLC or SCADA system programming.
- j. The test shall be performed according to the test procedures submitted. As each phase of the test is completed, test data sheets shall be signed and dated. The test data sheets shall document any modifications to the control and alarm settings, process engineering unit changes, programming changes, wiring changes, problems encountered, and steps taken to solve the problems.
- k. The commissioning effort shall be documented using forms similar to the sample Loop Validation/Inspection Tests form at the end of this Section.

3.5 CLEANING

- A. Instrumentation System: The instrumentation system components shall be kept clean and free of dust during the storage, start-up, demonstration, and warranty period.
- B. Control Panels and Consoles: Clean dust and dirt accumulation inside and outside control panels and consoles, on a monthly basis, during start-up and demonstration period.

3.6 DEMONSTRATION

- A. General: The Contractor shall perform a 30-day operational demonstration of the complete instrumentation and control system. The demonstration shall conform to the following requirements. The 30-day operational demonstration shall not begin until the field test is completed and all problems and defects encountered during the field test have been corrected.

- B. System Acceptance: System acceptance shall not occur until the entire instrumentation and control system has performed as a functioning unit continuously for 30 consecutive days without loss of control and monitoring function, except for periods of scheduled maintenance. Failure of any component, software function, or required function shall require a restart of the 30-day operational demonstration until 30 consecutive days of continuous operation have been completed.
- C. Staffing: Provide for the services of a qualified service technician for the duration of the 30-day demonstration. The service technician shall be on call 24 hours per day, 7 days a week.

3.7 PROTECTION

- A. The Contractor shall protect the instrumentation system components from water, dust, dirt, and corrosion during the start-up, demonstration, and warranty period.

3.8 INSTRUCTION OF PERSONNEL

- A. Field Training: Training shall be conducted on all I&C equipment provided under the 40 9XXX series Sections, and related electrical and interfaces to equipment provided by other division sections. Training sessions shall be conducted as follows:
 1. Provide 40 hours of training by factory-authorized representative of equipment to Owner's personnel.
 2. Training courses shall include hardware components emphasizing operation, calibration, maintenance, interface with other systems, and associated theory.
 3. Minimum Goals: Training shall incorporate operational requirements described in these specifications. Training shall provide the plant operations personnel with the following:
 - a. Control set point and dead band modifications.
 - b. Control system start-up and shutdown.
 - c. Routine diagnostic checks and maintenance.
 - d. Field instrument calibration and maintenance.
 - e. Equipment diagnostic testing and replacement of failed parts.
 4. The process control system integrator shall submit a training program that provides the plant operations personnel a theoretical background and a broad range of related skills to achieve the listed goals. The instructor(s) shall be experienced in system applications similar to the equipment specified herein. The resumes of the training staff for instructing the plant operations personnel shall be available for review by the Owner. The plant operations personnel trainees shall be subjected to program testing, evaluation, and counseling. Study assignments shall be made and later reviewed by the instructors to the satisfaction of class attendees. Trainees shall be encouraged to freely ask questions during the instruction periods.
 5. The Contractor shall provide all classroom training courses and all hands-on training at the project site. Contractor shall provide tables, chairs, and all training documentation for training attendees.
 6. Provide text material for self-study and to supplement classroom lectures. The personnel attending the training courses shall be permitted to retain text materials for future reference.
- B. The Contractor shall develop a training program tailored to the Owner's needs including type and quantity of treatment plant personnel, a curriculum of described courses, duration of courses, and training facilities. The Contractor shall submit for approval a detailed outline of the proposed training schedule, how the training courses are to be conducted, and estimated

dates for beginning and end of each training phase. The Contractor shall be responsible for the cost of the training program. The Owner shall be responsible for the trainee salaries and overhead costs.

- C. Calibration Certificate Forms: See following forms.

END OF SECTION 40 9000

SECTION 40 9100

PRIMARY SENSORS AND FIELD INSTRUMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Scope:

1. Contractor shall furnish, install, calibrate, test, adjust, and place into operation the primary sensors and field instruments as shown on the Drawings and specified herein to the satisfaction of Owner.
2. The Drawings and Specifications illustrate and specify functional and general construction requirements of the sensors and field instruments and do not necessarily show or specify all components, wiring, piping, and accessories required to make a completely integrated system. Contractor shall provide all components, piping, wiring, accessories, and labor required for a complete, workable, and integrated system.
3. Contractor shall be responsible for installing in-line pressure and flow elements and for providing taps in the process piping systems for installation of other flow and pressure sensing instrumentation.

B. Coordination: Coordinate with other suppliers for installation of all items specified herein and required to ensure the complete and proper interfacing of all the components and systems.

C. Related Sections:

1. Section 40 9513, Control Panels

1.3 SUBMITTALS

- A. Comply with Section 40 9000, Instrumentation and Control System General Requirements

PART 2 - PRODUCTS

2.1 IDENTIFICATION TAGS

- A. Type: White engraved phenolic
- B. Function: Identify specific characteristics of all sensors and field instruments. All instruments, whether field or panel mounted, shall have an identification tag.
- C. Performance Requirements:
 - 1. Tag numbers of sensors and field instruments shall be as shown on the drawings and as specified. For items not shown or specifically tagged, the item tag number shall be established by the system supplier.
 - 2. Information to be permanently engraved onto the tag shall include the identifying tag number, manufacturer, model number, service, and range.
 - 3. The tags shall be fastened to the device with self-tapping stainless steel screws. Where fastening with screws cannot be accomplished secure with 1/8 inch stranded stainless steel wire rope and secured with a crimp sleeve. Provide hole in end of tag for attachment of wire.
 - 4. All sensors and field instruments mounted on or within control panels and enclosures shall have the identification tag installed so that the engravings are easily visible to service personnel. Panel mounted devices shall have the tag attached to the rear of the device.
- D. Construction Features:
 - 1. Tags shall be engraved with 3/16-inch letters and constructed as follows:
 - a. 1/8- inch thick laminated phenolic for engraving composed of core laminated on both sides with a matte (non-glare) finish cover sheet
 - b. Core to be black; cover sheet to be white
 - c. Mounting holes to be centered on width and 1/4 inch from each end

2.2 LEVEL INSTRUMENTATION

- A. RADAR LEVEL METER
 - 1. Type: Non-contact system using a microwave transmitter/receiver, a horn or rod antenna and a microprocessor-based signal processor. Frequency modulated continuous wave of electromagnetic energy is transmitted through the antenna towards the surface of the material to be measured and energy is reflected back in the form of echoes. The transit time of the reflected radar signal is measured and evaluated in the signal processor. The level (or volume) of the material is read out in engineering units.
 - 2. System Performance Requirements:
 - a. Accuracy:
 - 1) Less than 32 feet: +/- 0.6 inches or better
 - 2) Greater than 32 feet: +/- 0.3 percent of span or better
 - b. Maximum range: 65 feet
 - c. Repeatability: +/- 0.1% or better
 - d. Frequency: 25 GHz
 - e. Modulation: Frequency Modulated Continuous Waveform (FMCW)
 - f. Power Requirements: 24 VDC loop power
 - g. Transmitter analog output: 4 to 20 mA, 750 ohm maximum load
 - h. Transmitter digital output protocol: HART

- i. Ambient Temperature: +15 to 25°C
- 3. Required Features:
 - a. Antenna:
 - 1) Mountings: Flange mounting
 - 2) Rod Antenna Material: PTFE
 - 3) Flange and mounting hardware material: Type 316 stainless steel
 - 4) Maximum transmitter power: 30 microwatts
 - b. Transmitter/Processor:
 - 1) Enclosure: Copper-free Aluminum, epoxy coated, NEMA 6, IP67
 - 2) Operator Control: Illuminated LCD. Programming by keypad or non-invasive programming using handheld programmer or magnetized probe
 - 3) Memory: non-volatile ROM/EEPROM
 - c. Accessories:
 - 1) Handheld programmer
- 4. Manufacturer and Model:
 - a. Series SITRANS LR250 as manufactured by Siemens
 - b. Or approved equal

B. LIQUID POINT-LEVEL SWITCH

- 1. Function: To sense specific level for a process fluid by means on RF admittance technology. An output relay is actuated when the sensing element comes in contact with the process fluid.
- 2. Features:
 - a. Field selectable for low or high level detection.
 - b. Sensing element material: Suitable for the process liquid.
 - c. Mounting: ¾" NPT for mating to non-metallic flange.
 - d. NEMA 4X/IP66 Housing
 - e. Area classification: General purpose
- 3. Electrical Characteristics:
 - a. Electronics mounted integral to sensor
 - b. Single DPDT relay contacts rated at 5A @ 120VAC
 - c. Relay time delay adjustable up to 60 seconds response time
 - d. Input Power: 19-250VAC, 18-200VDC, auto sensing
- 4. Manufacturer and Model:
 - a. Model ThePoint as manufactured by AMETEK Drexelbrook
 - b. Or approved equal

C. FLOAT SWITCH

- 1. Type: Direct acting, pear shaped, eccentric weighted, displacement type liquid level sensor
- 2. Construction Features:
 - a. Float Body: Hollow hermetically sealed, rigidly molded of polypropylene containing mechanical switch and eccentric metal weight
 - b. Mechanical Switch: SPDT switch rated 10 A resistive at 120 VAC and 5 A resistive at 30 VDC
 - c. Weight: Weight to cause sensor to hang straight down from cable when not immersed and only allow float to pivot when immersed in liquid of specific gravity 1.0. External weights or floats that completely rise to the surface will not be permitted.
 - d. Electrical Cable:

- 1) Heavy duty, 3 conductor, flexible and submersible cable, sheathed in PVC or chlorinated polyethylene rubber and connected to float and switch with watertight seal
- 2) Manufacturer's continuous length cable furnished shall be of sufficient length to extend to junction box.
3. Manufacturer and Model:
 - a. Model ENM-10 as manufactured by ITT Flygt
 - b. Or approved equal

D. WET FLOOR DETECTION SWITCH

1. Type: A direct acting float that moves up and down a stationary stem or rod surrounded by a permeable shield for protection and to minimize sloshing. The float shall rise or lower with liquid level and activate a magnetic switch within the stem or rod.
2. Features:
 - a. Float body: 316 Buna N with magnet in float for actuating switch in rod. Float shall rise when immersed in water.
 - b. Mechanical switch inside of rod: Hermetically sealed reed switch
 - c. Rod material: Type 316 stainless steel
 - d. Slosh and Protection Shield: Polycarbonate Plastic
3. Manufacturer and Model:
 - a. LS-270 Series as manufactured by Gems Sensors
 - b. Or approved equal

E. WET FLOOR DETECTION SWITCH (CHEMICAL AREAS)

1. Function: To detect wet floors in the chemical containment areas.
2. Type: A direct acting float that moves up and down a stationary stem or rod. The float shall rise or lower with liquid level and activate a magnetic switch within the stem or rod.
3. All wetted components shall be fully compatible for continuous immersion in chemical solutions.
4. Features:
 - a. Float body: CPVC with magnet in float for actuating switch in rod. Float rises when immersed in water.
 - b. Mechanical switch inside of rod: Hermetically sealed reed switch.
 - c. Rod material: CPVC
 - d. Mounting Bracket: Provide a wall mount bracket constructed of chemically-compatible material. Bracket shall position detector as close to floor as possible and allow full adjustment of detector position.
5. Manufacturer and Model:
 - a. LS-74780 Series as manufactured by Gems Sensors.
 - b. Or approved equal

F. SUBMERSIBLE LEVEL TRANSMITTER

1. Type: Submersible piezoresistive element measuring the level with reference to atmospheric pressure.
2. Performance Requirements:
 - a. Accuracy: +/- 0.25% full scale
 - b. Range: See Schedule
 - c. Power: 12-30VDC loop power
 - d. Transmitter Output: 4-20mADC, 2-wire loop powered
 - e. Temperature Range: 0-180°F
 - f. Pressure Limit: 2x full scale

3. Required Features:
 - a. Mounting: As shown on the drawings.
 - b. Housing: 316SS with 1/2" NPT and ETFE Cable
 - c. Electrical Protection: Lightning and Surge protection
4. Manufacturer and Model:
 - a. Model PBLT2 by Dwyer Instruments
 - b. Or approved equal

2.3 FLOW INSTRUMENTATION

A. MAGNETIC FLOWMETER

1. General:
 - a. Flowtube: Produce low level, high impedance pulsed DC signal proportional to the rate of fluid flow using the principle of electromagnetic induction.
 - b. Pulsed DC Magnetic Flow Transmitter: Drive the flowtube coils with pulsed DC power and convert the flowtube output signal into a DC current output proportional to the flow rate.
2. System (Flowtube and Transmitter) Performance Requirements:
 - a. Flow Range: As specified in the Instrument Schedule
 - b. System Accuracy (with Analog Output): +/- 0.55% of flow rate or better over range from 2 fps to 33 fps
 - c. System Repeatability: +/- 0.15% of flow rate or +/- 0.15 fps, whichever is greater
 - d. Drift: Complete 0 stability
 - e. Minimum Fluid Conductivity Limit: 5 micromho per centimeter or less
 - f. Transmitter Outputs:
 - 1) 4 to 20 mA, direct acting and isolated
 - 2) High accuracy, field adjustable scaled pulse output to drive local totalizer
 - g. Power Consumption: Not to exceed 20 VA for flowtube and transmitter combined
 - h. Operating Temperature: Suitable for operation with process fluid temperature from -23 to 140°F
 - i. Pressure Rating: Greater than or equal to test pressure specified in Section 40 0513, Exposed Piping Installation, for appropriate piping system
3. Construction and Required Features:
 - a. Flowtube:
 - 1) Type: Lined metal flowtubes
 - 2) Size: As specified in the Instrument Schedule
 - 3) Interchangeability: Ratio of flow velocity to voltage reference signals generated shall be identical for all meter sizes to permit interchangeability with transmitter without requiring circuit modifications.
 - 4) System accuracy specified above shall be proven by submittal of flow test curves of the actual meters being furnished.
 - 5) Test curves shall show a minimum of 8 equally spaced flow points. Tests shall be performed using water and a weight or volume tank, or reference meters that are traceable and calibrated to NAMAS or NIST standards.
 - 6) Tube Material:
 - a) Meter tubes 12 inches and smaller: Type 304 stainless steel
 - b) Metering tubes 14 inches and larger: Type 304 stainless steel, 0.125-inch wall thickness or greater
 - 7) Electrodes Material: Type 316 stainless steel, unless otherwise specified in the Instrument Schedule

- 8) Lining: Teflon®, Elastomer, Neoprene, or polyurethane unless otherwise specified in the Instrument Schedule
- 9) Enclosure:
 - a) Materials and Rating: Stainless steel, polyurethane coated sheet steel, or cast low-copper aluminum alloy NEMA 6P, submersible to 33 feet
 - b) Finish: Finish exterior, except for flange faces, with a high build epoxy paint
- 10) End Connections: ANSI Class 150 pounds flange suitable for mating with pipe specified
- 11) Electrical Connections: 1/2-inch NPT tapped holes for power conduit fitting and signal conduit fittings
- b. Pulsed DC Magnetic Flow Transmitter:
 - 1) Solid state construction
 - 2) Pulse and analog output with superimposed HART communication protocol. Outputs shall be galvanically isolated from input and earth ground
 - 3) Automatic zeroing feature making it unnecessary to zero the instrument before or after placing it in operation
 - 4) Precalibrated span adjustment providing continuous span adjustment over entire range
 - 5) Enclosure:
 - a) NEMA 4
 - b) Finish: Epoxy coating
 - 6) Mounting:
 - a) All transmitter and driver electronics shall be remotely mounted from the flow tubes at locations shown on the Drawings.
 - b) Provide complete stainless-steel mounting hardware
 - c) Type of mounting (wall, support frame or pipe stand) as required
 - 7) Local Indication:
 - a) 8-character minimum LCD with field selectable engineering units
 - 8) Power Requirements: 115 VAC +/- 10%, 60 Hz, +/- 3 Hz power supply
- c. Accessories:
 - 1) Manufacturer's recommended cables of sufficient length for connection between flowtube and transmitter electronics
 - 2) Type 316 stainless steel grounding rings for flowtubes
 - 3) Type 316 stainless steel grounding straps
 - 4) Provide a NEMA 4X rated 120 VAC power on-off switch.
 - 5) Provide spool piece for replacement of each different size flow tube where no bypass piping is provided.
 - 6) Provide 1 calibrator suitable to calibrate all flow tubes provided.
4. Manufacturer and Model:
 - a. Sitrans Series 5100 flow tube and 5000 Series transmitter as manufactured by Siemens
 - b. Or approved equal

B. CLAMP-ON FLOWMETER

1. General
 - a. The meter shall be a clamp-on design which mounts externally to the pipe and with no liquid contact.
 - b. The meter shall utilize the transit-time measurement technique and employ the use of two microprocessors.

- c. The meter shall also employ an alternate Doppler measurement technique for liquids with high solid content. The meter shall automatically toggle from transit time to Doppler measurement if the signal decays due to high solids content and toggle back once the signal improves. The time delay for the toggle feature shall be programmable.
 - d. Transducers shall be supplied with multi-point wet flow calibration certificate and shall have an accuracy of +/- 1%.
2. Transducer Features
- a. Transducers shall have built-in RTD for measuring the transducer block temperature and automatically compensating for temperature effects including changes in fluid viscosity and density.
 - b. Transducers shall be encased in stainless steel with an integral armored stainless steel jacketed TRIAX cable. The use of COAX and BNC cable is not acceptable.
 - c. Transducers shall be mounted in a full sealed stainless steel mounting track and have the ability to be coupled using permanent coupling pads. Use of grease is not acceptable.
 - d. Transducer markings shall be laser scribed and solvent resistant. Use of adhesive labels is not acceptable.
3. Meter features
- a. The meter shall have the ability to automatically recognize the transducers when they are connected.
 - b. The meter shall not require a “zero calibration” in the field. The zero calibration shall be factory pre-set and certified prior to shipment.
 - c. The meter shall have the ability to automatically calculate the Reynolds number and corresponding flow regime (laminar, turbulent, and transitional).
 - d. The meter shall provide automatic liquid sonic velocity compensation, and have built in liquid tables for liquid viscosity and density settings.
 - e. The meter electronics shall be housed in a NEMA4X enclosure and shall display flow rate, flow velocity, mass flow, total flow, signal strength, signal quality, liquid sonic velocity, and the flow regime.
 - f. The meter shall be capable of outputting multiple 4-20ma signals, voltage 0-1 V or 0-10 V high precision frequency 0-1 kHz or 0-10 kHz galvanically isolated, RS-232, RS-484, binary output pulse of alarm for relay total and meter status.
 - g. The meter shall have the ability to status alarm for conditions of fault, flow direction, sound velocity limit, and flow velocity limit.
 - h. The meter shall have the ability to set the 4-20 ma signal to a settable status and alarm condition.
 - i. The meter shall have RS-232 output and internal memory with a minimum storage of 100,000 data points.
4. Accessories
- a. Provide all necessary straps and anchors to affix the transducers to the pipe and meter to the wall.
 - b. Provide all necessary cables for connection between the transducers and the meter.
5. Sizes and Ratings
- a. System Accuracy: ± 1.0 percent of rate from 0 to 100 percent of range.
 - b. Meter shall read within the prescribed accuracy with fluid velocities from 0.01 feet per second to 57 feet per second.
 - c. Drift: Complete zero stability.
 - d. Process Fluid Temperature: 40 to 120 deg F
6. Warranty

- a. Strap on flowmeter shall include a minimum 1 year factory warranty. Field service shall be included at no additional cost during the warranty period.
- 7. Manufacturer: Subject to compliance with the requirements of this specification, available manufacturers of clamp-on flow meters include, but are not limited to, the following:
 - a. Flexim 7407
 - b. Or approved equal

C. CHEMICAL FLOWMETER

- 1. Provide flow sensors to assure that chemical is being delivered. Sensors shall be installed at the point of injection and shall operate from 50% to 150% of the typical service flow as show in the flow meter schedule.
- 2. Materials of Construction
 - a. Body: 316 SST
 - b. Pistons: Carbon
 - c. Bearing: Rulon
 - d. O-rings: Teflon
- 3. Minimum Accuracy:
 - a. +/- 5% at flowrates of 7 to 29 mL/min
 - b. +/- 10% at flowrate of 3 to 90 mL/min
- 4. Manufacturer:
 - a. Max Machinery, Model 234, with 4-20 mA output

2.4 PRESSURE INSTRUMENTATION

A. DIGITAL PRESSURE TRANSMITTER/SWITCH

- 1. Type: Gauge pressure.
- 2. Function: Provide analog output signal directly proportional to sensed pressure.
- 3. Performance Specifications:
 - a. Adjustable Range: See Instrument Schedule
 - b. Number of Switches and Setpoints: One.
 - c. Setpoint Accuracy: 0.5% of full range span.
 - d. Power Supply: 10-36Vdc loop-power.
 - e. Outputs:
 - 1) Analog: 4-20mA_{dc} isolated.
 - 2) Discrete: SPST rated for 300mA @ 120VAC
- 4. Required Features:
 - a. Repeatability: 0.1% of full range span.
 - b. Programmable response time delay: 2 seconds minimum.
 - c. Programmable for automatic or manual reset.
 - d. Field adjustable setpoint over full range by means of external touchpad.
 - e. Display: 0.5" 4-digit (minimum), LCD.
 - f. Screw type terminals.
 - g. ½" NPT female process connection.
 - h. ½" NPT female electrical connection.
 - i. Pressure sensor element shall be 316SS.
 - j. NEMA 4X epoxy-coated aluminum enclosure.
 - k. Programming and data shall be protected by non-volatile EEPROM.
- 5. Manufacturers:
 - a. United Electric Controls, One Series.
 - b. Or approved equal

B. PRESSURE TAPS, SENSING LINES, AND ACCESSORIES

1. Water Pressure Sensing Lines and Accessories for Flow and Pressure Transmitters:
 - a. Material: Copper Water Tube, ASTM B88, Type L, drawn temper or annealed
 - b. Pressure Rating: 150 psi
 - c. Size: 1/2-inch outer diameter for water
 - d. Connections: Brass Compression Type, "Swagelok" by Crawford, or approved equal
 - e. Shut-off Valves:
 - 1) Type: Ball
 - 2) Pressure Rating: 150 psi
 - 3) Body, Ball and Stem: Brass
 - 4) Packing: High Density TFE
 - 5) Handle: Nylon with metal travel stops
 - 6) Support Rings: TFE coated brass
 - 7) End Connections: Removable "Swageloks"
 - 8) Model: Whitey Series 40 for water, or approved equal
 - f. Manifolds:
 - 1) Type: 5-valve and 3-valve meter manifolds
 - 2) Materials: 316 SS Body, Bonnets and Stems; Delrin seats; Teflon Packing
 - 3) Manufacturer: Anderson-Greenwood, or approved equal
2. Air Pressure Sensing Lines and Accessories for Air Flow/Pressure Transmitters:
 - a. Material: Type 316 Stainless Steel Tubing, ASTM A269, Medium Wall Thickness
 - b. Pressure Rating: 150 psi
 - c. Size: 3/8-inch outer diameter for air
 - d. Connections: 316 Stainless Steel Compression Type, "Swagelok" by Crawford, or approved equal
 - e. Shut-off Valves:
 - 1) Type: Ball
 - 2) Pressure Rating: 150 psi
 - 3) Body, Ball and Stem: Type 316 Stainless Steel
 - 4) Packing: High Density TFE
 - 5) Handle: Nylon with metal travel stops
 - 6) Support Rings: TFE coated Type 316 stainless steel
 - 7) End Connections: Removable "Swageloks"
 - 8) Model: Whitey Series 40 for air, or approved equal
3. Manifolds:
 - a. Type: 5-valve and 3-valve meter manifolds
 - b. Materials: Type 316 stainless steel Body, Bonnets and Stems; Delrin seats; Teflon Packing
 - c. Manufacturer: Anderson-Greenwood, or approved equal
4. Pressure Tap Sensing Lines and Accessories for Pressure Switches and Pressure Gauges:
 - a. For Process Sensing Taps in Ductile Iron, Steel and Stainless Steel Piping Systems:
 - 1) Material and Fittings: Type 304L Stainless Steel Pipe (ASTM A312) and threaded fittings and adapters (ASTM A403) in accordance with Section 40 0513, Process Piping.
 - 2) Sizes: 1/2 inch minimum for main sensing piping and 1/4-inch gauge and switch connections
 - 3) Pressure Rating: Equal to or greater than the applicable system test pressure as specified in the Schedule in Section 40 0513, Process Piping.
 - 4) Accessories:

- a) For applications not requiring diaphragm seals, provide separate 1/2-inch stainless steel threaded ball valve for each gauge and switch.
 - b) For applications requiring diaphragm seals, provide separate 1/2-inch threaded stainless-steel ball valve for seal process side shutoff. Ball valves shall be provided in accordance with the specifications in Section 40 0523, Process Valves, Gates, and Accessories.
- b. For Process Sensing Taps in Copper and Thermoplastic Piping Systems:
- 1) Pipe Material and Fittings: Use same type of pipe material and fittings as that used in the process piping system. PVC pipe and fittings shall be provided in accordance with the requirements of Section 40 0513, Process Piping.
 - 2) Sizes: 1/2 inch minimum for main process sensing piping and 1/4 inch for gauge and switch connections
 - 3) Pressure Rating: Equal to or greater than the applicable system test pressure as specified in Section 40 0513, Process Piping.
 - 4) Accessories:
 - a) For copper piping system taps with or without seals, provide a separate 1/2-inch minimum threaded brass or bronze ball valve for each gauge and switch.
 - b) For PVC piping systems with or without diaphragm seals, provide a separate 1/2-inch threaded PVC ball valve for process sensing line shutoff. Ball valves shall be provided in accordance with the specifications in Section 40 0523, Process Valves, Gates, and Accessories.

C. DIAPHRAGM SEAL

- 1. General: Furnish diaphragm seals for pressure gauges and switches at locations shown and as specified.
- 2. Required Features:
 - a. Provide fill/bleed screw to permit filling of instrument and diaphragm seal
 - b. Instrument Connection: 1/4-inch NPT
 - c. Process Connection: 1/2-inch NPT
 - d. Working Pressure Rating: Equal to or greater than the attached gauge or switch operating pressure specified in Exposed Piping Schedule in Section 40 0513, Process Piping, whichever is greater
 - e. Bolting Materials: Type 316 stainless steel
 - f. Provide a clean-out ring which holds the diaphragm captive in the upper housing to allow the upper housing assembly to be removed for recalibration or cleaning of the process side housing without the loss of filling liquid or change in calibration.
- 3. Construction Features:
 - a. Top Housing: Type 316 stainless steel
 - b. Diaphragms, O-rings and Gaskets:

Process Fluid	Diaphragm	O-Ring	Gasket
Chlorine Gas	Teflon	Teflon	Teflon
Chlorine Solution	Teflon	Teflon	Teflon
Alum	Teflon	Teflon	Teflon
Lime	316 SS	Teflon	Teflon
Sodium Hypochlorite	Teflon	Teflon	Teflon
Sludge	316 SS	Buna-N	Buna-S

- c. Process Side Housing Material: 316 stainless steel for metallic piping; PVC or CPVC to match non-metallic piping
 - d. Sensing Liquid: Use silicone except for process fluids containing chlorine. When the process fluid contains chlorine, the filling liquid shall be Halocarbon 63 or Fluorolube 63.
4. Assembly and Calibration:
- a. The complete diaphragm seal assembly, including gauge, switch or transmitter, shall be factory assembled, filled and calibrated to the ranges and switch setpoints specified prior to shipment.
 - b. CONTRACTOR shall be responsible for assuring that fill volumes and sensitivities of the supplied seals and diaphragms are suitable to provide the required gauge, switch or transmitter accuracy over the specified measurement range or at switch setpoints.
 - c. Location and orientation of the gauges, switches and seal assemblies shall be coordinated with the actual piping and equipment installations so that gauges and indicators shall be easily read and accessed for maintenance by plant personnel.
5. Manufacturer and Model:
- a. Type 101 as manufactured by Ashcroft
 - b. Or approved equal

2.5 TEMPERATURE INSTRUMENTATION

A. DIGITAL TEMPERATURE TRANSMITTER

1. Function: Provide analog output signal directly proportional to sensed temperature.
2. Performance Specifications:
 - a. Adjustable Range: See Instrument Schedule
 - b. Number of Switches and Setpoints: One.
 - c. Setpoint Accuracy: 0.5% of full range span.
 - d. Power Supply: 10-36Vdc loop-power.
 - e. Outputs:
 - 1) Analog: 4-20mA_{dc} isolated.
 - 2) Discrete: SPST solid state rated for 600mA @ 120VAC
3. Required Features:
 - a. Repeatability: 0.1% of full range span.
 - b. Programmable response time delay: 2 seconds minimum.
 - c. Programmable for automatic or manual reset.
 - d. Field adjustable setpoint over full range by means of external touchpad.
 - e. Display: 0.5" 4-digit (minimum), LCD.
 - f. Screw type terminals.
 - g. ½" NPT female process connection.
 - h. ½" NPT female electrical connection.
 - i. Temperature sensor element shall be 316SS.
 - j. NEMA 4X epoxy-coated aluminum enclosure.
 - k. Programming and data shall be protected by non-volatile EEPROM.
4. Sensor: Provide local sensor unless shown otherwise on the Drawings.
5. Manufacturers:
 - a. United Electric Controls, One Series.
 - b. Or approved equal

2.6 ANALYTICAL INSTRUMENTATION

A. RESIDUAL CHLORINE ANALYZER

1. Description: Amperometric chlorine probe for reagentless free chlorine measurement.
2. Analyzer
 - a. Number of Sensors: Up to four (4)
 - b. Number of Analog Outputs: Up to four (4)
 - c. Display: 4" minimum, color.
 - d. Power: 120V
 - e. Output: 4-20 mA
 - f. Enclosure: NEMA 4X FRP
 - g. Maximum Dimensions: 11" x 13" x 6" (W x H x D)
 - h. Note: Where possible combine multiple sensors/probes on a single analyzer/transmitter.
3. Probe
 - a. Type: Membrane-covered amperometric three-electrode system
 - b. Measured: Free residual chlorine
 - c. Probe range: 0.05 -5 mg/L
 - d. Resolution: 0.01 mg/L
 - e. Reproduction: $\pm 5\%$
 - f. Stability: -1% per month (without calibration)
 - g. Working electrode: Gold catholde
 - h. Counter electrode: SST anode
 - i. Reference electrode: silver/silver halide
 - j. Temperature range: 41 to 113 degrees F
 - k. pH Range: 4-9 s.u.
 - l. First polarization time: 120 minutes
 - m. Re-polarization time: 30 minutes
 - n. Calibration: Manual using DPD
 - o. Housing Material: PVC
4. Accessories:
 - a. Flow cell: Provide a polycarbonate flow cell and backplate. Provide dual flow cell in instances where two probes are required. Mount using 304 SST hardware.
5. Spare Parts:
 - a. Two (2) membrane caps per chlorine sensor.
6. Product and Manufacturer:
 - a. Chemtrac HydroACT HA4 analyzer, CP4 probe.
 - b. Foxcraft FX-CL-F analyzer, 301254X probe.

B. pH/OXIDATION REDUCTION POTENTIAL (ORP) ANALYZERS

1. Description: Three electrode (process, reference, and ground) differential pH/ORP probe and a microprocessor-based analyzer/transmitter designed to measure pH/ORP of the sample and produce a proportional output signal linear to the pH/ORP.
2. Analyzer
 - a. Number of Sensors: 4
 - b. Number of Analog Outputs: 4
 - c. Display: 4" minimum, color.
 - d. Power: 120V
 - e. Output: 4-20 mA
 - f. Enclosure: NEMA 4X
 - g. Maximum Dimensions: 11" x 13" x 6" (W x H x D)
 - h. Note: Where possible combine multiple sensors/probes on a single analyzer/transmitter.

3. pH Probe
 - a. Type: W-type rod membrane, pH electrode
 - b. Measured: pH
 - c. Probe range: 0 – 14 s.u.
 - d. Slope: 95 – 102%
 - e. Stability: < -0.01 s.u. per hour (without calibration)
 - f. Reproducibility: < 0.01 s.u
 - g. Working electrode: Gold cathode
 - h. Counter electrode: SST anode
 - i. Reference electrode: silver/silver halide
 - j. Temperature range: 41 to 113 degrees F
 - k. pH Range: 4-9 s.u.
 - l. First polarization time: 120 minutes
 - m. Re-polarization time: 30 minutes
 - n. Calibration: Manual using DPD
 - o. Housing Material: PVC
4. Accessories:
 - a. Flow cell: Provide a polycarbonate flow cell and backplate. Provide dual flow cell in instances where two probes are required. Mount using 304 SST hardware.
5. Materials
 - a. Sensor
 - 1) Body and salt bridge: PEEK.
 - 2) Junction: Kynar.
 - 3) Process electrode: Glass (pH), glass and platinum (ORP).
 - 4) Ground electrode: Titanium.
 - 5) O-ring seals: Viton.
 - b. Analyzer/Transmitter Enclosure: NEMA 4X.
 - c. Insertion Mounting Assembly: Stainless steel, type 316.
6. Ratings and Performance
 - a. Sensor
 - 1) Range: 0 to 14 pH; -1500 to +1500 mV ORP.
 - 2) Sensitivity: +/- 0.01 pH; +/- 0.5 mV ORP.
 - 3) Stability: 0.03 pH; 2mV ORP per 24 hours, non cumulative.
 - 4) Operating temperature: 23 to 158 degrees F.
 - 5) Maximum pressure: 100 psi at 158 degrees.
 - 6) Maximum flow rate: 10 fps.
 - b. Analyzer/Transmitter
 - 1) Repeatability: 0.05% of span.
 - 2) Stability: 0.05% of span for 24 hours, non-cumulative.
 - 3) Analog outputs: 4 to 20 mA isolated.
 - 4) Ambient temperature range: -4 to 104 deg F.
 - 5) Relative humidity: 0 to 95% non-condensing.
 - 6) Input power: 120 V a. c., 35W maximum.
 - 7) Output contacts: 120 V a. c., 5 Amp resistive maximum.
 - 8) Analog outputs: 500 Ohms maximum impedance.
7. Product and Manufacturer
 - a. Hach pH Series pH/ORP sensor and sc200 analyzer/transmitter.
 - b. Rosemount 389VP sensor and 1056 analyzer/transmitter.

C. CONDUCTIVITY ANALYZERS

1. Description: Inductive conductivity sensor that induces a low current in a solution and measures the magnitude of the current to determine the conductivity.
2. Features
 - a. Sensor
 - 1) Non-contacting inductive sensor.
 - 2) Internal platinum RTD for temperature compensation.
 - 3) Insertion mounting.
 - 4) Nominal 1/2-inch bore diameter.
 - b. Analyzer/Transmitter
 - 1) Solid state, microprocessor-based.
 - 2) Non-volatile memory for all user settings.
 - 3) Capable of operating with up to two sensors.
 - 4) Two independent PID controllers.
 - 5) Plug and play operation, automatically detects sensor type.
 - 6) Built-in data logger, stores 6 months of data at 15-minute intervals with 2 sensors.
 - 7) Two analog outputs.
 - 8) Three SPDT alarm/control relays.
 - 9) LCD graphic display with LED backlighting.
3. Accessories
 - a. Digital gateway.
 - b. Extension cable.
 - c. Insertion mounting assembly with ball valve, 2 inch NPT.
4. Materials
 - a. Sensor Body: Teflon.
 - b. Analyzer/Transmitter Enclosure: NEMA 4X.
 - c. Insertion Mounting Assembly: Stainless steel, type 316.
5. Ratings and performance
 - a. Sensor
 - 1) Range: 0-200 up to 0-2,000,000 microSiemens/cm.
 - 2) Sensitivity: +/- 0.01 pH; +/- 0.5 mV ORP.
 - 3) Stability: 0.03 pH; 2mV ORP per 24 hours, non cumulative.
 - 4) Operating temperature: 14 to 392 deg F.
 - 5) Maximum pressure: 200 psi.
 - 6) Maximum flow rate: 10 fps.
 - b. Analyzer/Transmitter
 - 1) Repeatability: 0.05% of span.
 - 2) Stability: 0.05% of span for 24 hours, non-cumulative.
 - 3) Analog outputs: 4 to 20 mA isolated.
 - 4) Ambient temperature range: -4 to 104 deg F.
 - 5) Relative humidity: 0 to 95% non-condensing.
 - 6) Input power: 120 V a. c., 35W maximum.
 - 7) Output contacts: 120 V a. c., 5 Amp resistive maximum.
 - 8) Analog outputs: 500 Ohms maximum impedance.
6. Product and Manufacturer
 - a. Hach 3700 sensor and sc200 analyzer/transmitter.
 - b. Rosemount 400VP and 1056 analyzer/transmitter.

D. FLUORIDE ANALYZER

1. Description: Ion selective electrode to monitor fluoride ion concentration in potable water.

2. Analyzer
 - a. Number of Sensors: 1
 - b. Number of Analog Outputs: 1
 - c. Display: 3 digit red LED.
 - d. Power: 120V
 - e. Output: 4-20 mA
 - f. Enclosure: NEMA 4X Polycarbonate
 - g. Maximum Dimensions: 11" x 8" x 5" (W x H x D)
3. Probe
 - a. Type: Ion selective electrode (ISE)
 - b. Measured: Fluoride
 - c. Probe range: 0 - 10 mg/L
 - d. Resolution: 0.01 mg/L
 - e. Accuracy: $\pm 0.2\%$
 - f. Reference half cell: Silver/silver chloride, saturated KCl
 - g. Primary Junction: Porous ceramic, saturated KCl in cross linked polymer
 - h. Secondary Junction: Solid-state non-porous cross-linked conductive polymer embedded in HDPE/Kynar support matrix, excess saturated KCl salt system in cross linked polymer
 - i. Temperature range: 41 to 122 degrees F
 - j. pH Range: 5.5 - 9.5 s.u.
 - k. Calibration: Manual (1 point offset)
 - l. Material: Radel R-5000 NT
4. Accessories:
 - a. Flow cell: Provide a 12" x 24" x 1/2" (H x W x D) PVC panel for mounting with a 0-25 psi pressure reducer, 0 – 5 gph rotometer with SST valve, brass barbed connectors for 1/4" ID tubing, 1/2" SCH 80 PVC piping to keep sensor tip wet, 1" PVC pipe tee with twist lock sensor receptacle, and inlet and backpressure PVC ball valves.
5. Product and Manufacturer:
 - a. Foxcraft FX-300-F analyzer, SF-8T-UL probe.

E. PHOSPHATE ANALYZER

1. Description: Analyzer to monitor orthophosphate concentration in potable water.
2. Analyzer/Probe
 - a. Number of Sensors: 1
 - b. Number of Analog Outputs: 1
 - c. Power: 120V
 - d. Output: 4-20 mA
 - e. Serial Interface: RS-232
 - f. Enclosure: NEMA 4X FRP
 - g. Maximum Dimensions: 26" x 10" x 7" (H x W x D)
 - h. Measured: Orthophosphate (as PO₄ or as PO₄-P)
 - i. Probe range (as PO₄): 0.09 - 9 mg/L
 - j. Probe range (as PO₄-P): 0.03 - 3 mg/L
 - k. Cycle Time: 5 – 9999 minutes
 - l. Accuracy: $\pm 2\%$ or 2x detection limit
 - m. Temperature range: 41 to 131 degrees F
3. Accessories:

- a. Reagents: Provide a sufficient amount of VMO reagent suitable for 12 months of operation at a 5 minute sample cycle. Provide reagent line priming package, reagent and cleaning solution bottle with connection lines, and reagent rack.
- 4. Product and Manufacturer:
 - a. ChemScan mini oP

2.7 SCHEDULES

- A. Schedule: See attachment.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Items shall be inspected for damage upon delivery to the site.
- B. Damaged components shall not be installed.

3.2 INSTALLATION

- A. Contractor shall require the system supplier to furnish the services of qualified factory-trained servicemen to assist in the installation of the instrumentation and control system equipment.
- B. Install each item in accordance with manufacturer's recommendations in accordance with the Contract Documents. Transmitters and instruments which require access for periodic calibration or maintenance shall be mounted so they are accessible while standing on the floor. Care shall be taken in the installation to ensure sufficient space is provided between instruments and other equipment or piping to allow for easy removal and servicing.
- C. All items shall be mounted and anchored using stainless steel hardware unless otherwise noted.
- D. All field instruments shall be rigidly secured to walls, stands, or brackets as required by the manufacturer and as shown on the Contract Drawings.
- E. Conform to all applicable provisions of the NEMA standards, NEC, and local, State, and Federal codes when installing the equipment and interconnecting wiring.

END OF SECTION 40 9100

SECTION 40 9443

PLANT CONTROL SYSTEM (FAWTP)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specification sections, apply to this section.
- B. Related Sections: The following sections contain requirements that relate to this section.
 - 1. Division 26 Section “Basic Electrical Requirements”.
 - 2. Division 26 Section “Basic Electrical Materials”.
 - 3. Division 26 Section “Signal and Communication Cables”.
 - 4. Division 26 Section “Wires, Cables, and Connectors”.
 - 5. Division 40 Section “Instrumentation – General”.
 - 6. Division 40 Section “Control Panels”.

1.2 DESCRIPTION OF WORK

- A. General: Provide all labor, tools, equipment, and materials necessary for a complete and operational Plant Control System in accordance with the plans and as specified herein.
- B. Contractor shall furnish all labor, materials, and components, and shall provide all design, assembly, testing, and start-up services required to provide a complete and operational programmable controller system (referred to herein as PLC) as specified and shown on the Drawings. The system includes, but is not necessarily limited to the following:
 - 1. Processor modules.
 - 2. Communication equipment.
 - 3. Input/output (I/O) modules.
 - 4. Operator interface equipment.
 - 5. Mounting racks.
 - 6. Power supplies.
 - 7. Programming equipment.
 - 8. Software.

1.3 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with requirements of the National Electrical Code (NEC) and all other applicable federal, state, and local codes and regulatory requirements.
- B. Standards: Materials and workmanship shall conform to the following standards:
 - 1. National Electrical Manufacturers Association (NEMA).
 - 2. Institute of Electrical and Electronic Engineers (IEEE).
 - 3. American National Standards Institute (ANSI).
 - 4. National Fire Protection Association (NFPA).
 - 5. Underwriters' Laboratories (UL).
 - 6. International Society for Measurement and Control (ISA).

- C. Qualifications
 - 1. Manufacturer's Qualifications: Firms regularly engaged in the manufacture of programmable logic controllers (PLCs) whose products have been in satisfactory use in similar service for not less than 5 years.
 - 2. Installer's Qualifications: Firm with at least 5 years of successful installation experience on projects with materials and equipment similar to items specified herein.

1.4 SUBMITTALS

- A. General: Furnish manufacturer's product data for all components.
- B. Materials List: Submit a bill of materials listing quantities, manufacturer's name, and catalog numbers.
- C. Wiring Diagrams: Submit wiring diagrams showing all connections for all equipment furnished under this section. Wire, terminal, and component labeling shall follow established facility conventions where applicable.
- D. System Hardware and Software Documents: Furnish a system block diagram, I/O drawings, and control strategy descriptions. Turn over all factory software documentation and manuals to the Engineer after completion of field testing.
- E. Dimensional Drawings: Furnish dimensional drawings for each piece of equipment to be provided.
- F. Program Documentation: Submit annotated printouts of all PLC and Human Machine Interface (HMI) programs. Provide copies of all PLC and HMI programs on a flash drive.
- G. Manufacturer's Data Sheet: Provide manufacturer's data sheet on all equipment including model numbers, serial numbers, ranges, scales, and a detail of each component.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Storage and Protection: Store the items furnished under this section in a manner that meets the requirements of the manufacturer until they can be installed. Use all means necessary to protect the material of this section before, during, and after installation, and to protect the installed work and materials of all other trades.

1.6 DEFINITIONS

- A. Training Day: A training day is defined as 8 hours of classroom instruction, including two 15-minute breaks and excluding lunchtime, Monday through Friday.

1.7 SCADA ALLOWANCE

- A. The Contractor shall include in the bid an allowance for the purchase of computers, accessories, peripherals, and/or furniture for the Owner. These components shall be provided by the System Integrator. The Owner shall be able to select the computers, accessories, peripherals, and/or furniture during the shop drawing review process with technical input from the System Integrator.

PART 2 - PRODUCTS

2.1 SCADA SYSTEM

- A. Programmable Logic Controller (PLC) Components:
 - 1. Processor Rack:
 - a. Processor Module: 1769-L36ER
 - b. Digital Input Module: 1769-IA16, 1769-IA8I when isolation required
 - c. Digital Output Module: 1769-OA8
 - d. Analog Input Module: 1769-IF4I
 - e. Analog Output Module: 1769-OF4CI
 - f. Power Supply: 1769-PA4
 - g. DIN Rail mounted
 - 2. Remote I/O:
 - a. Communication Adapter: 1794-AENT
 - b. Digital Input Modules: 1794-IA16 with 1794-TB3 terminal base unit
 - c. Digital Output Modules: 1794-OA8I with 1794-TBNF terminal base unit
 - d. Analog Input: 1794-IF4I with 1794-TB3 terminal base unit
 - e. Analog Output: 1794-OF4I with 1794-TB3 terminal base unit
 - f. Provide fusing for field wiring per manufacturer's installation instructions.
 - g. DIN Rail mounted
 - 3. Manufacturers:
 - a. All components shall be manufactured by Allen-Bradley or an Encompass Partner.
- B. Operator Interface Terminal (OIT):
 - 1. Features:
 - a. Touch screen flat display
 - b. LED backlit LCD
 - c. 24-bit 16.7M colors
 - d. Size: 15" diagonal nominal, unless otherwise noted
 - e. Resolution: 1024x768, minimum
 - f. Communications: Ethernet/IP, USB
 - g. SD card slot
 - h. NEMA 12
 - i. Real-time battery backed clock
 - j. Memory: 1 GB RAM and 1 GB user storage
 - k. Input Power: 120VAC
 - 2. Manufacturers:
 - a. Allen-Bradley, PanelView 5510

PART 3 - EXECUTION

3.1 CUSTOM PROGRAMMING

- A. Custom Programming of all vendor provided control panels, including their PLCs and OITs, shall be provided by that vendor under the applicable specification section of the associated equipment.
 - 1. Provide database spreadsheets for peer-to-peer communication coordination between other onsite PLCs that need to share data.
 - 2. Provide database spreadsheets for Plant HMI/SCADA communication coordination.
 - 3. Provide annotated copies of all PLC programs.

4. Provide an electronic copy of all PLC and OIT programming files for the Owner on a flash drive. Format shall be as required to reload into PLC memory. Logic version shall be the final program after all equipment has been installed and commissioned and Operational Demonstration is complete and successful to the Owner's approval.
- B. Custom Programming of non-vendor provided control panels, including their PLCs and OITs, will be provided by the Owner.
 - C. Custom Programming of plant's existing HMI/SCADA will be provided by the Owner.
 - D. Graphic Screens
 1. Submit all graphic screens for Owner review and comment when sixty percent complete.
 2. Provide navigation controls on all screens to allow movement between screens.
 3. Conform to NFPA 79, Industrial Machinery on colors for indicators and controls.
 4. Conform to Owner standards for colors of process equipment and piping.
 5. Utilize industry standard symbols or graphically realistic drawings for process equipment.
 6. Provide a separate screen for each group of process equipment.
 7. At a minimum, provide the following screens:
 - a. Process Overview
 - b. Individual Control Graphic for each associated piece of equipment/device
 - c. Alarm Summary Screens
 - d. Equipment Runtimes Screen
 - e. Totalizers Screen
 - f. (10) Analog Signal Trending Screens – Owner Directed
 - E. Global Programmed Control Strategies
 1. Meet with Plant Personnel before start of programming
 - a. Determine time of day for resetting of daily flow totalizers.
 - b. Determine the status (turn off or maintain last state) of each piece of equipment that is controlled by the PLC in the event of a PLC failure.
 - c. Security Levels for all screens.
 2. Display all alarms at the OIT.
 3. Provide means to acknowledge all alarms at the OIT.
 4. Provide alarms for PLC failure and network failure.
 5. Totalize the number of starts for all process equipment and display on the OIT.
 6. All process setpoints displayed on OIT screens.
 7. All process setpoints adjustable from the OIT screens with correct security level.
 8. Perform a runtime calculation for all process equipment and display at the OIT.
 9. Display rate, total, and daily total for all flows at the OIT.

3.2 EXAMINATION

- A. Verification of Conditions: Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.
- B. Discrepancies: In the event any discrepancies are discovered, immediately notify the Owner's Representative in writing. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3.3 PREPARATION

- A. Protection
 - 1. All equipment and materials shall be packed at the factory to protect each item from damage during shipment and storage.
 - 2. Provide blocking and cushioning materials to prevent damage during shipment.
 - 3. Panel mounted instruments and equipment to be installed inside enclosures, panels, or consoles shall be mounted and assembled at the panel manufacturer's facility.

3.4 INSTALLATION

- A. General: Install equipment, as indicated, with manufacturer's written instructions and with recognized industry practices.

3.5 FIELD QUALITY CONTROL

- A. Inspection: Provide for services of a qualified representative of the manufacturer to inspect and approve installation.
- B. Tests: Upon completion of all inspections, and prior to acceptance, perform field tests outlined in Division 40 Section "Plant Instrumentation and Control System General Requirements".
- C. Operational Demonstration: After completion of the field test, perform a 30-day operational demonstration as specified in Division 40 Section "Plant Instrumentation and Control System General Requirements".

3.6 DEMONSTRATION

- A. General: When all required tests have been performed and prior to final acceptance, the Contractor shall perform a 30 day operational demonstration in accordance with the requirements of Division 40 Section "Plant Instrumentation and Control System General Requirements".

3.7 EXTRA MATERIALS

- A. Spare Parts: The Contractor shall provide uninstalled spare parts to the Owner to facilitate proper maintenance and minimize downtime of the PLC system.
- B. Quantity: Provide spares for each type of module listed below equal to 10 percent of the total of each type used in the system rounded up to the next whole number.
 - 1. Processor Modules
 - 2. Power Supply
 - 3. Digital Input Modules
 - 4. Digital Output Modules
 - 5. Analog Input Modules
 - 6. Analog Output Modules
 - 7. Analog Input/Analog Output Modules
 - 8. Flex I/O Modules
 - 9. Flex I/O Module Terminal Blocks
- C. Provide (6) OIT protective screen overlays.

- D. Replacements: Any spare part used during the start-up, demonstration, and warranty period shall be replaced by the Contractor at no cost.

3.8 PLC SYSTEM TRAINING

- A. General.
 - 1. Provide a training course customized for the control system hardware.
 - 2. Provide training on the operation and maintenance of the control system hardware.
 - 3. Provide training manuals for each attendee plus two additional manuals in archival preservation at the project site.
 - 4. Include the following in each manual.
 - a. An agenda
 - b. Defined objectives for each lesson.
 - 5. Provide all equipment, materials, and supplies used in the training.
 - 6. For guidance in planning the required instruction, assume that attendees will have a high school education or equivalent and basic electrical maintenance knowledge.
- B. Location, duration, and schedule.
 - 1. Teach the course at the project site.
 - 2. Provide one day of training for five personnel designated by the Owner.
 - 3. Conduct training after completion of the Contractor's field testing.

3.9 INPUT/OUTPUT SCHEDULE

- A. Abbreviations
 - 1. AI = Analog Input
 - 2. AO = Analog Output
 - 3. CPU = Processor
 - 4. DI = Digital Input
 - 5. DO = Digital Output
 - 6. RIO = Remote I/O Communications
- B. Installed spare inputs and outputs (I/O): In addition to the I/O listed below, provide a minimum of 10 percent installed.
 - 1. All SPARE I/O shall be wired to terminal blocks within the PLC enclosure.

END OF SECTION 40 9443

SECTION 40 9443

PLANT CONTROL SYSTEM (RARWTP)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specification sections, apply to this section.
- B. Related Sections: The following sections contain requirements that relate to this section.
 - 1. Division 26 Section “Basic Electrical Requirements”.
 - 2. Division 26 Section “Basic Electrical Materials”.
 - 3. Division 26 Section “Signal and Communication Cables”.
 - 4. Division 26 Section “Wires, Cables, and Connectors”.
 - 5. Division 40 Section “Instrumentation – General”.
 - 6. Division 40 Section “Control Panels”.

1.2 DESCRIPTION OF WORK

- A. General: Provide all labor, tools, equipment, and materials necessary for a complete and operational Plant Control System in accordance with the plans and as specified herein.
- B. Contractor shall furnish all labor, materials, and components, and shall provide all design, assembly, testing, and start-up services required to provide a complete and operational programmable controller system (referred to herein as PLC) as specified and shown on the Drawings. The system includes, but is not necessarily limited to the following:
 - 1. Processor modules.
 - 2. Communication equipment.
 - 3. Input/output (I/O) modules.
 - 4. Operator interface equipment.
 - 5. Mounting racks.
 - 6. Power supplies.
 - 7. Programming equipment.
 - 8. Software.

1.3 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with requirements of the National Electrical Code (NEC) and all other applicable federal, state, and local codes and regulatory requirements.
- B. Standards: Materials and workmanship shall conform to the following standards:
 - 1. National Electrical Manufacturers Association (NEMA).
 - 2. Institute of Electrical and Electronic Engineers (IEEE).
 - 3. American National Standards Institute (ANSI).
 - 4. National Fire Protection Association (NFPA).
 - 5. Underwriters' Laboratories (UL).
 - 6. International Society for Measurement and Control (ISA).

- C. Qualifications
 - 1. Manufacturer's Qualifications: Firms regularly engaged in the manufacture of programmable logic controllers (PLCs) whose products have been in satisfactory use in similar service for not less than 5 years.
 - 2. Installer's Qualifications: Firm with at least 5 years of successful installation experience on projects with materials and equipment similar to items specified herein.

1.4 SUBMITTALS

- A. General: Furnish manufacturer's product data for all components.
- B. Materials List: Submit a bill of materials listing quantities, manufacturer's name, and catalog numbers.
- C. Wiring Diagrams: Submit wiring diagrams showing all connections for all equipment furnished under this section. Wire, terminal, and component labeling shall follow established facility conventions where applicable.
- D. System Hardware and Software Documents: Furnish a system block diagram, I/O drawings, and control strategy descriptions. Turn over all factory software documentation and manuals to the Engineer after completion of field testing.
- E. Dimensional Drawings: Furnish dimensional drawings for each piece of equipment to be provided.
- F. Program Documentation: Submit annotated printouts of all PLC and Human Machine Interface (HMI) programs. Provide copies of all PLC and HMI programs on a flash drive.
- G. Manufacturer's Data Sheet: Provide manufacturer's data sheet on all equipment including model numbers, serial numbers, ranges, scales, and a detail of each component.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Storage and Protection: Store the items furnished under this section in a manner that meets the requirements of the manufacturer until they can be installed. Use all means necessary to protect the material of this section before, during, and after installation, and to protect the installed work and materials of all other trades.

1.6 DEFINITIONS

- A. Training Day: A training day is defined as 8 hours of classroom and hands-on instruction, including two 15-minute breaks and excluding lunchtime, Monday through Friday.

1.7 SCADA ALLOWANCE

- A. The Contractor shall include in the bid an allowance for the purchase of computers, accessories, peripherals, and/or furniture for the Owner. These components shall be provided by the System Integrator. The Owner shall be able to select the computers, accessories, peripherals, and/or furniture during the shop drawing review process with technical input from the System Integrator.

PART 2 - PRODUCTS

2.1 SCADA SYSTEM

- A. Programmable Logic Controller (PLC) Components:
 - 1. Rack Mounted:
 - a. Processor Module: 1756-L81E
 - b. Digital Input Module: 1756-IA16I
 - c. Digital Output Module: 1756-OW16I
 - d. Analog Input Module: 1756-IF8I
 - e. RTD Analog Input Module: 1756-IR12
 - f. Analog Output Module: 1756-OF8I
 - g. Communication Module: 1756-EN2T
 - h. Power Supply: 1756-PA75/B
 - i. Chassis: 1756-A17
 - 2. Protocol Gateway:
 - a. Model as required for native protocol to Ethernet/IP conversion for quantity of connected devices.
 - b. DIN Rail mounted
 - 3. Manufacturers:
 - a. All components shall be manufactured by Allen-Bradley or an Encompass Partner.

- B. Operator Interface Terminal (OIT):
 - 1. Features:
 - a. Touch screen flat display
 - b. LED backlit LCD
 - c. 24-bit 16.7M colors
 - d. Size: 15" diagonal nominal, unless otherwise noted
 - e. Resolution: 1024x768, minimum
 - f. Communications: Ethernet/IP, USB
 - g. SD card slot
 - h. NEMA 12
 - i. Real-time battery backed clock
 - j. Memory: 1 GB RAM and 1 GB user storage
 - k. Input Power: 120VAC
 - 2. Manufacturers:
 - a. Allen-Bradley, PanelView 5510

2.2 SCHEDULES

- A. Schedule: See attachment.

PART 3 - EXECUTION

3.1 CUSTOM PROGRAMMING

- A. Custom Programming of all vendor provided control panels, including their PLCs and OITs, shall be provided by that vendor under the applicable specification section of the associated equipment.
 - 1. Provide database spreadsheets for peer-to-peer communication coordination between other onsite PLCs that need to share data.
 - 2. Provide database spreadsheets for Plant HMI/SCADA communication coordination.

3. Provide annotated copies of all PLC programs.
 4. Provide an electronic copy of all PLC and OIT programming files for the Owner on a flash drive. Format shall be as required to reload into PLC memory. Logic version shall be the final program after all equipment has been installed and commissioned and Operational Demonstration is complete and successful to the Owner's approval.
- B. Custom Programming of non-vendor provided control panels, including their PLCs and OITs, will be provided by the Owner.
- C. Custom Programming of plant's existing HMI/SCADA will be provided by the Owner.
- D. Variable Frequency Drives
1. Provide programming for all VFDs connected to the network.
 2. Read and display the contents of a minimum of eight registers in each VFD.
 3. Coordinate with the Owner prior to the start of programming to select the register to be displayed.
- E. Graphic Screens
1. Submit all graphic screens for Owner review and comment when sixty percent complete.
 2. Provide navigation controls on all screens to allow movement between screens.
 3. Conform to NFPA 79, Industrial Machinery on colors for indicators and controls.
 4. Conform to Owner standards for colors of process equipment and piping.
 5. Utilize industry standard symbols or graphically realistic drawings for process equipment.
 6. Provide a separate screen for each group of process equipment.
 7. Group related screens in a logical manner such as by building, plant flow, liquid stream/solids stream, etc.
 8. At a minimum, provide the following screens:
 - a. Plant Overview
 - b. NF Building Overview
 - c. Break Tank Pumps Overview
 - d. NF Feed Pumps Overview
 - e. NF Skids Overview
 - f. Corrosion Inhibitor System Overview
 - g. Sodium Hydroxide System Overview
 - h. Sodium Bisulfite System Overview
 - i. Antiscalant System Overview
 - j. Break Tank Pump Control Graphics
 - k. NF Feed Pump Control Graphics
 - l. Corrosion Inhibitor Chemical Equipment Control Graphics
 - m. Corrosion Inhibitor Chemical Feed Control Graphic
 - n. Sodium Hydroxide Chemical Equipment Control Graphics
 - o. Sodium Hydroxide Chemical Feed Control Graphic
 - p. Sodium Bisulfite Chemical Equipment Control Graphics
 - q. Sodium Bisulfite Chemical Feed Control Graphic
 - r. Antiscalant Chemical Equipment Control Graphics
 - s. Antiscalant Chemical Feed Control Graphic
 - t. Chemical Feed Building Overview
 - u. Sodium Hypochlorite System Overview
 - v. Fluoride System Overview
 - w. Sodium Hypochlorite Chemical Equipment Control Graphics
 - x. Sodium Hypochlorite Chemical Feed Control Graphic

- y. Fluoride Chemical Equipment Control Graphics
- z. Fluoride Chemical Feed Control Graphic
- aa. Electrical Service Overview
- bb. Alarm Summary Screens
- cc. Equipment Runtimes (with resets) Screen
- dd. Totalizers Screen
- ee. (10) Analog Signal Trending Screens – Owner Directed
- ff. (10) Overview/Control Screens – Owner Directed

F. Global Programmed Control Strategies

1. Meet with Plant Personnel before start of programming to determine:
 - a. Time of day for resetting of daily totalizers
 - b. Security Levels for all screens
 - c. The master PCS clock and approach to sync network devices
2. Display all alarms at the HMI.
3. Provide means to acknowledge all alarms at the HMI.
4. Provide alarms for PLC failure and network failure.
5. Totalize the number of starts for all process equipment and display on the plant HMI.
6. All process setpoints displayed on HMI screens and read back for confirmation.
7. All process setpoints adjustable from the HMI screens with correct security level.
8. Perform a runtime calculation for all process equipment at PLC and display at the HMI.
9. Display rate, total, and daily total for all process flows at the HMI.
10. Display all process levels at the HMI.
11. Store average daily flow rates and peak hourly flow rates of all flow meters one year or more at SCADA.
12. One year of data shall be stored for trending with data saved every 15 minutes. Daily totals shall also be saved. Each year, or at any time, the Operator shall be able to copy this data to a CD or DVD in a spreadsheet format.
13. All inline instrumentation shall be shown with instantaneous values on the HMI. One year of data shall be stored for trending. Each year, or at any time, the Operator shall be able to copy this data to a CD or DVD in a spreadsheet format.
14. All data shall be automatically graphed when chosen by the operator. These trending graphs shall not reset when closed or when the operator switches between data screens or other graphs.
15. All bits/elements in PLC logic shall be commented. If not used, then comment as SPARE.
16. SCADA historical graphs shall include programming to constantly refresh to appear as a “live, historical trend“.

G. SCADA Programming Functional Requirements

1. The Functional Descriptions below are intended to aid in defining the scope of work for PLC/OIT/HMI programming. These functional descriptions are intended to be supplemental to the requirements as shown on the Drawings. Hardwired interlocks for equipment control may not be described below. Hardwired interlocks shall be mimicked in PLC logic.
2. Where the referenced detail applies to multiple, similar equipment controls, only one is described. Control for associated equipment is similar.
3. Reference the PLC I/O schedules. The PLC I/O shall be utilized by PLC/HMI programming, as required, to allow the respective equipment to function as described by the Contract Documents.

- a. All alarm and equipment status monitoring PLC I/O inputted into the Plant Control System (PCS) shall be annunciated via the HMI.
- 4. All references to set points as “adjustable” below shall include the capability to adjust the set point via the HMI.
- 5. FUNCTIONAL DESCRIPTION INDEX:
 - a. “6. NF BUILDING BREAK TANK”
 - b. “7. NF BUILDING SOFTENING SYSTEM”
 - c. “8. CORROSION INHIBITOR CHEMICAL FEED SYSTEM”
 - d. “9. SODIUM HYDROXIDE CHEMICAL FEED SYSTEM”
 - e. “10. SODIUM BISULFITE CHEMICAL FEED SYSTEM”
 - f. “11. ANTISCALANT CHEMICAL FEED SYSTEM”
 - g. “12. SODIUM HYPOCHLORITE CHEMICAL FEED SYSTEM”
 - h. “13. FLUORIDE CHEMICAL FEED SYSTEM”
 - i. “14. HIGH SERVICE PUMPS”
 - j. “15. EXISTING PROCESS CONTROL MODIFICATIONS”
 - k. “16. EMERGENCY POWER”
 - l. “17. CRITICAL ALARMS”
- 6. NF BUILDING BREAK TANK
 - a. Break Tank 1 Level
 - 1) General: Used to continuously monitor the liquid level in the Break Tank.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Used for control of existing groundwater wells.
 - 4) Monitoring:
 - a) Local: Instantaneous level indication
 - b) PCS: Break Tank 1 Level
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Break Tank 1 Level, Loss of Signal
 - b. Break Tank 1 Low Cutoff Level
 - 1) General: Used to protect the Break Tank Pumps from operating when level is too low.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Break Tank 1 Low Level
- 7. NF BUILDING SOFTENING SYSTEM
 - a. Break Tank Pump 1

- 1) General: Used to source water from the Break Tank to the NF Building process (softening and/or bypass).
- 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
 - b) VFD: The VFD frequency can be manually adjusted utilizing the potentiometer or VFD HIM module at the VFD.
 - c) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of Break Tank Pump 1 via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop and adjust the frequency of Break Tank Pump 1.
 - (2) AUTO: Break Tank Pump 1 shall be automatically controlled via PLC programming. Break Tank Pump 1 speed shall be varied maintain an operator entered NF Feed Pump Suction Header Pressure setpoint. Break Tank Pumps shall be assigned a Lead, Lag 1, Lag 2, or Standby role and start/stop as needed to meet the setpoint.
- 3) Logic Interlocks/Permissives:
 - a) NF Bypass Valve must not be closed for the pump to operate.
- 4) Monitoring:
 - a) Local: Running, Stopped
 - b) VFD: Running, Stopped, Frequency, Amps, Volts
 - c) PCS: Remote, Running, Stopped, Frequency, Amps, Volts, VFD LOR Switch Position
- 5) Alarms:
 - a) Local: General Alarm
 - b) VFD: VFD Fault Alarm
 - c) PCS: Motor High Temperature, High Discharge Pressure, VFD Fault, Loss of Signal
- b. Break Tank Pump 1 Discharge Pressure
 - 1) General: Used to continuously monitor the discharge pressure for Break Tank Pump 1.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous pressure indication
 - b) PCS: Break Tank Pump 1 Discharge Pressure
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Break Tank Pump 1 Discharge Pressure, Loss of Signal
- c. NF Bypass Flow
 - 1) General: Used to continuously monitor the NF Bypass flow rate.
 - 2) Control:

- a) Local: None
- b) PCS: None
- 3) Logic Interlocks/Permissives:
 - a) Reference the NF Bypass Flow Control Loop
- 4) Monitoring:
 - a) Local: Instantaneous flow indication
 - b) PCS: NF Bypass Flow
- 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Bypass Flow, Loss of Signal
- d. NF Bypass Flow Control Valve
 - 1) General: Used to divert flow around the membrane skids.
 - 2) Control:
 - a) Local: With the LOCAL-STOP-REMOTE selector switch at the actuator in the LOCAL position, the operator can open or close the valve by using the OPEN-CLOSE selector switch at the actuator. With the LOCAL-STOP-REMOTE selector switch at the actuator in the STOP position, the actuator will stop and maintain its current position.
 - b) PCS: With the LOCAL-STOP-REMOTE selector switch at the actuator in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the NF Bypass Flow Control Valve via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually set a desired position.
 - (2) AUTO: The NF Bypass Flow Control Valve shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED, HARDNESS, and PERCENT control modes.
 - (a) FIXED: The valve position shall vary in order to maintain an operator entered desired NF Bypass Flow rate.
 - (b) HARDNESS: The valve position shall vary in order to maintain an operator entered desired Blended Water Hardness.
 - a. If no Break Tank Pumps are operating and a plant run command is active, the valve shall move to the operator entered plant startup initial position and shall remain at that position until a Break Tank Pump starts operating.
 - b. Flow rate = $[(\text{BW flowrate} \times \text{BW hardness}) - (\text{NFP flowrate} \times \text{NFP hardness})] / \text{NFF hardness}$
 - (c) PERCENT: The valve position shall vary in order to maintain an operator entered desired NF Bypass Flow rate as a percentage of Blended Water Flow.
 - a. If no Break Tank Pumps are operating and a plant run command is active, the valve shall move to the operator entered plant startup

initial position and shall remain at that position until a Break Tank Pump starts operating.

- 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: Opened, Closed, Position
 - b) PCS: Remote, Opened, Closed, Position
 - 5) Alarms:
 - a) Local: Fault
 - b) PCS: Fault, Loss of Signal
- e. Break Tank Pumps Discharge Header Pressure
- 1) General: Used to continuously monitor the pressure for Break Tank Pump Discharge Header.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous pressure indication
 - b) PCS: Break Tank Pumps Discharge Header Pressure
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Break Tank Pumps Header Discharge Pressure, Loss of Signal
- f. Cartridge Filter 1 Differential Pressure
- 1) General: Used to monitor if the Cartridge Filter needs cleaned.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous differential pressure indication
 - b) PCS: Cartridge Filter 1 Differential Pressure
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Cartridge Filter 1 Differential Pressure, Loss of Signal
- g. NF Feed ORP (Pre-Injection) Level
- 1) General: Used to continuously monitor the ORP level of the NF Feed water prior to chemical injection.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Used for chemical feed dosing calculations.
 - 4) Monitoring:
 - a) Local: Instantaneous ORP level indication
 - b) PCS: NF Feed ORP (Pre-Injection) Level
 - 5) Alarms:

- a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Feed ORP (Pre-Injection) Level, Loss of Signal
- h. NF Feed Pumps Suction Header Pressure
 - 1) General: Used to continuously monitor the pressure for NF Feed Pumps Suction Header.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Used for Break Tank Pump speed control.
 - 4) Monitoring:
 - a) Local: Instantaneous pressure indication
 - b) PCS: NF Feed Pumps Suction Header Pressure
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Feed Pumps Suction Header Pressure, Loss of Signal
- i. NF Feed ORP (Post-Injection) Level
 - 1) General: Used to continuously monitor the ORP level of the NF Feed water after chemical injection.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous ORP level indication
 - b) PCS: NF Feed ORP (Post-Injection) Level
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Feed ORP (Post-Injection) Level, Loss of Signal
- j. NF Feed Pump 1 Suction Pressure
 - 1) General: Used to continuously monitor the pressure for NF Feed Pump 1 Suction.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous pressure indication
 - b) PCS: NF Feed Pump 1 Suction Pressure
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Feed Pump 1 Suction Pressure, Loss of Signal
- k. NF Feed Pump 1
 - 1) General: Used to source water to the membrane skids.
 - 2) Control:

- a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
- b) VFD: The VFD frequency can be manually adjusted utilizing the potentiometer or VFD HIM module at the VFD.
- c) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of NF Feed Pump 1 via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop and adjust the frequency of NF Feed Pump 1.
 - (2) AUTO: NF Feed Pump 1 shall be automatically controlled via PLC programming. NF Feed Pump 1 speed shall be varied as called for by the NF Skids Master PLC.
- 3) Logic Interlocks/Permissives: None
- 4) Monitoring:
 - a) Local: Running, Stopped
 - b) VFD: Running, Stopped, Frequency, Amps, Volts
 - c) PCS: Remote, Running, Stopped, (2) Vibration Sensors, (2) Motor Bearing Temps, Frequency, Amps, Volts, VFD LOR Switch Position
- 5) Alarms:
 - a) Local: General Alarm
 - b) VFD: VFD Fault Alarm
 - c) PCS: Motor High Temperature, (2) High Vibration Alarms, (2) High Bearing Temp Alarm, Low Suction Pressure, High Discharge Pressure, VFD Fault, Loss of Signal
- l. NF Feed Pump 1 Discharge Pressure
 - 1) General: Used to continuously monitor the pressure for NF Feed Pump 1 Discharge.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous pressure indication
 - b) PCS: NF Feed Pump 1 Discharge Pressure
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Feed Pump 1 Discharge Pressure, Loss of Signal
- m. Degasifier 1
 - 1) General: Used to remove gases from the water before entering the clearwell.
 - 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the blower via the START/STOP pushbuttons.

- b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of Degasifier 1 via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop Degasifier 1.
 - (2) AUTO: Degasifier 1 shall be automatically controlled via PLC programming. Degasifier 1 shall operate whenever the plant is running.
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Alarm
 - b) PCS: Motor High Temperature, Motor Overload
 - n. Degasifier 1 Inlet Screen Differential Pressure
 - 1) General: Used to monitor if Degasifier 1 Screen needs cleaned.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous differential pressure indication
 - b) PCS: Degasifier 1 Screen Differential Pressure
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Degasifier 1 Inlet Screen Differential Pressure, Loss of Signal
 - o. Blended Water Flow
 - 1) General: Used to continuously monitor the Blended Water flow rate.
 - 2) Control:
 - a) Local: None
 - b) PCS: Operator shall have the ability to select MAINTENANCE, FLOWMETER, or SUM TOTAL as the BW Flow signal source via the HMI.
 - (1) MAINTENANCE: The operator shall have the ability to enter in a flow value during flowmeter maintenance to reduce impact on chemical feed systems.
 - (2) FLOWMETER: The signal from this flowmeter is used.
 - (3) SUM TOTAL: The sum of all Skid Discharge Flows plus the NF Bypass Flow signal is used.
 - 3) Logic Interlocks/Permissives:
 - a) Used for the chemical feed dosing calculations.
 - 4) Monitoring:
 - a) Local: Instantaneous flow indication
 - b) PCS: Blended Water Flow
 - 5) Alarms:
 - a) Local: None

- b) PCS: High-High, High, Low, Low-Low Blended Water Flow, Loss of Signal
- p. Blended Water pH
 - 1) General: Used to continuously monitor the pH level of the Blended Water.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Used for chemical feed dosing calculations.
 - 4) Monitoring:
 - a) Local: Instantaneous pH indication
 - b) PCS: Blended Water pH
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Blended Water pH, Loss of Signal
- q. Blended Water Chlorine Residual
 - 1) General: Used to continuously monitor the chlorine residual of the Blended Water.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous Chlorine Residual indication
 - b) PCS: Blended Water Chlorine Residual
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Blended Water Chlorine Residual, Loss of Signal
- r. Blended Water Fluoride Residual
 - 1) General: Used to continuously monitor the fluoride residual of the Blended Water.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous Fluoride Residual indication
 - b) PCS: Blended Water Fluoride Residual
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Blended Water Fluoride Residual, Loss of Signal
- s. Blended Water Phosphate Residual
 - 1) General: Used to continuously monitor the phosphate residual of the Blended Water.
 - 2) Control:
 - a) Local: None

- b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous Phosphate Residual indication
 - b) PCS: Blended Water Phosphate Residual
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Blended Water Phosphate Residual, Loss of Signal
- t. NF Concentrate Conductivity
 - 1) General: Used to continuously monitor the conductivity of the skid concentrate.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous conductivity indication
 - b) PCS: NF Concentrate Conductivity
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Concentrate Conductivity, Loss of Signal
- u. NF Concentrate pH
 - 1) General: Used to continuously monitor the pH level of the NF Concentrate.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous pH indication
 - b) PCS: NF Concentrate pH
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Concentrate pH, Loss of Signal
- v. NF Skid Control Interface
 - 1) General: All control of individual NF Skids, Membrane Cleaning System, and associated equipment is performed by the NF Skids Master PLC. Custom programming requirements for that vendored system are specified under Section 466340. Programming requirements described below are provided under this Section for NF Building ACP PLC/OIT and SCADA.
 - 2) Operator shall have the ability to enter the following water quality parameters for NF Feed and NF Permeate. These values will be used to determine the NF Bypass flowrate when operated in HARDNESS mode.
 - a) Total Hardness in NF Feed (THNFF = 366 mg/L as CaCO₃)
 - b) Total Hardness in NF Permeate (THNFP = 10.8 mg/L as CaCO₃)
 - 3) PLC shall calculate and SCADA shall indicate and trend the following:

- a) Total NF Feed flow rate (Total NFF = NFP + NFC)
 - b) NF Bypass Flow (NFB = NFP x %NFB).
 - c) Indicate Raw Water Flow Rate (RW = NFF + NFB).
 - d) Actual %NFB (%NFB = NFB / BLW)
 - (1) NFB from flow meter
 - (2) BLW = NFP flow meters from skids + NFB flow meter
 - (3) THBLW = [(NFB x THNFF) + (NFP x THNFP)] / BW
 - 4) All Skid OIT and MCS screen information and operator entry shall be duplicated at SCADA.
- w. NF Process Start/Stop
- 1) Control: Operator shall have the ability to place the softening process on automated Start/Stop control. If enabled, the plant shall start if the existing clearwell level drops below an operator adjustable setpoint. The plant shall shutdown if the clearwell level rises above an operator adjustable setpoint. Operator shall have the ability to select which clearwell level to use as the primary control signal.
 - 2) When the plant startup is auto initiated:
 - a) Open NF Bypass Valve to initial setpoint.
 - b) Start Chemical Feed Systems.
 - c) Start Break Tank Pump.
 - d) Start UV System.
 - e) Start NF Feed Pumps and NF Skids (in multiples of two). The quantity of skids needed shall be based on NF Skid Call Level setpoints.
 - 3) When the plant shutdown is auto initiated:
 - a) NF Skids and NF Feed Pumps shall perform a permeate flush or forward flush before stopping.
 - b) Break Tank Pumps shall continue to operate until all NF Skids and NF Feed Pumps have stopped.
 - c) Stop UV System.
 - d) Close NF Bypass Valve.
 - e) Stop Chemical Feed Systems.

8. CORROSION INHIBITOR CHEMICAL FEED SYSTEM

- a. Corrosion Inhibitor Storage Tank 1 Level
 - 1) General: Used to continuously monitor the liquid level in Corrosion Inhibitor Storage Tank 1.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous level indication
 - b) PCS: Corrosion Inhibitor Storage Tank 1 Level
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Corrosion Inhibitor Storage Tank 1 Level, Loss of Signal
- b. Corrosion Inhibitor Storage Tank 1 Outlet Valve

- 1) General: Used to isolate Corrosion Inhibitor Storage Tank 1 from the outlet header.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (4) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (5) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- c. Corrosion Inhibitor Storage Tank 1 Recirc Valve
- 1) General: Used to direct chemical to Corrosion Inhibitor Storage Tank 1 from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- d. Corrosion Inhibitor Transfer Pump
- 1) General: Used to pump Corrosion Inhibitor chemical between tanks.
 - 2) Control:

- a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
- b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
 - (2) AUTO: Corrosion Inhibitor Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Corrosion Inhibitor Chemical Transfer Sequence.
- 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
- 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
- 5) Alarms:
 - a) Local: Alarm
 - b) PCS: Motor High Temperature, Motor Overload
- e. Corrosion Inhibitor Day Tank Inlet Valve
 - 1) General: Used to direct chemical to Corrosion Inhibitor Day Tank from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- f. Corrosion Inhibitor Day Tank High Level
 - 1) General: Used to prevent overfilling the day tank.
 - 2) Control:
 - a) Local: None.
 - b) PCS: None.

- 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Corrosion Inhibitor Day Tank High Level
- g. Corrosion Inhibitor Day Tank Weight
- 1) General: Used to continuously monitor the weight of the Corrosion Inhibitor Day Tank.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous weight indication
 - b) PCS: Corrosion Inhibitor Day Tank Weight
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Corrosion Inhibitor Day Tank Weight, Loss of Signal
- h. Corrosion Inhibitor Feed Pump 1
- 1) General: Used to inject Corrosion Inhibitor into the water for treatment.
 - 2) Control:
 - a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
 - b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
 - (2) AUTO: Corrosion Inhibitor Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
 - (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
 - (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint.
 - 3) Logic Interlocks/Permissives:
 - a) Corrosion Inhibitor Day Tank Low-Low Level Alarm must be inactive for pump to operate.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:

- a) Local: Fault
 - b) PCS: Fault, Loss of Signal, Flow Deviation Alarm
- i. Corrosion Inhibitor Chemical Transfer Sequence
 - 1) General: Used for automated control of transferring chemical between tanks.
 - 2) Control:
 - a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
 - b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
 - (1) TRANSFER:
 - a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
 - d. Once both opened, the transfer pump shall operate until the Stop level is reached.
 - e. Once the level is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
 - i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
 - j. All applicable equipment must not have any active alarms in order to initiate the transfer.
 - (2) RECIRC:
 - a. The operator shall select a storage tank and enter a desired time duration setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
 - d. Once both opened, the transfer pump shall operate until the time duration has expired.
 - e. Once time expires, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
 - i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:

- a. The operator shall select the source storage tank and enter a Stop weight setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
 - d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
 - e. Once the weight is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
 - i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
 - j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
 - k. All applicable equipment must not have any active alarms in order to initiate the transfer.
- j. Corrosion Inhibitor Feed Room Emergency Eyewash/Shower Flow Switch
- 1) General: Used to detect an activation of the emergency eyewash/shower.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Corrosion Inhibitor Feed Room Emergency Eyewash/Shower Activated
- k. Corrosion Inhibitor Containment Area Wet Floor Switch
- 1) General: Used to detect a Corrosion Inhibitor tank leak.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Corrosion Inhibitor Containment Area Wet Floor Switch Activated

9. SODIUM HYDROXIDE CHEMICAL FEED SYSTEM

- a. Sodium Hydroxide Storage Tank 1 Level
 - 1) General: Used to continuously monitor the liquid level in Sodium Hydroxide Storage Tank 1.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous level indication
 - b) PCS: Sodium Hydroxide Storage Tank 1 Level
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Hydroxide Storage Tank 1 Level, Loss of Signal

- b. Sodium Hydroxide Storage Tank 1 Outlet Valve
 - 1) General: Used to isolate Sodium Hydroxide Storage Tank 1 from the outlet header.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None

- c. Sodium Hydroxide Storage Tank 1 Recirc Valve
 - 1) General: Used to direct chemical to Sodium Hydroxide Storage Tank 1 from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.

- (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
 - d. Sodium Hydroxide Transfer Pump
 - 1) General: Used to pump Sodium Hydroxide chemical between tanks.
 - 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
 - b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
 - (2) AUTO: Sodium Hydroxide Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Sodium Hydroxide Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Alarm
 - b) PCS: Motor High Temperature, Motor Overload
 - e. Sodium Hydroxide Day Tank Inlet Valve
 - 1) General: Used to direct chemical to Sodium Hydroxide Day Tank from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.

- (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- f. Sodium Hydroxide Day Tank High Level
 - 1) General: Used to prevent overfilling the day tank.
 - 2) Control:
 - a) Local: None.
 - b) PCS: None.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Sodium Hydroxide Day Tank High Level
- g. Sodium Hydroxide Day Tank Weight
 - 1) General: Used to continuously monitor the weight of the Sodium Hydroxide Day Tank.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous weight indication
 - b) PCS: Sodium Hydroxide Day Tank Weight
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Hydroxide Day Tank Weight, Loss of Signal
- h. Sodium Hydroxide Feed Pump 1
 - 1) General: Used to inject Sodium Hydroxide into the water for treatment.
 - 2) Control:
 - a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
 - b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.

- (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
 - (2) AUTO: Sodium Hydroxide Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
 - (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
 - (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired Blended Water pH setpoint.
- 3) Logic Interlocks/Permissives:
 - a) Sodium Hydroxide Day Tank Low-Low Level Alarm must be inactive for pump to operate.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Fault
 - b) PCS: Fault, Loss of Signal, Flow Deviation Alarm
- i. Sodium Hydroxide Carrier Water Valve
- 1) General: Used to convey chemical for injection into the process stream.
 - 2) Control:
 - a) Local: None
 - b) PCS: The operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall be open when any Sodium Hydroxide Feed Pump is operating.
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- j. Sodium Hydroxide Chemical Transfer Sequence
- 1) General: Used for automated control of transferring chemical between tanks.
 - 2) Control:
 - a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
 - b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
 - (1) TRANSFER:
 - a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.

- b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
- c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
- d. Once both opened, the transfer pump shall operate until the Stop level is reached.
- e. Once the level is reached, both valves shall travel closed.
- f. Once either valve is closed, the transfer pump shall stop.
- g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
- h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
- i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
- j. All applicable equipment must not have any active alarms in order to initiate the transfer.

(2) RECIRC:

- a. The operator shall select a storage tank and enter a desired time duration setpoint.
- b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
- c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
- d. Once both opened, the transfer pump shall operate until the time duration has expired.
- e. Once time expires, both valves shall travel closed.
- f. Once either valve is closed, the transfer pump shall stop.
- g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
- h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
- i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:

- a. The operator shall select the source storage tank and enter a Stop weight setpoint.
- b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
- c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
- d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
- e. Once the weight is reached, both valves shall travel closed.
- f. Once either valve is closed, the transfer pump shall stop.
- g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.

- h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
 - i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
 - j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
 - k. All applicable equipment must not have any active alarms in order to initiate the transfer.
 - k. Sodium Hydroxide Feed Room Emergency Eyewash/Shower Flow Switch
 - 1) General: Used to detect an activation of the emergency eyewash/shower.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Sodium Hydroxide Feed Room Emergency Eyewash/Shower Activated
 - l. Sodium Hydroxide Containment Area Wet Floor Switch
 - 1) General: Used to detect a Sodium Hydroxide tank leak.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Sodium Hydroxide Containment Area Wet Floor Switch Activated
 - m. Sodium Hydroxide Feed Room Temperature
 - 1) General: Used to continuously monitor the temperature of the Sodium Hydroxide Feed Room.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous temperature indication
 - b) PCS: Sodium Hydroxide Feed Room Temperature
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Hydroxide Feed Room Temperature, Loss of Signal

10. SODIUM BISULFITE CHEMICAL FEED SYSTEM

- a. Sodium Bisulfite Storage Tank 1 Level
 - 1) General: Used to continuously monitor the liquid level in Sodium Bisulfite Storage Tank 1.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Bisulfite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous level indication
 - b) PCS: Sodium Bisulfite Storage Tank 1 Level
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Bisulfite Storage Tank 1 Level, Loss of Signal
- b. Sodium Bisulfite Storage Tank 1 Outlet Valve
 - 1) General: Used to isolate Sodium Bisulfite Storage Tank 1 from the outlet header.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Bisulfite Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Bisulfite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- c. Sodium Bisulfite Storage Tank 1 Recirc Valve
 - 1) General: Used to direct chemical to Sodium Bisulfite Storage Tank 1 from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.

- (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Bisulfite Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Bisulfite Chemical Transfer Sequence
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
 - d. Sodium Bisulfite Transfer Pump
 - 1) General: Used to pump Sodium Bisulfite chemical between tanks.
 - 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
 - b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
 - (2) AUTO: Sodium Bisulfite Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Sodium Bisulfite Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Bisulfite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Alarm
 - b) PCS: Motor High Temperature, Motor Overload
 - e. Sodium Bisulfite Day Tank Inlet Valve
 - 1) General: Used to direct chemical to Sodium Bisulfite Day Tank from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.

- (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Bisulfite Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Bisulfite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- f. Sodium Bisulfite Day Tank High Level
 - 1) General: Used to prevent overfilling the day tank.
 - 2) Control:
 - a) Local: None.
 - b) PCS: None.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Bisulfite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Sodium Bisulfite Day Tank High Level
- g. Sodium Bisulfite Day Tank Weight
 - 1) General: Used to continuously monitor the weight of the Sodium Bisulfite Day Tank.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Bisulfite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous weight indication
 - b) PCS: Sodium Bisulfite Day Tank Weight
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Bisulfite Day Tank Weight, Loss of Signal
- h. Sodium Bisulfite Feed Pump 1
 - 1) General: Used to inject Sodium Bisulfite into the water for treatment.
 - 2) Control:
 - a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
 - b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.

- (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
- (2) AUTO: Sodium Bisulfite Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
 - (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
 - (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired NF Feed ORP (Pre-Injection) setpoint.
- 3) Logic Interlocks/Permissives:
 - a) Sodium Bisulfite Day Tank Low-Low Level Alarm must be inactive for pump to operate.
- 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
- 5) Alarms:
 - a) Local: Fault
 - b) PCS: Fault, Loss of Signal, Flow Deviation Alarm
- i. Sodium Bisulfite Chemical Transfer Sequence
 - 1) General: Used for automated control of transferring chemical between tanks.
 - 2) Control:
 - a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
 - b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
 - (1) TRANSFER:
 - a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
 - d. Once both opened, the transfer pump shall operate until the Stop level is reached.
 - e. Once the level is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
 - i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
 - j. All applicable equipment must not have any active alarms in order to initiate the transfer.
 - (2) RECIRC:

- a. The operator shall select a storage tank and enter a desired time duration setpoint.
- b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
- c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
- d. Once both opened, the transfer pump shall operate until the time duration has expired.
- e. Once time expires, both valves shall travel closed.
- f. Once either valve is closed, the transfer pump shall stop.
- g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
- h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
- i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:

- a. The operator shall select the source storage tank and enter a Stop weight setpoint.
- b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
- c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
- d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
- e. Once the weight is reached, both valves shall travel closed.
- f. Once either valve is closed, the transfer pump shall stop.
- g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
- h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
- i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
- j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
- k. All applicable equipment must not have any active alarms in order to initiate the transfer.

j. Sodium Bisulfite Feed Room Emergency Eyewash/Shower Flow Switch

- 1) General: Used to detect an activation of the emergency eyewash/shower.
- 2) Control:
 - a) Local: None
 - b) PCS: None
- 3) Logic Interlocks/Permissives: None
- 4) Monitoring:
 - a) Local: None
 - b) PCS: None
- 5) Alarms:
 - a) Local: None

- b) PCS: Sodium Bisulfite Feed Room Emergency Eyewash/Shower Activated
 - k. Sodium Bisulfite Containment Area Wet Floor Switch
 - 1) General: Used to detect a Sodium Bisulfite tank leak.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Sodium Bisulfite Containment Area Wet Floor Switch Activated
 - l. Sodium Bisulfite Feed Room Temperature
 - 1) General: Used to continuously monitor the temperature of the Sodium Bisulfite Feed Room.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous temperature indication
 - b) PCS: Sodium Bisulfite Feed Room Temperature
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Bisulfite Feed Room Temperature, Loss of Signal
11. ANTISCALANT CHEMICAL FEED SYSTEM
- a. Antiscalant Transfer Pump
 - 1) General: Used to pump Antiscalant chemical between tanks.
 - 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
 - b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
 - (2) AUTO: Antiscalant Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Antiscalant Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Antiscalant Chemical Transfer Sequence.
 - 4) Monitoring:

- a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Alarm
 - b) PCS: Motor High Temperature, Motor Overload
- b. Antiscalant Day Tank High Level
 - 1) General: Used to prevent overfilling the day tank.
 - 2) Control:
 - a) Local: None.
 - b) PCS: None.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Antiscalant Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Antiscalant Day Tank High Level
- c. Antiscalant Day Tank Weight
 - 1) General: Used to continuously monitor the weight of the Antiscalant Day Tank.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Antiscalant Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous weight indication
 - b) PCS: Antiscalant Day Tank Weight
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Antiscalant Day Tank Weight, Loss of Signal
- d. Antiscalant Feed Pump 1
 - 1) General: Used to inject Antiscalant into the water for treatment.
 - 2) Control:
 - a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
 - b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
 - (2) AUTO: Sodium Bisulfite Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
 - (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.

- (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint using the sum of all Skid Inlet Flows.
 - 3) Logic Interlocks/Permissives:
 - a) Antiscalant Day Tank Low-Low Level Alarm must be inactive for pump to operate.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Fault
 - b) PCS: Fault, Loss of Signal, Flow Deviation Alarm
- e. Antiscalant Injection Flow
 - 1) General: Used to detect that Antiscalant is being injected into the process stream.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) An Antiscalant Feed Pump must be operating for alarm logic to be active.
 - b) Antiscalant flow must be present for an NF Skid to operate.
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Antiscalant No Flow Alarm
- f. Antiscalant Chemical Transfer Sequence
 - 1) General: Used for automated control of transferring chemical between tanks.
 - 2) Control:
 - a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
 - b) PCS: The operator shall be able to fill the day tank automatically using PLC programming.
 - (1) DAY TANK FILL:
 - a. The operator shall select the source storage tank and enter a Stop weight setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the transfer pump shall operate until the Stop weight is reached.
 - d. Once the weight is reached, the transfer pump shall stop.
 - e. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
 - f. Day Tank High Level Alarm must be inactive for the transfer pump to start.
 - g. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.

- h. All applicable equipment must not have any active alarms in order to initiate the transfer.

12. SODIUM HYPOCHLORITE CHEMICAL FEED SYSTEM

- a. Sodium Hypochlorite Storage Tank 1 Level
 - 1) General: Used to continuously monitor the liquid level in Sodium Hypochlorite Storage Tank 1.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous level indication
 - b) PCS: Sodium Hypochlorite Storage Tank 1 Level
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Hypochlorite Storage Tank 1 Level, Loss of Signal
- b. Sodium Hypochlorite Storage Tank 1 Outlet Valve
 - 1) General: Used to isolate Sodium Hypochlorite Storage Tank 1 from the outlet header.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (3) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (4) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- c. Sodium Hypochlorite Storage Tank 1 Recirc Valve
 - 1) General: Used to direct chemical to Sodium Hypochlorite Storage Tank 1 from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.

- b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Chemical Transfer Sequence.
- 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hypochlorite Chemical Transfer Sequence
- 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
- 5) Alarms:
 - a) Local: None
 - b) PCS: None
- d. Sodium Hypochlorite Dilution Water Flow
 - 1) General: Used to continuously monitor the Sodium Hypochlorite Dilution Water flow rate.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hypochlorite Dilution Control Loop.
 - 4) Monitoring:
 - a) Local: Instantaneous flow indication
 - b) PCS: Sodium Hypochlorite Dilution Water Flow
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Hypochlorite Dilution Water Flow, Loss of Signal
- e. Sodium Hypochlorite Storage Tank 1 Dilution Water Valve
 - 1) General: Used to direct dilution water to Sodium Hypochlorite Storage Tank 1 to lower the solution concentration.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Dilution Control Loop.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hypochlorite Dilution Control Loop.
 - 4) Monitoring:
 - a) Local: Opened, Closed

- b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- f. Sodium Hypochlorite Transfer Pump
 - 1) General: Used to pump Sodium Hypochlorite chemical between tanks.
 - 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
 - b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
 - (2) AUTO: Sodium Hypochlorite Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Sodium Hypochlorite Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Alarm
 - b) PCS: Motor High Temperature, Motor Overload
- g. Sodium Hypochlorite Day Tank Inlet Valve
 - 1) General: Used to direct chemical to Sodium Hypochlorite Day Tank from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hypochlorite Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:

- a) Local: None
 - b) PCS: None
- h. Sodium Hypochlorite Day Tank Level
 - 1) General: Used to continuously monitor the liquid level in Sodium Hypochlorite Day Tank.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous level indication
 - b) PCS: Sodium Hypochlorite Day Tank Level
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Hypochlorite Day Tank Level, Loss of Signal
- i. Sodium Hypochlorite Day Tank High Level
 - 1) General: Used to prevent overfilling the day tank.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hypochlorite Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Sodium Hypochlorite Day Tank High Level
- j. Sodium Hypochlorite Disinfection Feed Pump 1
 - 1) General: Used to inject Sodium Hypochlorite into the water for disinfection treatment.
 - 2) Control:
 - a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
 - b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
 - (2) AUTO: Sodium Hypochlorite Disinfection Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
 - (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.

- (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint while using Blended Water Flow.
 - 3) Logic Interlocks/Permissives:
 - a) Sodium Hypochlorite Day Tank Low-Low Level Alarm must be inactive for pump to operate.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Fault
 - b) PCS: Fault, Loss of Signal, Flow Deviation Alarm
 - k. Sodium Hypochlorite Oxidation Feed Pump 1
 - 1) General: Used to inject Sodium Hypochlorite into the water for oxidation treatment.
 - 2) Control:
 - a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
 - b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
 - (2) AUTO: Sodium Hypochlorite Oxidation Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
 - (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
 - (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint while using Total Filter Flow.
 - 3) Logic Interlocks/Permissives:
 - a) Sodium Hypochlorite Day Tank Low-Low Level Alarm must be inactive for pump to operate.
 - 4) Monitoring:
 - a) Local: Opened, Closed, Position
 - b) PCS: Remote, Opened, Closed, Position
 - 5) Alarms:
 - a) Local: Fault
 - b) PCS: Fault, Loss of Signal
 - l. Sodium Hypochlorite Chemical Transfer Sequence
 - 1) General: Used for automated control of transferring chemical between tanks.
 - 2) Control:
 - a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.

- b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
- (1) TRANSFER:
- a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
 - d. Once both opened, the transfer pump shall operate until the Stop level is reached.
 - e. Once the level is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
 - i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
 - j. All applicable equipment must not have any active alarms in order to initiate the transfer.
- (2) RECIRC:
- a. The operator shall select a storage tank and enter a desired time duration setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
 - d. Once both opened, the transfer pump shall operate until the time duration has expired.
 - e. Once time expires, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
 - i. All applicable equipment must not have any active alarms in order to initiate the sequence.
- (3) DAY TANK FILL:
- a. The operator shall select the source storage tank and enter a Stop level setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.

- d. Once both opened, the transfer pump shall operate until the Stop level is reached.
 - e. Once the level is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. Day Tank High Level Alarm must be inactive for the transfer pump to start.
 - i. Day Tank High Level Switch Alarm must be inactive for the transfer pump to start.
 - j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
 - k. All applicable equipment must not have any active alarms in order to initiate the transfer.
- m. Sodium Hypochlorite Dilution Control Loop
- 1) General: Used for automated control of adding dilution water to storage tanks to reduce the concentration of the solution.
 - 2) Control:
 - a) Local: The operator shall have the ability at the LCP to manually operate system equipment to add dilution water.
 - b) PCS: The operator shall be able to add dilution water automatically using PLC programming.
 - (1) Dilution Water Sequence:
 - a. The operator shall select which storage tanks to add dilution water to and enter a GALLONS setpoint.
 - b. The applicable Storage Tank Dilution Water Valves will open.
 - c. Once the GALLONS setpoint has been reached, the valves shall close.
 - d. Applicable Storage Tank(s) High Level Alarm(s) must be inactive for the sequence to start.
 - e. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
 - f. All applicable equipment must not have any active alarms in order to initiate the sequence.
- n. Sodium Hypochlorite Containment Area Wet Floor Switch
- 1) General: Used to detect a Sodium Hypochlorite tank leak.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Sodium Hypochlorite Containment Area Wet Floor Switch Activated
- o. Sodium Hypochlorite Feed Room Temperature
- 1) General: Used to continuously monitor the temperature of the Sodium Hypochlorite Feed Room.

- 2) Control:
 - a) Local: None
 - b) PCS: None
- 3) Logic Interlocks/Permissives:
 - a) None
- 4) Monitoring:
 - a) Local: Instantaneous temperature indication
 - b) PCS: Sodium Hypochlorite Feed Room Temperature
- 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Hypochlorite Feed Room Temperature, Loss of Signal

13. FLUORIDE CHEMICAL FEED SYSTEM

- a. Fluoride Storage Tank 1 Level
 - 1) General: Used to continuously monitor the liquid level in Fluoride Storage Tank 1.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Fluoride Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous level indication
 - b) PCS: Fluoride Storage Tank 1 Level
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Fluoride Storage Tank 1 Level, Loss of Signal
- b. Fluoride Storage Tank 1 Outlet Valve
 - 1) General: Used to isolate Fluoride Storage Tank 1 from the outlet header.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Fluoride Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Fluoride Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None

- b) PCS: None
- c. Fluoride Storage Tank 1 Recirc Valve
 - 1) General: Used to direct chemical to Fluoride Storage Tank 1 from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Fluoride Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Fluoride Chemical Transfer Sequence
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- d. Fluoride Transfer Pump
 - 1) General: Used to pump Fluoride chemical between tanks.
 - 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
 - b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
 - (2) AUTO: Fluoride Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Fluoride Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Fluoride Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Alarm
 - b) PCS: Motor High Temperature, Motor Overload
- e. Fluoride Day Tank Inlet Valve

- 1) General: Used to direct chemical to Fluoride Day Tank from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Fluoride Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Fluoride Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- f. Fluoride Day Tank High Level
- 1) General: Used to prevent overfilling the day tank.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Fluoride Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Fluoride Day Tank High Level
- g. Fluoride Day Tank Weight
- 1) General: Used to continuously monitor the weight of the Fluoride Day Tank.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Fluoride Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous weight indication
 - b) PCS: Fluoride Day Tank Weight
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Fluoride Day Tank Weight, Loss of Signal

- h. Fluoride Feed Pump 1
 - 1) General: Used to inject Fluoride into the water for treatment.
 - 2) Control:
 - a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.
 - b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
 - (2) AUTO: Fluoride Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
 - (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
 - (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint while using Blended Water Flow.
 - 3) Logic Interlocks/Permissives:
 - a) Fluoride Day Tank Low-Low Level Alarm must be inactive for pump to operate.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Fault
 - b) PCS: Fault, Loss of Signal, Flow Deviation Alarm
- i. Fluoride Chemical Transfer Sequence
 - 1) General: Used for automated control of transferring chemical between tanks.
 - 2) Control:
 - a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
 - b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
 - (1) TRANSFER:
 - a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
 - d. Once both opened, the transfer pump shall operate until the Stop level is reached.

- e. Once the level is reached, both valves shall travel closed.
- f. Once either valve is closed, the transfer pump shall stop.
- g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
- h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
- i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
- j. All applicable equipment must not have any active alarms in order to initiate the transfer.

(2) RECIRC:

- a. The operator shall select a storage tank and enter a desired time duration setpoint.
- b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
- c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
- d. Once both opened, the transfer pump shall operate until the time duration has expired.
- e. Once time expires, both valves shall travel closed.
- f. Once either valve is closed, the transfer pump shall stop.
- g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
- h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
- i. All applicable equipment must not have any active alarms in order to initiate the sequence.

(3) DAY TANK FILL:

- a. The operator shall select the source storage tank and enter a Stop weight setpoint.
- b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
- c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
- d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
- e. Once the weight is reached, both valves shall travel closed.
- f. Once either valve is closed, the transfer pump shall stop.
- g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
- h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
- i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
- j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
- k. All applicable equipment must not have any active alarms in order to initiate the transfer.

- j. Fluoride Containment Area Wet Floor Switch
 - 1) General: Used to detect a Fluoride tank leak.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Fluoride Containment Area Wet Floor Switch Activated

14. HIGH SERVICE PUMPS

- a. High Service Pump 5
 - 1) General: Used to pump water into the water distribution system.
 - 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
 - b) VFD: The VFD speed can be manually adjusted utilizing the manual speed potentiometer or VFD HIM module at the VFD.
 - c) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of High Service Pump 5 via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop and adjust the speed of High Service Pump 5.
 - (2) AUTO: High Service Pump 5 shall be automatically controlled via PLC programming. High Service Pump 5 shall be incorporated into the existing High Service Pump control scheme.
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) VFD: Running, Stopped, Frequency, Amps, Volts
 - c) PCS: Remote, Running, Stopped, (2) Vibration Sensors, (2) Motor Bearing Temps, Frequency, Amps, Volts, VFD LOR Switch Position
 - 5) Alarms:
 - a) Local: General Alarm
 - b) VFD: VFD Fault Alarm
 - c) PCS: Motor High Temperature, (2) High Vibration Alarms, (2) High Bearing Temp Alarm, Low Suction Pressure, High Discharge Pressure, VFD Fault, Loss of Signal

15. EXISTING PROCESS CONTROL MODIFICATIONS

- a. Groundwater Wells and Pretreatment Systems
 - 1) General: Used to pump water to the plant and provide treatment upstream of the NF Building Softening process.

- 2) Control: Modify groundwater pumps level control to be based on Break Tank levels instead of Clearwell levels.
 - a) Operator shall have the ability to select Break Tank 1 or Break Tank 2 Level as control variable.

16. EMERGENCY POWER

- a. Automatic Transfer Switch
 - 1) General: Used to automatically transfer plant power to generator during a utility power outage.
 - 2) Control:
 - a) Local: Per manufacturer
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Generator running and Automatic Transfer Switch in the Emergency Source position will initiate step loading logic for loads to be sequentially started.
 - 4) Monitoring:
 - a) Local: Per manufacturer
 - b) PCS: Utility Source Available, Emergency Source Available, Utility Source Connected, Emergency Source Connected
 - 5) Alarms:
 - a) Local: Per manufacturer
 - b) PCS: Not in Auto
- b. Generator
 - 1) General: Used to supply emergency power to the plant during a utility power outage.
 - 2) Control:
 - a) Local: Per manufacturer
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Generator running and Automatic Transfer Switch in the Emergency Source position will initiate step loading logic for loads to be sequentially started.
 - 4) Monitoring:
 - a) Local: Per manufacturer
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Per manufacturer
 - b) PCS: General Alarm, Not in Auto

17. CRITICAL ALARMS

- a. General: Programming shall include the following as critical alarms. Critical alarms shall initiate a telephone call to designated personnel.
 - 1) Utility Power Failure
 - 2) PLC Failure Alarm
 - 3) Emergency NF Process Shutdown

3.2 EXAMINATION

- A. Verification of Conditions: Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.
- B. Discrepancies: In the event any discrepancies are discovered, immediately notify the Owner's Representative in writing. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3.3 PREPARATION

- A. Protection
 1. All equipment and materials shall be packed at the factory to protect each item from damage during shipment and storage.
 2. Provide blocking and cushioning materials to prevent damage during shipment.
 3. Panel mounted instruments and equipment to be installed inside enclosures, panels, or consoles shall be mounted and assembled at the panel manufacturer's facility.

3.4 INSTALLATION

- A. General: Install equipment, as indicated, with manufacturer's written instructions and with recognized industry practices.

3.5 FIELD QUALITY CONTROL

- A. Inspection: Provide for services of a qualified representative of the manufacturer to inspect and approve installation.
- B. Tests: Upon completion of all inspections, and prior to acceptance, perform field tests outlined in Division 40 Section "Plant Instrumentation and Control System General Requirements".
- C. Operational Demonstration: After completion of the field test, perform a 30-day operational demonstration as specified in Division 40 Section "Plant Instrumentation and Control System General Requirements".

3.6 DEMONSTRATION

- A. General: When all required tests have been performed and prior to final acceptance, the Contractor shall perform a 30-day operational demonstration in accordance with the requirements of Division 40 Section "Plant Instrumentation and Control System General Requirements".

3.7 EXTRA MATERIALS

- A. Spare Parts: The Contractor shall provide uninstalled spare parts to the Owner to facilitate proper maintenance and minimize downtime of the PLC system.
- B. Quantity: Provide spares for each type of module listed below equal to 10 percent of the total of each type used in the system rounded up to the next whole number.
 1. Processor Modules
 2. Power Supply
 3. Digital Input Modules

4. Digital Output Modules
5. Analog Input Modules
6. RTD Analog Input Modules
7. Analog Output Modules
8. Analog Input/Analog Output Modules
9. Flex I/O Modules
10. Flex I/O Module Terminal Blocks

C. Provide (6) OIT protective screen overlays.

D. Replacements: Any spare part used during the start-up, demonstration, and warranty period shall be replaced by the Contractor at no cost.

3.8 PLC SYSTEM TRAINING

A. General.

1. Provide a training course customized for the control system hardware.
2. Provide training on the operation and maintenance of the control system hardware.
3. Provide training manuals for each attendee plus two additional manuals in archival preservation at the project site.
4. Include the following in each manual.
 - a. An agenda
 - b. Defined objectives for each lesson.
5. Provide all equipment, materials, and supplies used in the training.
6. For guidance in planning the required instruction, assume that attendees will have a high school education or equivalent and basic electrical maintenance knowledge.

B. Location, duration, and schedule.

1. Teach the course at the project site.
2. Provide one day of training for five personnel designated by the Owner.
3. Conduct training after completion of the Contractor's field testing.

3.9 INPUT/OUTPUT SCHEDULE

A. Abbreviations

1. AI = Analog Input
2. AO = Analog Output
3. CPU = Processor
4. DI = Digital Input
5. DO = Digital Output
6. RTD = RTD Analog Input

B. Installed spare inputs and outputs (I/O): In addition to the I/O listed below, provide a minimum of 10 percent installed.

1. All SPARE I/O shall be wired to terminal blocks within the PLC enclosure.

END OF SECTION 40 9443

SECTION 40 9513

CONTROL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General:
 - 1. Drawings and general provisions of Contract.
 - 2. General and Supplementary Conditions and all Division 1 specification sections.
- B. Related Sections of Division 26.

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to install control panels and consoles in accordance with the Plans and as specified herein.

1.3 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with requirements of the National Electrical Code (NEC) and all other applicable federal, state, and local codes and regulatory requirements.
- B. Standards: Materials and workmanship shall conform to the following standards:
 - 1. National Electrical Manufacturers Association (NEMA).
 - 2. Institute of Electrical and Electronic Engineers (IEEE).
 - 3. American National Standards Institute (ANSI).
 - 4. National Fire Protection Association (NFPA).
 - 5. Underwriters' Laboratories (UL).
 - 6. Joint Industrial Council (JIC).
 - 7. International Society for Measurement and Control (ISA).

C. Qualifications

- 1. Manufacturer's Qualifications: Firms regularly engaged in the manufacture of control panels whose products have been in satisfactory use in similar service for not less than 5 years.
- 2. Installer's Qualifications: Firm with at least 5 years of successful installation experience on projects with materials and equipment similar to items specified herein.

1.4 SUBMITTALS

- A. General: Furnish manufacturer's product data for enclosures and all components.
- B. Materials List: Submit a bill of materials listing quantities, manufacturer's name, and catalog numbers.
- C. Wiring Diagrams: Submit wiring diagrams showing all connections for all equipment furnished or installed under this section.
 - 1. Elementary diagrams shall follow JIC standards.
 - 2. Instrument loop diagrams shall follow the ISA Standard S5.4.

3. Wire, terminal, and component labeling shall follow established facility conventions where applicable.
- D. Shop Drawings: Provide control panel layout drawings which follow JIC standards. Provide shop drawings for each control panel and console as follows:
1. Dimensional drawings of each enclosure and mounting panel.
 2. Scaled layout drawings identifying name and location of all components and nameplates.
 3. Mounting details including location of anchoring flanges, holes, and data on anchor bolt sizing and load-carrying capacity.
 4. Entry and exit locations of external wiring and conduit and equipment connections.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Storage and Protection: The Contractor shall store the items furnished under this section until they can be installed. Such storage shall meet the requirements of the manufacturer and be approved by the Owner. Use all means necessary to protect the material of this section before, during, and after installation, and to protect the installed work and materials of all other trades.

PART 2 - PRODUCTS

2.1 ENCLOSURES

- A. Enclosure shall be NEMA 4X, unless otherwise specified or shown on the Drawings.
1. Hinged Door Enclosures: Material of construction shall be fiberglass, 304 stainless steel or as shown on the Drawings.
 - a. Manufacturer: Hoffman Enclosures, Inc.; Saginaw Control and Engineering; Stahlin Enclosures; or approved equal.
 2. Fabricated control panel shall be UL508A labeled.

2.2 COMPONENTS

- A. As specified in related sections.
- B. Miscellaneous Equipment
1. Slotted plastic wiring ducts with snap-on covers.
 2. Nylon spiral wrap wiring sheaths.
 3. Nylon cable ties with screw anchors.
 4. Nameplates as specified in Division 26. Nomenclature as shown on the Drawings.
 5. Stainless steel screws, fasteners, and miscellaneous hardware, unless otherwise noted.
- C. Corrosion Inhibitor Device: Shall be provided for all control enclosures. Provide one (1) unit per 5 cubic feet of volume. Provide one (1) replacement unit for each inhibitor device installed. Devices shall be Hoffman A-HCI 10E or approved equal. Install and date mark while enclosure is in fabricator's shop.
- D. Provide thermostatically controlled electric heater in each enclosure for condensation prevention. Heater shall be sized for 40°F temperature rise above ambient, based on enclosure dimensions. Locate heater in compliance with manufacturer recommendations.
- E. Surge Protection

1. Provide surge protection for all communication, analog and digital signals which the cable/conductor(s) enter from outside or underground. These signals include, but are not limited to, all 120VAC digital inputs and 24VDC analog inputs.
 - a. Surge protection devices shall be type Category C as defined by IEEE C62.41, and consist of a base and a replaceable plug-in surge element.
 2. Provide surge protection on all other PLC inputs, PLC outputs, relays and all other instrumentation and control system components as recommended by the manufacturer of each device.
 3. Surge protection device shall include a visual indicator for “fault/no protection” indication.
 4. Manufacturer: Pheonix Contact, Edco, Thor Systems or approved equal.
- F. Power Supplies
1. Provide power supplies as required for the various components and functions of this contract.
 2. Required Features:
 - a. Provide power for 2-wire transmitter loops using 4-20mA dc current signals.
 - b. Input Voltage: 115 VAC.
 - c. Output Voltage: 24V to 45V DC, or 12V to 16V DC, as required.
 - d. Voltage Regulation: ± 5 percent.
 - e. Fusing: 115 VAC line.
 - f. Loop circuits: Suitable for 1 loop circuit only.
 - g. Mounting: Suitable for wall mounting inside of panel enclosure.
 3. Manufacturers:
 - a. Allen-Bradley Bulletin 1606.
 - b. Moore Industries.
 - c. Or approved equal.
- G. Lighting Kit: Provide a 120VAC, fluorescent light fixture inside the enclosure. Fixture shall use 20 watt lamps, minimum. Each light shall include a manual on/off toggle switch and a 120VAC convenience outlet.
- H. Uninterruptible Power Supply (UPS).
1. General: Provide a UPS to supply power to the control panel’s associated PLC, radio, and internal power supplies during failure of normal power. Maintain battery power to load for 30 minute duration with "no breaks," or interruptions. Upon return of normal ac power, automatically equalize recharge batteries and revert to floating condition.
 2. Enclosures: Free standing enclosures sized to house both the batteries and the electronics. DIN rail mounted units may be used when loads/battery time comply with specification requirements.
 3. Rectifier/Charger: Solid state rectifiers/charger sized to supply dc power to both the batteries and the static inverter. Equip with automatic shutdown to prevent discharging the batteries completely.
 4. Static Inverter: Single phase solid-state static inverter to supply regulated ac output.
 5. Batteries: Sealed, maintenance-free lead acid batteries.
 6. Detachable line cord and NEMA 5-20R output receptacles.
 7. Available Manufacturers: Subject to compliance with requirements, manufacturers offering UPS systems which may be incorporated in the work include, but are not limited to, the following:
 - a. APC
 - b. Liebert

c. Phoenix Contact

I. Network Access Port

1. For enclosures that include a programmable logic controller (PLC), provide a door mounted GFCI 120VAC duplex power outlet, rated 3A minimum, with front door mounted RJ-45 Ethernet jack connected to the PLC network.
2. Provide a nameplate engraved with "For Programming Use Only".
3. NEMA 4X rated with hinged cover and securing latch
4. Power external outlet from a dedicated circuit breaker.
5. Provide CAT6 Ethernet cable internally from port to network switch.
6. Manufacturer:
 - a. Grace Engineered Products, Inc
 - b. Phoenix Contact
 - c. Or approved equal

J. Miscellaneous Equipment

1. Slotted plastic wiring ducts with snap-on covers.
2. Nylon spiral wrap wiring sheaths.
3. Nylon cable ties with screw anchors.
4. Nameplates as specified in Division 26 Section "Electrical Identification", and as shown on the Plans.
5. Stainless steel screws, fasteners, and miscellaneous hardware unless otherwise noted.

2.3 SHOP FABRICATION

A. Fully assemble and test each panel at the factory prior to shipment.

1. Ensure that all wires and cables are securely connected.
2. Ensure all labels and nameplates are easily readable.
3. Perform 100% continuity checks.
4. Provide a temporary power source (120VAC), and check voltage on all applicable circuits, including all 24VDC power supplies.
5. Provide documents and drawings of the completed testing procedures.
6. Complete the fabrication and testing to the satisfaction of the Owner or its designee.
7. Factory Acceptance Test (FAT) – At the discretion of the Owner or its designee, fabricated panels may be subjected to inspection and testing prior to arrival at site. The FAT may be a prerequisite for acceptance. The Contractor shall plan for personnel to arrive at the fabricator's facility for the FAT. The Contractor shall also allow provisions for a Contractor's representative and a technician to assist in testing. Temporary power and networking should also be expected as part of the FAT procedure.
 - a. A punch list shall be generated by the FAT personnel for any modifications needed prior to shipment to the Owner's facility. Successful completion of the FAT is a prerequisite for delivery to the Owner's facility. All FAT punch list items shall be resolved.

B. As a minimum, test all wiring circuits for conductivity and demonstrate that all specified functions can be performed.

C. Identify all components with laminated plastic nameplates.

D. Provide all devices, electrical hardware, wiring, support hardware, fasteners and other components required to make the control enclosures complete and workable units.

- E. Estimated Size: Minimum sizes are shown on the Drawings. Contractor shall furnish enclosures of the size and quantity required to house the manufacturers' equipment supplied and all other electrical components installed in the enclosures.
- F. Provide stainless steel quick-release latching clamps on three sides of each door and pad-lockable hasp and staple on all panels.
- G. All hardware on the enclosures including hinges, pins, clamps, nuts, bolts, washers, screws, etc., shall be stainless steel.
- H. Design panels so that conduits and wiring enter and leave through the bottom of the enclosures, unless noted otherwise.
- I. Component Arrangement
 - 1. Group all like components.
 - 2. Place all internal components on sub-panels.
 - 3. Arrange all components to allow easy access for connections and service, and to allow removal without affecting other components.
 - 4. Provide a minimum of 2.5" from device terminals to edge of closest wiring duct.
- J. Component Installation
 - 1. Make all panel cutouts carefully and leave no visible gaps between components and panels.
 - 2. Mount all components plumb and square.
 - 3. Attach all components and nameplates with stainless steel machine screws into drilled and tapped holes.
 - 4. Support and restrain all components to prevent movement.
 - 5. Attach all relays to mounting strips or rails.
- K. Wiring
 - 1. Route wiring horizontally or vertically.
 - 2. Protect wiring to door-mounted devices with spiral nylon sheath.
 - 3. Separate alternating current (ac) and direct current (dc) wiring a minimum of 4 inches. Separate AC and DC buses.
 - 4. All DC (+) wiring shall be separately fused per device.
 - 5. Label all wires at each termination with a unique number.
 - 6. Label each terminal with a unique number.
 - 7. Terminate all external wiring on terminal blocks.
 - 8. Terminate all internal wiring on terminal blocks or device terminals. Device neutrals shall not be daisy-chained between devices.
 - 9. Group all externally powered wiring and terminate on knife disconnect isolating terminal blocks.
 - 10. Terminate all wiring to devices powered from the control panel on fused terminal blocks.
 - 11. Fused terminal blocks shall include LED blown fuse indication.
 - 12. Color code all internal wiring as follows:
 - a. Line Voltage ac Power and Control: Black.
 - b. AC Control Circuits: Red.
 - c. DC Wiring: Blue (positive), Blue with White Stripe (negative).
 - d. Externally Powered Wiring: Yellow.
 - e. Neutral Conductors: White.
 - f. Equipment Grounding Conductors: Green.

13. Route all wiring on sub-panels through plastic wiring ducts with removable covers. Wiring duct shall not be filled over 50%, including spares.
14. Support all wiring to prevent movement or sagging.
15. Secure all cable ties with bolted or screwed mounting plates.
16. Provide a warning sign, placed in a conspicuous location in the interior of the panel, identifying yellow wiring as being powered from an external source and warning that disconnecting power to the panel will not de-energize externally powered wiring.

L. Panel Grounding

1. Provide ground studs factory welded to the enclosure and the enclosure door.
2. Provide tinned copper braided ground strap between enclosure and door.
3. Provide a minimum #8 AWG ground wire from sub-panel to enclosure mounting stud.
4. Ground control power transformer secondary directly to sub-panel immediately adjacent to transformer.
5. Where signal cable shields are to be grounded in the control panel, connect to the equipment ground bus.
6. Connect all DC commons to the low-level isolated dc ground bus.

2.4 EXTRA MATERIALS

- A. Spare Parts: The Contractor shall provide uninstalled spare parts to the Owner to facilitate proper maintenance and minimize downtime of the PLC system.
1. Quantity: Provide spares for each type listed below equal to 10 percent of the total of each type used in the system rounded up to the next whole number.
 - a. Control Relay
 - b. Power Supply
 - c. Pilot Light
 - d. Selector Switch
 - e. Pushbutton
 - f. Fuses
 - g. Terminal Block
 2. Replacements: Any spare part used during the start-up, demonstration, and warranty period shall be replaced by the Contractor at no additional cost.

PART 3 - EXECUTION

3.1 INSTALLATION:

- A. General: Install equipment as indicated, in accordance with manufacturer's written instructions, and with recognized industry practices.
- B. Examination
1. Verification of Conditions: Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.
 2. Discrepancies: In the event any discrepancies are discovered, immediately notify the Owner's Representative in writing. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.
- C. Preparation
1. Protection.

- a. All equipment and materials shall be packed at the factory to protect each item from damage during shipment and storage.
 - b. Provide blocking and cushioning materials to prevent damage during shipment.
 - c. Provide temporary lifting lugs on shipping package as needed.
 - d. Include approximately 1 pint of touch-up paint for each finish color in shipment.
2. Surface Preparation: The work shall be carefully laid out in advance. Where cutting, drilling, etc., of floors, walls, ceilings, or other surfaces is necessary, this work shall be carefully done. Any damage to building, piping, or equipment shall be repaired by skilled mechanics of the trades involved, and at no additional cost to the Owner.

D. Application

1. Enclosure, Cabinets, Console Installation.
 - a. Locate as shown on the contract drawings. Freestanding enclosures and consoles require an Electrical Equipment Pad provided and installed by this Contractor. Refer to detail on Drawings.
 - b. Floor-mounted control panels shall be installed utilizing all stainless steel hardware consisting of concrete anchor and machine bolt assembly.
 - c. Wall-mounted panels shall be offset from walls with standoffs. Wall-mounted panels requiring freestanding mounting shall be supported on stainless steel strut with cross bracing and stainless steel hardware.
 - d. Seal all conduit entrances watertight.

3.2 FIELD QUALITY CONTROL

- A. Tests: Upon completion of all inspections and prior to acceptance by the Owner, perform the field tests outlined in Division 40 Section "Instrumentation – General".
- B. Inspection: Upon completion of this portion of the work, the Contractor shall provide for the services of a qualified representative of the manufacturer to inspect and approve the installation.

END OF SECTION 40 9513

(THIS PAGE INTENTIONALLY LEFT BLANK)

SECTION 40 9553

NETWORK DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General:
 - 1. Drawings and general provisions of Contract.
 - 2. General and Supplementary Conditions and all Division 1 specification sections.
- B. Related Sections: Refer to Division 40 9XXX Sections for additional requirements related to this section.

1.2 DESCRIPTION OF WORK

- A. General: The Contractor shall provide the labor, tools, equipment, and materials necessary to install network switches in accordance with the plans and as specified herein.
- B. Types: The types of equipment specified in this section include the following.
 - 1. Ethernet Switch
 - 2. Ethernet Media Converter
 - 3. DIN-rail Fiber Patch Panel

1.3 DEFINITIONS

- A. Abbreviations
 - 1. AHJ. Authority having jurisdiction.
 - 2. NRTL. Nationally recognized testing laboratory.

1.4 SUBMITTALS

- A. General
 - 1. Comply with the requirements of Division 01 Section "Submittal Procedures".
 - 2. Submit information as described below.
 - 3. Provide all information necessary to determine compliance with the Plans and specifications.
- B. Product Data
 - 1. Manufacturer's product data sheets, delete or cross out non-applicable information.
- C. Quality Control Submittals
 - 1. Field test reports. Submit certified copies of the field test reports.
 - 2. Manufacturer's instructions: Submit manufacturer's current installation instructions.
- D. Contract Closeout Submittals: Operation and maintenance (O&M) data

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS – GENERAL

- A. General
 - 1. Provide new and unused products of current manufacture.
 - 2. Provide products free from defects affecting performance.
 - 3. All units of the same type shall be from the same manufacturer.
- B. Listing and Labeling
 - 1. Provide UL listed and labeled products.
 - 2. Products not bearing an NRTL label must be pre-approved in writing by the AHJ.

2.2 ETHERNET SWITCH

- A. General: Provide an Ethernet switch for segment connection to the network backbone for area PLCs and operator workstations and as shown on the Drawings.
- B. Features
 - 1. Minimum of (2) send/receive 100Base-FX fiber optic ports
 - 2. Minimum of (8) 10/100Base-TX (RJ-45) ports
 - 3. Per-port Status Indicators
 - a. Link Integrity
 - b. Disabled
 - c. Activity
 - d. Speed
 - e. Half/Full Duplex
 - 4. Alarm Relay: 1A @ 30VDC
 - 5. Memory Card
 - 6. Management console port:
 - a. Mini USB cable (driver provided)
 - 7. Power Requirements: 12-48VDC
- C. Performance Requirements:
 - 1. Support spanning tree protocol
 - 2. Support ring topology
 - 3. Switch Management”
 - a. Support Simple Network Management Protocol (SNMP)
 - b. Bridging Management Information Base
 - c. Remote Monitoring (RMON) control
 - 4. Comply to IEEE 802.3x Full-Duplex on 10Base-T and 100Base-T
 - 5. Full performance from 32 to 113°F, 5-95% humidity non-condensing
- D. Small Form Factor Pluggable Module (SFP):
 - 1. SFP module shall be provided as integral part of the Ethernet switch to provide connection into fiber optic media as shown on the Drawings.
 - 2. Support for IEEE 802.3z, 1000BASE-SX standard for 1Gbps data transmission rate.
- E. Product Manufacturer and Model
 - 1. Stratix 5700 Switch, 1783-BMS10CL or equivalent latest compatible series, as manufactured by Allen-Bradley

2.3 ETHERNET MEDIA CONVERTER

- A. Description: Converts 10/100Base-T(X) Ethernet media from copper to fiber optic.

B. Features

1. Converts to utilized fiber optic cable type as indicated on the Drawings.
2. (1) 10/100MBit/s RJ45 Port
3. (1) 100MBit/s SC-FX Port
4. Fiber wavelength shall be 1300nm
5. Auto-negotiation
6. Integrated MDI/MDIX changeover
7. Status and diagnostic indicators on device
8. Redundant power supply capable
9. DIN rail mounted
10. Conforms to IEEE 802.3
11. Input power: 24VDC
12. Operating Temperature Range: 32degF – 131degF
13. Humidity: 30-95%, non-condensing

C. Manufacturers: Subject to compliance, provide products manufactured by one of the following:

1. Phoenix Contact
2. Hirschmann
3. Or approved equal.

2.4 DIN-RAIL FIBER PATCH PANEL

A. General: Shall be designed to manage and organize fiber optic cables to and from the equipment or cabling plant.

1. Single panel housing fiber optic enclosure adapted for DIN-rail mounting
2. Protect fiber optic connections for patching or splicing requirements
3. Accommodate up to 12 fibers per enclosure and shall be constructed of steel
4. Include removable covers and pass-through holes
5. Model and Manufacturer:
 - a. SPH-01P, enclosure by Corning
 - b. CCH-CP12-15T, adapter plate by Corning

PART 3 - EXECUTION

3.1 INSTALLATION

A. General

1. Conform to manufacturer recommended installation guidelines.
2. Mount the Ethernet switches in enclosures indicated on the Drawings.

B. Physical Network Architecture

1. Physically configure the plant-wide LAN system as shown on the Drawings.
2. Some workstations will be equipped with two network interface cards (NIC) for connection to both networks.
3. IP addresses shall be assigned by Owner for all equipment connected to the plant networks.

3.2 FIELD QUALITY CONTROL

A. Field Test

1. Conduct testing after all connections are made.

2. Test the switches for proper operation by simulating fault conditions at the input terminals of the LAN equipment.
3. Correct any malfunction or error in the designed performance.
4. Check the operation after all LAN equipment has been wired by manually activating the inputs with testing devices that simulate network traffic.

B. Manufacturer Field Services

1. Provide the services of a factory-trained manufacturer representative to configure and start-up equipment specified under this Section.
2. Certify in writing that that the equipment has been installed, configured, and tested in accordance with manufacturer recommendations.

3.3 EXTRA MATERIALS

A. Spare Parts: The Contractor shall provide uninstalled spare parts to the Owner to facilitate proper maintenance and minimize downtime of the PLC system.

1. Quantity: Provide spares for each type listed below equal to 10 percent of the total of each type used in the system rounded up to the next whole number.
 - a. Ethernet Switch
 - b. Ethernet Media Converter
 - c. DIN-rail Fiber Patch Panel
2. Replacements: Any spare part used during the start-up, demonstration, and warranty period shall be replaced by the Contractor at no additional cost.

END OF SECTION 40 9553

SECTION 46 6340

NANOFILTRATION MEMBRANE EQUIPMENT

PART 1 - GENERAL

1.1 REFERENCE

- A. All applicable requirements of other portions of the Contract Documents apply to the work of this Section, including but not limited to Division 01 General Requirements.

1.2 DESCRIPTION OF WORK

- A. OEM and Contractor Scope
 - 1. The OEM's scope shall include all work after the inlet flange connection on the skid and shall end at the flanged connections for the permeate, concentrate, and cleaning connections after the various control, isolation, and block and bleed valves. NF feed pumps will be provided by Contractor (off-skid).
- B. The system provided under this specification shall be complete and operable in all respects including, but not limited to connections to other systems and facilities, component and system tests, calibration, alignment, and adjustments as necessary to place the system in operation to perform its intended function.
- C. The Contractor shall coordinate scheduling, delivery, and shall unload, store, protect equipment, and install the equipment.
- D. Connections of electrical, control, and instrumentation components shall be furnished and installed as specified in Division 26 and 409XXX.

1.3 RELATED WORK SPECIFIED ELSEWHERE

- A. Division 09, Section "High Performance Coatings."
- B. Division 26—Electrical.
- C. Division 40—Process Integration.

1.4 QUALITY ASSURANCE

- A. The skid components shall be manufactured from all new materials and equipment.
- B. The Owner and/or Engineer shall be provided access at any time to inspect or observe all equipment prior to shipment to the site.
- C. All valves, actuators, flow meters, and instrumentation shall be of the same type and from the same manufacturer.

1.5 SUBMITTALS

- A. All submittals shall conform completely to the requirements of the Contract Documents, including all requirements set forth in Division 01 General Requirements.
- B. Manufacturer shall submit P&IDs for all equipment furnished under this section to the Engineer for approval, prior to submittal of shop drawings. Once P&IDs have been approved, Manufacturer shall submit shop drawings to the Engineer for approval, in accordance with the Contract Documents, for equipment furnished under this section.
- C. Manufacturer's product data including but not limited to valves pressure vessels, end assembly, piping, couplings, membrane elements, instrumentation, controls, and electrical components. Data sheets shall include materials of construction for all hardware used to assemble the skids.
- D. Submit process design information detailing the number of stages, number of pressure vessels per stage, flux rate per stage and for the entire membrane train, design feed pressures, design product water quality parameters (based on the projected feed water quality), number of membrane elements per pressure vessel, general information on the proposed membrane element, specific instructions on membrane train construction based on membrane system configuration, piping plan and sections, wiring plan, wiring diagram, control panel layout, sample panel layout, and other relevant information.
- E. Assembly and installation drawings including arrangement, layout, and dimensions of all components of the membrane trains, including the control panel, sample panel, piping connections and membrane element loading sequence.
- F. Factory acceptance testing results.
- G. The OEM's printed instructions for the handling, delivery, storage, and installation of the membrane system components.
- H. Operations and Maintenance (O&M) Manual
 - 1. The OEM shall prepare a comprehensive operation and maintenance (O&M) manual for the system specified as part of this Contract. The manual shall include information on the operation and maintenance of the individual components of the system, and on the operation of the overall package. O&M Manual shall be in accordance with Division 01, Section "Operation and Maintenance Data".
- I. The OEM shall also provide personnel training prior to startup, and field assistance during the system checkout, startup, and commissioning.

1.6 SPARE PARTS

- A. Provide two spare grooved-end, flexible-type coupling assemblies for each size and type supplied on the membrane skid assembly.
- B. Provide two pressure vessel repair kits, consisting of all O-rings and seals and clips required for the rebuilding of one end closure assembly.
- C. Provide four permeate orifice plugs, sized to simulate hydraulic design of the membranes.

1.7 HANDLING, DELIVERY, AND STORAGE

- A. The OEM shall fabricate and deliver all components of the NF System to the site.
- B. All components shall be properly crated and stored at the job site until ready for installation. All components shall be kept clean, dry, and protected from freezing.
- C. Weight, handling instructions, type of storage required, and instructions for protective maintenance during storage shall be included with each shipment to the job site.

1.8 WARRANTY

- A. The membrane manufacturer shall guarantee the membrane performance as specified herein during the performance warranty period as described below:
 - 1. Performance Warranty Period: 1 year full warranty plus 2 additional year warranty pro-rated.
- B. If the performance requirements specified (permeate water quality and feed pressure) are not met the OEM shall replace all membranes at no cost to the Owner until the requirements are met.
- C. Performance Requirements:
 - 1. Performance Requirements are included in the NF Membrane Equipment Schedule.

PART 2 - PRODUCTS

2.1 GENERAL

- A. NF Skid design information and dimensions are included the NF Membrane Equipment Schedule.
- B. Membranes
 - 1. Provide interconnectors, O-rings, and brine seals required for installation in specified pressure vessels. Elements shall be non-telescoping, non-flexing, and leak-free.
 - 2. Spiral Wound Thin-Film Composite.
 - 3. Nominal Diameter: 8 inches.
 - 4. Nominal Length: 40 inches.
 - 5. Nominal Active Membrane Area: 400 square feet.
 - 6. Seal Materials: Brine seals and O-rings shall be manufactured from EPDM.
 - 7. Feed Brine Spacer Thickness: 34 mil.
 - 8. Manufacturer/Model:
 - a. DOW/NF90.
- C. Manufacturers
 - 1. Wigen Water Technologies
 - 2. H2O Innovation
 - 3. Harn

2.2 SKID ASSEMBLY

- A. Material
 - 1. Base Bid: Epoxy Coated Carbon Steel or FRP
 - 2. Alternate Bid: 304 SST

- B. Frame/Supports
 - 1. Fabricate frame and supports using material as noted above.
 - 2. If onsite erection or assembly of the frames is required, OEM shall certify that the skids have been constructed correctly.
 - 3. All other supports and hardware on the skids shall be either 304 SST or FRP.
 - 4. Frames shall be designed and stamped by registered professional engineer, and all calculations submitted in accordance with Division 1 Section "Submittals".
- C. Anchor Bolts
 - 1. Contractor shall provide 316 SST expansion bolts to anchor the skid to the equipment pad below. OEM to coordinate with Drawings to determine anchor bolt locations.
- D. Accessories
 - 1. Locate control panel, sample panel, pressure transmitters, flow transmitters, conductivity meters, and other instruments for each skid where indicated on the drawings, and no less than 2.5 feet no more than 5 feet above floor level.

2.3 FEED, INTERSTAGE, CONCENTRATE, AND PERMEATE PIPING

- A. All high pressure feed, interstate, and concentrate piping shall be 316 stainless steel, schedule 10S conforming to the requirements of Division 40, Section "Process Piping."
 - 1. All stainless steel piping associated with the membrane skid shall be stress relieved and passivated. Passivation shall be continued to a bright metal finish.
 - 2. All stainless steel piping shall be thoroughly cleaned inside and out, disinfected, and all scale and welding slag removed.
 - 3. All piping shall be designed for a working pressure no less than the shutoff head of the NF Feed Pumps being provided (OEM to coordinate with Contractor and NF Feed Pump Supplier).
 - 4. All stainless steel spool pieces shall be pressure tested to 1.5 times the rated working pressure of the pipe. Pressure testing shall conform to the requirements set forth in Division 40 Section "Process Piping". Cut or roll-groove as appropriate to the pipe material, wall thickness, pressure, size, and method of joining. Use Victaulic "RX" rolls for grooving Schedule 10 stainless steel pipe.
- B. All other piping shall be Schedule 80 PVC conforming to the requirements of Division 40, Section "Process Piping."
- C. Vessel Connections
 - 1. Feed, Interstage, and Concentrate Connections: Side-ported pressure vessels shall be directly connected to their respective manifolds using grooved-end flexible pipe couplings.
- D. Grooved-End Flexible Pipe Couplings
 - 1. Housings: 304 SST
 - 2. Gaskets: EPDM rubber, suitable for hot and cold water service.
 - 3. Bolts / nuts: Round head, square neck, type 316 SST bolts and heavy hex type 316 SST nuts. Washers shall be heavy pattern 316 SST.
 - 4. Pressure Rating
 - a. < 2-inches: 600 psi.
 - b. 2-inches and larger: 300 psi.
 - 5. Manufacturer: Victaulic Style 489, Piedmont Style K, or Engineer Approved Equal.

- a. All grooved components shall be of one manufacturer. Installation shall be in strict accordance with the coupling manufacturer's latest published instructions.
- E. OEM shall carefully review drawings for coordination on skid connection locations. Skid connection locations have been located for coordination with the Architectural and Structural Layout of the Building. Alternate connection points may not be acceptable. No additional costs will be paid by the Owner for piping revisions that are required for alternate connection points.
- F. Manifolds and piping shall be securely supported from the vessel support structure. Manifold support stanchions that are welded to the manifold must be the same material and finish as the manifold. For side-ported pressure vessels, provision must be made for either the feed or concentrate manifold of each stage to allow for movement of the manifold with the vessel side ports as vessel length expands under pressure. Manifolds shall not rely upon mechanical-type coupling joints to support coupled sections of manifolds.

2.4 SIDE PORTED PRESSURE VESSELS

- A. Pressure vessels shall be as specified in Division 46 Section "Side Ported Pressure Vessels".

2.5 VALVES

- A. Valves and actuators shall conform to the requirements of Division 40 Section "Process Valves, Gates and, Accessories."

2.6 INSTRUMENTATION

- A. Flow Measurement
 - 1. Magnetic Flowmeters
 - a. In accordance with Division 40, Section "Primary Sensors and Field Instruments."
 - 2. Paddlewheel Flowmeter
 - a. Manufacturer/Model: Seametrics IP800 Series or Engineer Approved Equal.
 - b. Materials: Cast Aluminum housing, PVC sensor, Viton O-ring, PVDF rotor, and Kynar shaft.
 - c. Features: 4-20 mA output, loop powered.
- B. Pressure Measurement
 - 1. Pressure Transmitters and Switches
 - a. In accordance with Division 40, Section "Primary Sensors and Field Instruments".
 - 2. Pressure Switches
 - a. In accordance with Division 40, Section "Primary Sensors and Field Instruments".
 - 3. Pressure Gauges
 - a. In accordance with Division 40, Section "Process Valves, Gates, & Accessories".
- C. Analyzers
 - 1. ORP
 - a. In accordance with Division 40, Section "Primary Sensors and Field Instruments".
 - 2. Conductivity
 - a. In accordance with Division 40, Section "Primary Sensors and Field Instruments".
 - 3. Temperature
 - a. Moore Industries TDZ with D2LC housing or Engineer Approved Equal.

2.7 SAMPLE PANEL

- A. There shall be a sample panel on each skid made of HDPE or FRP. The panel shall be mounted with corrosion resistant clamps (316 SST) similar to those used to attach the pressure vessels to the support structure.
- B. The sample panel shall be fitted with angle-pattern, 1/4-inch-turn, black PVC valves, installed to panel with Swagelock backhead tube fitting SS-400-71-4 for 1/4-inch OD tubing or Engineer Approved Equal.
 - 1. There shall be one sample valve for the permeate for each pressure vessel on the skid, plus valves for 1st stage feed, interstage, concentrate, 1st stage total permeate, 2nd stage total permeate, and total permeate. Provide a label for each sample valve corresponding to the location from which the sample is drawn.
- C. The sample panel shall be equipped with a 6-inch deep x 6-inch wide trough for each row of sample valves, of the same material as the panel, which shall be drained by a 2-inch PVC pipe. Route drain pipe to trench drain located beneath each skid as shown on the drawings. Provide slope in trough to properly drain sample water. Provide adequate clearance for a one-gallon milk jug between the sample valves and the trough.
- D. Sample tubing shall be 1/4-inch OD polyethylene, with a minimum working pressure of 300 psi at 75 deg F. Sample tubing shall be black. Tubing shall be Manufactured by Imperial Eastman Division, Imperial Clevite, Inc., or Engineer Approved Equal.
- E. Tubing shall be neatly arranged and bundled where possible. Bundles shall be retained with nylon tywraps, or grouped in PVC conduit with properly arranged openings for tubing. Label sample taps according to stage and sequential number.

2.8 WET PANEL

- A. A Wet Panel shall be provided for each skid made of HDPE or FRP board, floor-mounted where indicated by the Drawings, adjacent to each skid. The panel shall be mounted on FRP supports with corrosion resistant (316 SST) clamps similar to those used to attach the pressure vessels to the support structure. The Skid Wet Panel may be combined with the Skid Sample Panel.
- B. The Wet Panel shall incorporate all instrumentation and control components local to each train except for those that must be installed inline, or otherwise indicated in the PID drawings. The panel shall include pressure gauges, transmitters, indicators, analytical instruments, and other components indicated on the Drawings. The panel shall consist of a flat panel for gauges, analytical sensor cells, and other surface mounted components; a NEMA 4X enclosure for mounting analytical transmitters, electronic displays, and components.
- C. Skid shall include drain piping from the wet panel to the trench drain beneath each skid as shown on the drawings.

2.9 MCS SYSTEM

- A. MCS Tanks(s)

1. MCS Tank(s) are specified in Division 46, Section “Polyethylene Chemical Storage Tanks and Appurtenances”. These tanks to be provided by the Contractor. OEM to coordinate with Contractor and MCS Tank Supplier.
- B. Piping
1. MCS Piping is specified in Division 40 Section “Process Piping”. MCS piping shall be provided and assembled by the Contractor. Skidded MCS systems are not acceptable.
- C. Valves
1. MCS valves are specified in Division 40, Section “Process Valves, Gates, and Accessories”. MCS valves shall be provided by the Contractor. OEM to coordinate with Contractor and MCS Valve Supplier.
- D. Pump(s)
1. MCS Pump(s) are specified in Division 43, Section “Horizontal End Suction Pumps”. These pumps shall be provided by the Contractor. OEM to coordinate with Contractor and MCS Pump Supplier.
- E. Cartridge Filter Housing(s)
1. MCS Cartridge Filter Housing(s) are specified in Division 44, Section “Cartridge Filters and Appurtenances”. Cartridge filter housing(s) shall be supplied by the Contractor. OEM to coordinate with Contractor and Cartridge Filter Housing Supplier.
- F. Instrumentation/Accessories
1. MCS System instrumentation and accessories shall be provided by the OEM. OEM to coordinate with Contractor and Instrumentation Supplier. Conduit and wiring between instrumentation and MCS shall be provided by OEM. Conduit and wiring shall comply with Division 26 and 409XXX series specifications.
- G. Water Heaters:
1. OEM shall provide the heaters. OEM to coordinate with MCS Tank Supplier.
 2. Sizes: Per the equipment schedule.
 3. Material: 304 SST flange and Incoloy sheath.
 4. Electrical Characteristics: 480V, 3 phase, cold section first 10 inches. Include thermostat.
 5. The heater shall have a maximum temperature thermostat switch to prevent excessive heating and damage to the tank.
 6. Installation: Per the manufacturer’s recommendations.
 7. Manufacturer: Indeco, Chromalox, or Engineer Approved Equal.
- 2.10 PERMEATE FLUSH SYSTEM
- A. Permeate Flush System (PFS): OEM shall provide the permeate flush system (where indicated) which shall include tank(s), pump(s), valves, meters, and controls as indicated on the drawings.
- B. Permeate Flush Tanks(s)
1. Permeate Flush Tank(s) are specified in Division 46, Section “Polyethylene Chemical Storage Tanks and Appurtenances”. These tanks to be provided by the Contractor. OEM to coordinate with Contractor and Permeate Flush Tank Supplier.
- C. Piping

1. Permeate Flush Piping is specified in Division 40 Section "Process Piping". MCS piping shall be provided and assembled by the Contractor. Skidded Permeate Flush systems are not acceptable.

D. Valves

1. Permeate Flush valves are specified in Division 40, Section "Process Valves, Gates, and Accessories". Permeate Flush valves shall be provided by the Contractor. OEM to coordinate with Permeate Flush Valve Supplier.

E. Pump(s)

1. Permeate Flush Pump(s) are specified in Division 43, Section "Horizontal End Suction Pumps". These pumps shall be provided by the Contractor.

F. Instrumentation/Accessories

1. Permeate Flush System instrumentation and accessories shall be provided by the OEM.

2.11 ACCESSORIES

A. SDI Test Apparatus

1. Provide and install one silt density index (SDI) test apparatus for each array at the sample panel.
2. SDI test apparatus shall conform to the requirements of ASTM D4189.
3. Provide 500 filters with each apparatus.

2.12 IDENTIFICATION

A. Identify all equipment per Division 40 Section "Process Valves, Gates, and Accessories".

B. Identification Schedule

1. Identify all valves on each skid. Valve numbers are listed in the valve schedule.
2. Identify all piping using the language indicated on the drawings.
3. For cleaning connections, provide placards mounted on the piping showing and describing the valve settings for cleaning both stages.
4. Identify each pressure vessel. Locate the label on the side of the pressure vessel facing the sample sink and at the front of the skid. Pressure vessel numbering shall correspond to the sample valve numbering.
5. Identify each pressure gauge, transmitter, flow element, analytical element, and all other pieces of equipment. Tag shall be descriptive of the equipment, i.e. "1ST STAGE FEED PRESSURE".

2.13 ELECTRICAL

A. Refer to Division 26 - Electrical for Electrical Requirements.

B. Conduit

1. All on skid electrical and control conduits shall be schedule 80 PVC conduit in accordance with Division 26, Section "Raceway."

2.14 CONTROL PANELS

A. OEM shall provide the following control panels:

1. NF Skids Master Control Panel (NF-MCP)
 2. NF Skid Control Panels (NF1, NF2, NF3, etc....)
 3. NF MCS Control Panel (MCS-CP)
- B. Control Panels and components shall be in accordance with Division 40, Section 409XXX series and as shown on the drawings.
- C. MCS Control Panel (NF-MCSCP)
1. Provide VFDs for each MCS Pump (MCSP-1 and MCSP-2) and Permeate Flush Pump (PFP-1).
 - a. VFDs shall be in accordance with Division 26, Section “Variable Frequency Drives”.
 2. Provide local on/off switches for operation of the heaters.
- D. Provide spare parts for control panel components as specified in Section 409XXX series.

2.15 CONTROLS

- A. Provide controls for all elements scope supplied. All instrumentation required to control and monitor the operation of the equipment shall be provided including all PLC and OIT programming for all supplied equipment.
- B. OEM shall control the NF Feed Pumps (NFFPs).
1. There will be one (1) feed pump for each NF skid.
 2. NF feed pumps are VFD driven.
 3. NF-MCP shall control the VFD to slowly adjust the pump flow rate to desired setpoint.
- C. Provide an electronic copy of the software on a USB jump drive to allow the customer to reconfigure the program. The software provided to the customer shall be the “As-Built” version of the operating program that includes all start up and on-site changes that were made to the original program.
- D. Control components, where specified within this section, shall be provided under this section.
- E. The equipment specified under this section shall operate manually/automatically as shown on the drawings and specified in Section 409XXX. Any additional materials of equipment required by this section’s OEM, but not shown on the drawings or specified in sections 409XXX, to allow this equipment to function in the required manner, shall be furnished and installed under this section.
- F. Provide all miscellaneous supports, brackets, fasteners, and fabrications required to mount and install equipment controls provided under this section.

2.16 NF CONTROL DESCRIPTION

- A. The controls shall be designed to operate and control the NF Skids, NFFPs, MCS system, and Permeate Flush System.
- B. The permeate flux and recovery shall be adjustable such that the skid can be programmed to make different amounts of permeate. OEM shall program the skids to operate at varying capacities by adjusting the permeate flux and recovery.

C. NF Flow Calculations

1. Operator shall have the ability to enter the desired NF flux rate (gfd) and percent recovery (%) for each NF skid.
2. Operator shall have the ability to enter the number of pressure vessels in the first stage (#PV1) and second stage (#PV2), number of elements per vessel (#EL), and square footage of membrane area per element (AEL) for each NF Skid. #EL and AEL shall be a common input at one location for all skids.
3. Indicate the Total #PV (#PV1 + #PV2).
4. Indicate NF Permeate Flow ($NFP = \#PV \times AEL \times Flux$)
5. Indicate NF Feed Flow ($NFF = NFP / \% recovery$)
6. Indicate NF Concentrate Flow ($NFC = NFF - NFP$)
7. Indicate 2nd Stage NF Concentrate flow per pressure vessel:
 - a. $NFC_{PV2nd} = NFC / \#PV_{2nd}$
 - b. If $NFC_{PV2nd} < 15$, then provide alarm stating “Minimum 2nd Stage NFC flow per Pressure Vessel too low. Lower % recovery or raise flux.”

D. Communicate all parameters with the Plant SCADA system (PCS). Refer to Division 40, Section “Plant Control System” for a description of the plant operation.

E. General

1. The following control function description is preliminary; final design, detailing, and implementation of control strategy will be performed by the OEM.
2. All skids will be controlled by NF-MCP which will receive run/shutdown signals from the NF Building ACP (NF-ACP). NF-MCP will also receive the number of NF skids to be in service. Interface with NF-ACP must be coordinated with the System Integrator.
3. All control functions on the skids shall have Local Automatic, Remote Automatic, Off, and manual override. Manual control shall be limited to authorized personnel only and shall not be selectable from the face of the control panel. Remote/local selection shall apply to the overall start and stop function only, and shall not interfere with manual/auto operation of individual components, except where necessary safeties apply.
 - a. Remote position of selector permits the skid to receive the plant run signal from the NF-ACP.
 - b. Local position of selector inhibits the skid from receiving the plant run signal from the PCS.
 - c. All NF skid components must be capable of manual operation, but manual controls shall not be located individually at the NF Skid Control Panel (NF1, NF2, NF3, etc...)

F. Start Sequence

1. Start signal will be sent from the NF-ACP to NF-MCP. The number of NF skids in service will be sent from the NF-MCP to NF-ACP. Only one skid shall start at a time. Only one skid shall shutdown at a time (except for alarm conditions).
2. Pre-Flush
 - a. Open the NF concentrate (NFC) throttling valve 100%.
 - b. Close NF permeate (NFP) valve and open NF permeate dump (NFD) valve.
 - c. Start the NF feed pump at 25% and increase speed to obtain pre-programmed concentrate flow rate.
 - d. At the end of the pre-flush period, open the NF permeate (NFP) valve and close the NF permeate dump (NFD) valve. Valves shall be programmed to open/close slowly over 1 minute). Turn control over to the PID loops.
 - e. If pre-flush continues beyond an operator adjustable duration, initiate alarm.

- G. Permeate Flush System (if equipped)
1. Permeate Flush system shall be operated as described below during permeate flushing:
 - a. Permeate Flush tank fill shall be automatically controlled. Tank fill shall be accomplished using the Permeate Flush Tank fill valve, and the Permeate Flush Tank tank level sensor. The Permeate Flush System tank level sensor shall include operator adjustable setpoints for pump cut off, low water level, fill, and high water level.
 - b. Flush shall be performed as described under normal shutdown sequence. NF PLC to control all valving on the skid being flushed as well as the Permeate Flush Pump on/off and speed.
- H. MCS System
1. MCS system shall be operated as described below during membrane cleaning:
 - a. Skid to be cleaned shall be locked out from running via a HMI selector switch on any of the OITs. All automatic valves on the skid shall be automatically placed in the appropriate position for cleaning.
 - b. MCS tank fill will be manually controlled.
 - c. MCS tank water shall be automatically heated. Heating shall be accomplished using the heater. An operator adjustable setpoint shall be used to set the desired heated water temperature. An operator adjustable setpoint shall be included for a high temperature alarm. Heating is initiated using an operator controlled on/off/auto switch.
 - d. Once the MCS tank water is heated, the operator will manually add chemical (either in the top of the tank or using the eductor) and manually start the MCS pump using the on/off/auto switch. Operator will manually throttle the flow by observing the flowrate and controlling the VFD speed on the MCS pump.
- I. Normal Run Operation
1. Start the selected skid (one at a time). NF-MCP shall automatically rotate the skids and shall display the accumulated skid runtime. If any skid has not ran for an operator selectable duration, provide an alarm indicating that the skids have to be rotated.
 2. The operator shall be able to exclude each skid from running using a selector switch on any of the OITs. Each skid shall be started at 50% of design capacity and ran for 60 seconds before increasing slowly to the desired flow rate setting.
 3. Permeate Flow Control: The feed flow meter controls the feed pump VFD to maintain the preset flowrate.
 4. Concentrate Flow Control: Concentrate flowmeter controls the concentrate control valve to maintain the pre-set concentrate flow rate.
 5. Flow rates, pressures, and conductivities shall be monitored by the NF skid system controller. If any parameter goes beyond pre-set limits for more than an allowable time, it will indicate on the control panel and send a general alarm to the plant control system.
 6. If ORP exceeds setpoint, shut down the skid.
- J. Normal Shutdown
1. Stop signal will be sent from the NF-ACP to NF-MCP. The number of NF skids in service will be sent from the NF-MCP to NF-ACP. Only one skid shall stop at a time.
 2. Post-flush
 - a. System shall be set up for flushing with feed water (forward flush) or Permeate Flush (if equipped). If equipped, an operator adjustable selector switch shall indicate which flushing water source is to be used (forward flush or permeate flush).

- b. Control the NF feed pump or the permeate flush pump and/or the NF concentrate (NFC) control valve speed to obtain operator adjustable concentrate flow rate during the flush.
 - c. Open NF permeate dump (NFD) valve and close NF permeate (NFP) valve.
 - d. Open NF concentrate (NFC) valve 100%.
 - e. Continue post-flush for an operator adjustable setpoint duration.
 - f. Stop the NF feed pump or the Permeate Flush Pump.
 - g. Close the NF feed valve.
- K. Emergency Shutdown (Loss of Power): The emergency shutdown sequence shall be identical to the normal shutdown except that it is initiated by the shutdown logic rather than the operator.
- 1. All skids stop.
 - 2. NFC valve fails open.
 - 3. NFD valve fails open.
 - 4. No automatic restart of feed pumps or skids.
- L. Alarms and Shutdown (Internal Logic): There are a variety of conditions listed below which must be verified prior to proceeding with the next step in a start-up or shutdown sequence. These will be defined by the Engineer in conjunction with the OEM following contract award. Should any of these conditions be detected, the NF-MCP PLC shall issue an alarm indicating the failing equipment or permissive that caused the fault, and halt the sequence. If in automatic sequencing, the PLC shall shutdown the skid. If in manual sequencing, the PLC shall either proceed or shutdown the skid as directed by the operator via the OIT. The discrepancy alarm shall describe the condition which caused it in sufficient detail for the operator to investigate and correct the problem.
- 1. pH out of range: Alarm in main control system.
 - 2. NF feed suction low pressure: alarm and skid shutdown with post-flush.
 - 3. Antiscalant low tank level: Alarm and normal plant shutdown (in main control system).
 - 4. Antiscalant no flow: Alarm and normal plant shutdown (in main control system).
 - 5. High permeate pressure on each skid: Shut down skid with post-flush.
 - 6. Cartridge filter high differential pressure: Alarm in main control system.
 - 7. NF Feed pump high pressure: Alarm and shut down with post-flush.
 - 8. Failure of valve to reach specified position: Alarm.
 - 9. High permeate conductivity: Alarm.
 - 10. Permeate valve and permeate dump valve both closed: Shutdown with post-flush.
 - 11. Concentrate valve closed: Shutdown, no post-flush.
 - 12. Low concentrate flow: Shutdown with post-flush.
 - 13. NF skid rotation: Alarm.
- M. Include a performance monitoring software system for purposes of:
- 1. Automatic data acquisition
 - 2. Data trending
 - 3. Report generation
 - 4. Alarm management including notification and alarm archiving
 - 5. Remote web access to view data trending and reports
 - 6. Facilitating system performance analysis
 - 7. Facilitating performance optimization
 - 8. Refer to Part 3 “Service Agreement and Remote Monitoring”

PART 3 - EXECUTION

3.1 INSTALLATION OF MEMBRANE ELEMENTS

- A. Conform to the requirements of Division 01, Section “Quality Control”, paragraph 1.8, Manufacturer's Field Services.
- B. Installation work shall conform to the Membrane Manufacturer’s recommended procedures, instructions, and approved loading sequence.
- C. Provide for the services of a factory trained service technician of the membrane manufacturer to be present to supervise the installation of the membranes.

3.2 FACTORY ACCEPTANCE TESTING

- A. After final assembly is complete and prior to being shipped, each fully assembled skid shall undergo factory acceptance testing. All piping, pressure vessels, and associated appurtenances shall be tested to 150% of their maximum operating pressures. Any leaks, if discovered, shall be repaired, and factory acceptance testing shall be redone. OEM shall submit results of factory acceptance testing for approval. If desired by the Owner and/or Engineer, factory acceptance testing will be witnessed, in-person. OEM shall give written notice to Engineer no less than thirty (30) days prior to factory acceptance testing. OEM is not responsible for travel, lodging, or meal costs for the Owner or Engineer.

3.3 SPECIAL SERVICES

- A. Conform to the requirements of Division 01, Section “Quality Control”, paragraph 1.8, Manufacturer's Field Services.
- B. Follow the manufacturer's recommended procedures for testing, adjusting, and placing of equipment into proper operation.
- C. Startup and Commissioning
 - 1. Functional Testing
 - a. Functional testing of the membrane system shall be accomplished for each membrane skid with test orifices installed in the permeate ports of each vessel to simulate pressure drops. Skid to be operated at representative flows with automatic instrument control as required to confirm responsiveness over design operating range. Testing shall continue until each skid can be run for four consecutive hours without interruption. Two successful start-up and shutdown sequences shall be demonstrated prior to the start of the four-hour test. Demonstration of correct control loop operation in conjunction with CPI loop testing is also required.
 - b. At the conclusion of the functional testing the vessels shall be disinfected, cleaned with a manufacturer's recommended detergent, and flushed to ensure vessel cleanliness. Vessel interior surfaces shall be thoroughly wiped prior to the loading of the membranes. During membrane loading the brine seals, O-rings, connectors, anti-telescoping devices, and physical condition of the module wrap shall be inspected. Serial numbers and pressure vessel location of each membrane element shall be documented, tabulated and provided to the Engineer for review.
 - 2. Start-up Testing: Each membrane skid shall be started up, one at a time, and operated for a total of eight hours over a two-day period at design conditions. During this time two bacteriological samples (permeate) shall be taken and tested for heterotrophic plate count

(HPC). Acceptance shall be based upon bacteriological testing of permeate samples showing HPC less than 500 colony forming units per milliliter (CFU/ml). All samples shall be analyzed by an Ohio EPA certified laboratory.

3. Performance Testing

- a. Time of Performance Testing: The performance testing for the membrane system shall occur following completion of all facilities and equipment required for the testing. Final acceptance of the membrane system will be contingent upon successful performance testing. Performance testing of each train must be initiated within 60 days of bacteriological testing during startup.
- b. Testing Protocol: The OEM shall submit a proposed testing protocol 60 days prior to the initiation of the membrane system performance testing. The testing protocol shall have written approval by the Engineer prior to commencement of the testing program. The testing protocol shall include, but not be limited to, water quality sampling parameters, sampling locations, projected dates of the performance testing, Ohio EPA approved laboratory to be used for the water sample analysis, and time of sampling relative to time zero. Time zero for the membrane system performance testing is the time of the first sample.
- c. Duration of Performance Test: Each membrane skid shall be tested for four (4) consecutive days. Two (2) skids may be tested at a time. The OEM shall be fully responsible for every aspect of the performance test. Representatives of the OEM and shall be on site during the entire performance test. Representatives of the Engineer and Owner may also be present during the performance test.
- d. Performance Test Conditions: Each membrane skid shall be tested under design operating conditions.
- e. Data Collection During Performance Test: The following continuous data shall be collected hourly unless otherwise specified during the performance testing:
 - 1) Water Quality: feed water temperature, feed water conductivity, feed water pH, permeate temperature, permeate conductivity, permeate pH, concentrate conductivity, feed water SDI (twice daily), feed water turbidity, concentrate pH. Temperature, pH, and turbidity readings may be taken from the plant instrumentation provided the instrumentation is operable and calibrated at the time of the test.
 - 2) A Heterotrophic Plate Count sample shall be taken from the raw water, feed water, interstage feed, concentrate, and permeate within 4 hours after initial startup for each train and repeated just prior to the completion of the performance test. Samples and cultures of samples shall be in accordance with AWWA Standard Methods, current edition.
 - 3) Mechanical Data: feed water pressure, interstage pressure, permeate pressure, permeate flow, concentrate flow, flow control valve position, concentrate valve position, wells, operating, startup and shutdown times, chemical flow rates and dosages.
- f. Discrete Water Sampling: Samples shall be once per day during the four-day testing for a total of 4 sampling events. During a sampling event, the OEM shall take discrete water samples from the skid's feed, permeate, and concentrate streams for calcium, magnesium, total hardness, sodium, potassium, iron, manganese, barium, strontium, alkalinity, chlorides, sulfates, sulfides, nitrates, nitrites, fluoride, silica, pH, and total dissolved solids. The OEM shall submit samples to an Ohio EPA approved laboratory for analysis. All analytical results shall be transmitted to the OEM and Engineer.
- g. Test Report: A formal bound report shall be produced and submitted to the Engineer for all testing activities. Report shall contain detailed test plans and

results for all activities performed during testing. Results from all testing shall be tabulated, trended, and graphed as appropriate. Discussion of testing, along with conclusions and recommendations, shall be presented in the test report. All laboratory analyses shall be bound into the report as appendices.

4. Field Representative: The OEM shall provide the services of a qualified field representative for all startup and commissioning procedures. The representative shall perform all testing, operation, and debugging of the systems.
 5. Training
 - a. The OEM shall provide the services of a qualified representative for 5 days to instruct the Owner's personnel on proper operation, installation, sampling, cleaning, and maintenance for the membrane system.
 - 1) General Background: Ions, organics, bacteria, fungi, algae, sand, silt, clay, colloids, principles of diffusion, dissolved substances, and suspended substances. How nanofiltration works, Principles of net driving pressure. Semipermeable membranes, cellulosic and non-cellulosic. How membranes reject ions, organics, and particles. How NF elements are made and how they work.
 - 2) NF Skid Operation: The internal and external pieces of a nanofiltration skid. What happens inside the nanofiltration skid. Problems caused by dissolved substances. Why and how scaling and chemical attack occur. Problems caused by suspended substances. Why and how fouling by bacteria and inorganic particles occur. Pretreatment equipment and chemicals used to minimize operating problems. Monitoring techniques such as permeate flow normalization, percent salt rejection, pressure drops, and silt density index to detect problems.
 - 3) Maintenance: Issues involving the maintenance of the NF skids.
 - 4) Controls/operation of this specific installation including touch screens, logic, and operations.
 6. The OEM shall provide at least two (2) qualified field representatives to be on-site to coordinate and supervise the installation (1 week) and startup and commissioning (3 weeks) of the NF system for each WTP facility. Some time may be combined with that required for the other equipment provided by the OEM.
- D. Remote Monitoring: The OEM shall provide two (2) years of monitoring of all of the system operating parameters. Owner to provide OEM will required data (VPN connection is not permitted). The OEM shall provide a monthly status report with a complete analysis of all normalized data with recommendations for operation and maintenance. The period of remote monitoring shall commence upon Substantial Completion of the project.
- E. Field Service Agreement: The OEM shall provide a two (2) year service agreement to the Owner. Service agreement shall include all costs (including labor, travel, lodging, meals, and incidentals) for the following for each WTP facility:
1. Two (2) trips for a qualified field representative to be on-site to assist the Owner in troubleshooting and/or operation of the Nanofiltration Membrane Equipment. Each trip shall consist of four (4) full days of service. Travel days excluded from number of days of service.
 2. Two (2) trips for a qualified field representative to be on-site to assist the Owner in performing membrane cleaning. Each trip shall consist of three (3) full days of service. Travel days excluded from number of days of service.

END OF SECTION 46 6340

RARWTP RO MEMBRANE EQUIPMENT SCHEDULE

A. Performance Requirements

1. The raw water source is groundwater from wells which has been oxidized with sodium hypochlorite, filtered with gravity filters, and chemically conditioned to reduce ORP and provide antiscalant. Table 1 presents the water quality data which shall be used in the development of the RO system design.
2. Each NF train shall meet the permeate quality requirements specified in Table 1 throughout the performance warranty period while operating at the design recovery and permeate flowrate.

Table 1 – RARWTP Water Quality Data

Parameter	Unit	Raw Water	Permeate Requirements
NH4+ +NH3	mg/L	0.00	
K	mg/L	2.9	
Na	mg/L	33	
Mg	mg/L	27	
Ca	mg/L	102	
TH	mg/L as CaCO3	366	< 15
Sr	mg/L	0.33	
Ba	mg/L	0.10	
CO3	mg/L	0.27

F	mg/L	0.20	
SO4	mg/L	52.00	> 0.40
SiO2	mg/L	6.30	
Boron	mg/L	0.00	
TDS	mg/L	597.56	< 30
pH	s.u.	7.11	
Temperature	Degrees F	55-60	

B. NF Skid Design:

1. No. of Skids: Six (6)
2. Configuration: 2 Stage, 24:12
3. No. of Elements per Vessel: 7
4. Permeate Capacity: 1,030 gpm
5. Recovery: 80% (adjustable from 70% to 83% to maintain min. concentrate flow of 15 gpm/vessel and a maximum membrane recovery of 19% per element)
6. Flux: 14.7 gfd
7. Permeate Backpressure after skid:
 - a. Stage 1: 0-35 psig (adjustable)
 - b. Stage 2: 0-15 psig

C. NF Skid Dimensions:

1. Maximum Width: 95 inches (8'-0")
2. Maximum Length: 318 inches (26'-6")
3. Maximum Height: 150 inches (12'-6")

- D. MCS:
 - 1. Stage 1
 - a. Heater: 120 kW
 - 2. Stage 2
 - a. Heater: 75 kW

FAWTP RO MEMBRANE EQUIPMENT SCHEDULE

A. Performance Requirements

1. The raw water source is groundwater from wells which has been chemically conditioned to reduce ORP and provide antiscalant. Table 2 presents the water quality data which shall be used in the development of the RO system design.
2. Each NF train shall meet the permeate quality requirements specified in Table 2 throughout the performance warranty period while operating at the design recovery and permeate flowrate.

Table 2 – FAWTP Water Quality Data

Parameter	Unit	Raw Water	Permeate Requirements
NH4+ +NH3	mg/L	0.00

B. NF Skid Design:

1. No. of Skids: Three (3)
2. Configuration: 2 Stage, 27:14
3. No. of Elements per Vessel: 7
4. Permeate Capacity: 1,198 gpm
5. Recovery: 80% (adjustable from 70% to 83% to maintain min. concentrate flow of 15 gpm/vessel and a maximum membrane recovery of 19% per element)
6. Flux: 15.0 gfd
7. Permeate Backpressure after skid:
 - a. Stage 1: 0-35 psig (adjustable)
 - b. Stage 2: 0-15 psig

C. Dimensions:

1. Maximum Width: 95 inches (8'-0")
2. Maximum Length: 318 inches (26'-6")
3. Maximum Height: 150 inches (13'-2")

D. MCS:

1. Stage 1
 - a. Heater: 120 kW
2. Stage 2
 - a. Heater: 75 kW

SECTION 46 6342

SIDE-PORTED PRESSURE VESSELS

PART 1 - GENERAL

1.1 REFERENCE

- A. All applicable requirements of other portions of the Contract Documents apply to the work of this Section, including but not limited to Division 01 General Requirements.

1.2 DESCRIPTION OF WORK

- A. Work of this section includes furnishing and installation of all equipment necessary to provide the side-ported pressure vessels for the NF system.
- B. Equipment specified under this section shall be provided by the ROEM as part of the membrane treatment system.
- C. Equipment furnished and installed under this section shall be fabricated, assembled, erected and placed in proper operating condition in full compliance with drawings, specifications, engineering data, instructions, and recommendations of the equipment manufacturer unless exceptions are noted by the engineer.

1.3 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: All pressure vessels specified under this section shall be manufactured and supplied by one manufacturer.
- B. Reference Standards: The pressure vessel design must meet all the requirements of ASME Section X, entitled Fiber Reinforced Boilers and Pressure Vessels.

1.4 SUBMITTALS

- A. The manufacturer shall provide instructions on installation, operation and maintenance and proper application of the vessels as well as a vessel drawing. Submittals shall conform to the requirements set forth by Division 01 Section "Submittal Procedures". The documents provided shall include the following:
 - 1. Operation and Maintenance Instructions: Step-by-step instructions for opening and closing the vessel along with precautions and recommended maintenance procedures. These instructions shall be written to inform a general mechanic unfamiliar with NF vessels.
 - 2. Installation Instructions: Detailed instructions for handling, mounting and connecting the vessel.
 - 3. Application Guide: General guidelines to assist the NF system engineer to apply vessels correctly to the specific requirements.
 - 4. Engineering Drawing: detailed drawings that specify all parameters necessary to incorporate the vessel component into the NF system, including dimensions, weights, materials of construction and port size.

1.5 SPARE PARTS

- A. Spare parts shall be of the same manufacture and quality as those provided with the equipment. Spare parts shall be suitably packaged in accordance with the Manufacturer's recommendations, with labels indicating the contents of each package. Spare parts shall be delivered to the Owner with the equipment of this Section.
- B. Provide the following spare parts:
 - 1. 2 complete pressure vessel heads.

1.6 HANDLING, DELIVERY, AND STORAGE

- A. The pressure vessels shall be completely factory assembled and securely crated for shipment.
- B. When received at the site, the pressure vessels shall be stored in a clean, dry environment until ready for installation.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

- A. Pressure vessels shall have a diameter and length designed specifically to contain a quantity of 7 standard eight-inch diameter by 40-inch long spiral-wound membrane elements. The feed and concentrate ports shall be located in the sidewall of the pressure vessel. Vessels with multiple ports per end for direct vessel-to-vessel connection are permitted and required in order to simplify system design, provide a smaller footprint and eliminate excessive manifolds.
- B. Vessels shall have a maximum working pressure of not less than 200 PSI at a temperature up to 120 deg F (49 deg C) with a minimum operating temperature of not less than 20 deg F (-7 deg C).
- C. Vessels shall be complete with end closures, hardware and membrane element end adapters. Membrane elements and membrane interconnectors shall be furnished by the membrane element manufacturer.
- D. The adapters furnished shall be appropriate for the brand of membrane element specified. In addition, the vessel shall be designed to allow other makes of membrane elements to be easily accommodated by changing the adapters.
- E. The materials used in the construction of the pressure vessel shall meet ASME code requirements, including material selection and required strength for the anticipated operating conditions. These materials shall also have the following characteristics:
 - 1. All wetted head components in continuous contact with the pressurized process water shall be made from plastics that are known to have long-term resistance to corrosion in the service intended.
 - 2. All wetted nozzles in continuous contact with the pressurized process water shall be made from wrought pipe that is known to have long-term resistance to corrosion in the service intended.
 - 3. All other materials of construction shall be of appropriate strength and corrosion resistance for the operating conditions. The use of unanodized aluminum and plastic load bearing materials is strictly prohibited.

4. The materials of construction for each component part of the vessel shall be clearly and fully specified on the Engineering Drawing.

F. Manufacturer: Bekaert Progressive Composites, Codeline, Wave Cyber.

2.2 VESSEL SAFETY

- A. Vessels shall be designed to meet the standards of ASME Boiler and Pressure Vessel Code, Section X. Vessels shall be certified by manufacturer. Code stamp is not required.
 1. The Manufacturer shall be qualified to produce Code Certifiable Pressure Vessels per Section X of the Code as verified by possession of a current Certificate of Authorization issued by the ASME.
 2. Vessels shall be built to a design that has been qualified for fabrication through ASME Design and Procedure Qualification Tests. The tests include destructive pressure tests of prototype vessels. To qualify, a prototype must not burst at less than six times (6X) its rated pressure after being pressure cycled 100,000 times at 150 deg F.
 3. Vessels shall be fabricated so as to duplicate the qualified design through compliance with the ASME approved Procedure Specification written for the prototype. Proof of conformance is established through the workings of the ASME approved Quality Control System.
 4. Vessels shall be tested to assure conformance with the qualified design through ASME Quality Control and Production Tests. Each vessel undergoes ASME Production Tests, which include a Hydrostatic Leakage Test, at a pressure of 1.1 times the rated pressure.
 5. A third party ASME Authorized Inspector shall inspect vessels during fabrication in order to assure conformance with the qualified design.
 6. The materials shall be approved for use in pressure vessel construction by the standards of the ASME Boiler and Pressure Vessel Code. Such materials shall meet the following criteria:
 - a. Materials of construction shall be certified by the manufacturer to meet Code standards where applicable and shall be lot traceable to the vessel serial number.

2.3 VESSEL SHELL

- A. Pressure vessels shall be designed for ease of use and fail-safe operation. The vessels shall include the following:
 1. In order to provide superior long-term strength, the locking ring groove shall be integrally filament wound into the I. D. of the vessel. In addition, each groove shall incorporate an integrally wound 316L stainless steel insert for added groove durability and improved corrosion resistance. Cutting or grinding of fibers to form the locking ring groove is not acceptable as this may weaken the shell and directly affect the safety and service life of the vessel.
 2. The shell bore shall be fabricated from a resin-rich epoxy barrier that has been cured to allow for superior corrosion resistance, minimal extractables, improved life and high temperature (176 deg F/80 deg C) operation. Winding over plastic pipe is not acceptable under any circumstance.
 3. The shell of the vessel shall be fabricated of filament-wound fiberglass reinforced plastic (FWFRP) using continuous glass roving, impregnated with an elevated temperature cure epoxy resin system to provide superior dimensional stability and long term service life. The use of single monomer resin such as polyester is strictly prohibited.
 4. Each shell inside diameter shall be free of pits or voids that may promote bacterial growth or corrosive attack of the resin-rich barrier and shall conform to level 1 criteria as

ASME Section X, section 6-100.1. The bore diameter shall be a mirror-like, smooth surface and meet the following measurement criteria throughout the membrane interface area:

Nominal 8-inch diameter $7.955 \pm .005$.

5. Each shell shall have an exterior surface that has been coated with a two-part polyurethane enamel for superior gloss retention, abrasion resistance and to block light that may promote biological growth. Each end-bell shall be free of any grinding or sanding marks. The length of the shell between the bells shall be straight without any lumpiness that may indicate filament-winding inconsistency that could affect performance.
6. The shell shall be fail-safe to prevent catastrophic failure while in service. The head retention system shall fail at a nominal value of not less than 6 times design pressure to prevent the possibility of catastrophic failure while in service.

2.4 VESSEL HEAD

- A. Each vessel head shall be designed for removal by hand under normal operating conditions. In addition, each head shall feature a secondary removal means (such as female threads) to assist in head removal as required throughout the service life of the vessel.
- B. Each vessel head shall be constructed from ASME approved metal materials for indirect load bearing applications. The use of thermoplastics for direct load bearing applications is strictly prohibited.
- C. The primary means for head retention shall be a single retaining mechanism that provides ASME-required redundancy and is constructed of stainless steel for ease of use and long term reliability and shall be able to be removed by hand, without the use of any tools to reduce operation and maintenance costs.
- D. Each head shall contain an integral stainless steel secondary interlock that requires a simple, yet specific sequence of events to remove the end closure and shall not require the use of separate components that may become separated from the vessel. The use of plastic secondary interlock mechanisms that may become damaged by wear or environmental exposure are prohibited.
- E. The surfaces of the head that come in contact with the process fluid shall be constructed from PVC or other inert plastic to eliminate any problems with metal corrosion such as pitting or crevice corrosion.
- F. Permeate Port
 1. The permeate port shall be 1-1/2-inch NPT male or 1-1/2-inch grooved end, as recommended by the ROEM and as approved by the Engineer.
 2. The permeate port shall be constructed from PVC.
 3. Each permeate port shall be designed with an anti-rotation mechanism so that piping may be easily tightened.
- G. Permeate Sampling Valve
 1. The feed end permeate port of each pressure vessel shall be fitted with a 1/4-inch diameter thermoplastic ball valve that has been designed exclusively for membrane probing without excess permeate water loss.

2. The valve shall include a gripper nut that can be easily tightened and loosened by hand throughout the probing process.
3. The nut ferrule shall include an o-ring seal to prevent leakage during operation.
4. The valve shall be attached to the permeate port with a 1/4-inch 316 stainless steel nipple.

2.5 VESSEL SIDE PORTS

- A. Each side-ported feed/concentrate port shall be 2-1/2-inch diameter and constructed of wrought stainless steel pipe and shall be designed to interface the flexible grooved coupling. The port shall be marked for complete traceability with the part number and the heat lot of the material that can be traced to batch related corrosion test performance. The use of investment cast materials is prohibited.
- B. Each side-ported feed/concentrate port shall be designed so that they may be removed and replaced in the field by the end user without the use of special tools.
- C. The use of multiple ported vessels that allow direct vessel to vessel connections is permitted providing the following provisions are met:
 1. No more than three pressure vessels shall be connected to one feed/concentrate manifold connection without approval.
 2. The pressure drop between each connected set of three vessels shall not have a pressure differential in excess of 3 PSI.
 3. All multiple port connections shall be sized to limit feed water flow velocities to no more than 11 Feet per second. In addition membrane cleaning flow requirements must be considered when multiple porting is to be used.
 4. The feed manifold and concentrate manifold shall be located on opposite sides of each set of pressure vessels to ensure correct flow balancing. Design layouts that locate the feed manifold and concentrate manifold on the same side of each set of pressure vessels shall not be used without prior approval of the Engineer.
- D. Each side-ported feed/concentrate port shall be completely flush with the inside surface of the vessel so as to not interfere with membrane element loading. Ports that are in any way raised into the interior surface of the vessel shall not be acceptable.
- E. Each side port shall feature a direct metal to composite interface. The compression loading of any non-code material, such as thermoplastic that may creep under pressure, is not permitted.

2.6 VESSEL SEALS

- A. In order to assure field serviceability, all seals, whether in the shell or head, shall be visible so as to be directly accessible for replacement without the removal of any other components. Seal designs that do not eliminate dead space and may lead to biological growth are strictly prohibited.
- B. All permeate connection seals shall be designed to prevent rolling that may lead to seal damage.
- C. All permeate connection seals shall be peroxide-cured ethylene propylene (EPDM) rubber to increase seal life and reduce the effects of permanent compression set.

- D. Vessels shall not leak when properly installed. If leaking occurs, the vessel supplier is responsible for the repair or replacement of the vessel. Such leaking must be remedied within 14 working days from the notification of the leak.
- E. Each Head Seal shall be so designed to minimize cross sectional thickness to reduce the friction required for head installation and removal.
- F. Each head seal gland shall be designed to eliminate dead space and to expose the seal surface to high-pressure fluid for flushing of the seal in order to minimize bacterial growth.
- G. Each head seal gland shall be located on the head of the vessel and shall partially capture the seal, so that it remains on the head at all times, even during head removal, without becoming separated from the head, which may cause seal damage, misplacement or vessel leakage.
- H. Each side-ported feed/concentrate port shall incorporate an elastomeric seal that seals to vessel shell so that edge laminate surfaces are not exposed. Side port designs that do not eliminate seal dead space and may lead to biological growth are strictly prohibited.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with the Manufacturer's printed instructions.
- B. The NFEM shall provide documentation that the membrane skid piping design allows for expansion and contraction of the pressure vessels and that the system is designed in accordance with the vessels manufacturer's recommendations.

3.2 TESTING

- A. After installation, conduct pressure and leakage tests for each vessel as part of the membrane skid tests in accordance with Division 46 Section "Nanofiltration Membrane Equipment".
- B. Prior to membrane element installation, thoroughly clean, flush, and disinfect the pressure vessels. All disinfectant solution shall be completely flushed from the pressure vessels prior to membrane element installation.

END OF SECTION 46 6342

TO ALL DOCUMENT HOLDERS:

Subject: WCWSD RARWTP Membrane Softening Upgrades

AECOM Job No.: 60551697

Enclosed herewith is a copy of Addendum No. 1 covering the subject project.

Please retain this with your Documents.

Sincerely,

AECOM

A handwritten signature in black ink that reads "Matt Noelker". The signature is written in a cursive style and is positioned above the printed name.

Matthew Noelker, P.E.

1. GP-15 – Valve Schedule (FAWTP)

ADDENDUM TO THE
BIDDING DOCUMENTS
FOR:
Membrane Equipment Procurement

1.1 GENERAL

- A. This Addendum covers changes to the Documents and in closing the Contract will become a part thereof. Each Bidder shall include these items to the extent they affect his Bid.
- B. These items modify only the portion of the Documents specifically noted. All other wording and Drawings remain in effect.

1.2 CLARIFICATIONS

- A. The following is a list of clarifications regarding project documents. These clarifications include question received during the advertisement period:

Q: Please confirm that the assembly of goods onsite is in the scope of work of the OEM.

A: Yes, assembly of good onsite is in the scope of work of the OEM. This shall be included on the appropriate line items of the Bid Form. OEM will be responsible for these costs and these costs will be included in the Contract between the Seller and the Buyer.

Q: Please confirm that the value of the Contract between the Seller and the Buyer is equal to the total lump sum of the base bid (or the total lump sum of the alternate bid).

A: Yes, the total value of the Contract between the Seller and the Buyer will be equal to the total lump sum base bid (or the total lump sum alternate bid). Note that the Seller will likely have to enter into Contract with two different Buyers as the RARWTP and FAWTP construction contracts are being bid separately.

Q: In Section 40 0523 – Valves, Gates, and Accessories, paragraph 2.3.K.2, are Hayward BYV Series PVC butterfly valves an acceptable manufacturer?

A: If this valve meets the product specifications, it will be accepted.

Q: In Section 40 0523 – Valves, Gates, and Accessories, paragraphs 2.6.P and 2.7.P, is Rotork an acceptable manufacturer?

A: No. AUMA actuators must be provided.

Q: In Section 40 9100 – Primary Sensors and Field Instruments, paragraph 2.3.A.4, are Rosemount 8750W or Endress + Hauser W400 acceptable manufacturers?

A: No. Siemens Sitrans Series 5100 flow meters and 5000 Series transmitters must be provided.

Q: In Section 46 6340 – Nanofiltration Membrane Equipment, paragraphs 2.9.F.1 and 2.10.F.1, please clarify what is meant by “accessories”.

A: This includes any supports, mounting components, and any specific accessories identified in Section 40 9100 – Primary Sensors and Field Instruments.

Q: In Section 46 6340 – Nanofiltration Membrane Equipment, paragraphs 2.9.F.1 and

2.10.F.1, please clarify who is providing the conduit and wiring between instrumentation and MCS/Permeate Flush Panel(s).

A: This conduit and wiring will be provided by the General Contractor. See clarifications below in the project manual and the drawings.

Q: Please confirm that factory acceptance testing is required for skids that will be shipped to site unassembled for on-site assembly.

A: Factory acceptance testing of fully assembled skids is required for all skids, regardless of method of shipping and assembly. Refer to Section 46 6340 – Nanofiltration Membrane Equipment” paragraph 3.2.A for factory acceptance testing requirements.

Q: What motor size is being provided for the MCS pumps and the permeate flush pump?

A: These pumps will each have a maximum motor size of 60 hp.

1.3 PROJECT MANUAL

- A. Section 00 1113 – Advertisement for Bids
 - 1. Section 2 – Revise “Bids will be received by Engineer until May 15, 2020 @ 2 p.m.” to read “Bids will be received by Engineer until May 18, 2020 @ 2 p.m.”
- B. Section 00 4113 – Bid Form
 - 1. This section is being revised and reissued as an attachment to this addendum.
- C. Section 00 7343 – Wage Rate Determination
 - 1. This Section is being issued as an attachment to this addendum.
- D. Section 26 2200 Transformers
 - 1. Paragraph 2.2.A – Delete “b. General Electric Company.”
- E. Section 26 2913 Motor Controllers
 - 1. Paragraph 2.7.A – Modify the following text to read:
 - a. “2. Eaton Corporation.”
 - 2. Paragraph 2.7.A – Delete the following text:
 - a. “3. Square D.”
- F. Section 40 9000 Plant Instrumentation and Control System General Requirements
 - 1. Paragraph 1.1.B – Delete the entire last sentence starting with “Unit process logic residing...”
- G. Section 40 9443 Plant Control System (FAWTP)
 - 1. This section is being revised and reissued as an attachment to this addendum.
- H. Section 40 9443 Plant Control System (RARWTP)
 - 1. Paragraph 2.1 B.1 – Modify the following text to read:
 - a. “b. Color TFT LCD”
 - b. “c. 18-bit color graphics”
 - c. “h. NEMA 4X”
 - d. “j. 512 MB RAM and 512 MB user storage”
 - 2. Paragraph 2.1 B.2 – Modify the following text to read:

a. "a. Allen-Bradley, PanelView Plus 7 Performance"

I. Section 46 6340 – Nanofiltration Membrane Equipment

1. Paragraph 2.3. Add the following as subparagraph G:
"Velocities in piping shall not exceed 9 feet per second except in control valves or flow metering sections."
2. Paragraph 2.8.A – Revise "floor-mounted where indicated by the Drawings, adjacent to each skid" to read "mounted on the skid".
3. Paragraph 2.9.F.1 – Delete the following:
"Conduit and wiring between instrumentation and MCS shall be provided by OEM. Conduit and wiring shall comply with Division 26 and 409XXX series specifications." This conduit and wiring will be provided by the General Contractor.
4. Paragraph 2.10.A – Delete this paragraph.
5. Paragraph 2.11.A.3 – Revise to read as follows:
"Provide 500 filters for each WTP."
6. Paragraph 2.16.C. Add the following as subparagraph 8:
"Operator shall have the ability to enter the desired maximum flux for stage 1 of the membrane array. The stage 1 permeate throttling valve shall be automatically controlled to maintain this maximum flux rate."
7. RARWTP RO Membrane Equipment Schedule:
 - a. Table 1 – RARWTP Water Quality Data – Delete the row with the SO4 Parameter.
 - b. Table 1 – Add the following footnote: "TDS shall be calculated using the gravimetric analysis method."
8. FAWTP RO Membrane Equipment Schedule:
 - a. Table 1 – FAWTP Water Quality Data – Revise TH Permeate Requirements "<10" to "<15".
 - b. Table 1 – FAWTP Water Quality Data – Delete the row with the SO4 Parameter.
 - c. Table 1 – Add the following footnote: "TDS shall be calculated using the gravimetric analysis method."

1.4 DRAWINGS

A. E-06 (RARWTP). Note that this work is part of the General Contractor's scope.

1. Add Coded Note 16 symbol adjacent to the Membrane Cleaning System Control Panel. Under Coded Note 15, add Coded Note 16 text that reads, "PROVIDE CONTROL, ANALOG, AND POWER CONDUIT AND WIRES FROM THE MEMBRANE CLEANING SYSTEM CONTROL PANEL TO THE MEMBRANE CLEANING SYSTEM COMPONENTS. CONTROL CONDUITS SHALL BE 3/4" WITH (2)#14+(1)#14G FOR EACH CONTROL DEVICE. ANALOG CONDUITS SHALL BE 1" WITH (1) STP FOR EACH ANALOG DEVICE. POWER CONDUITS SHALL BE 1.25" WITH (3)#4+(1)#8G VFD CABLES FOR EACH PUMP, 2" CONDUIT WITH (3)#1/0+(1)#6G FOR THE 120KW HEATER, AND 1.5" CONDUIT WITH (3)#1+(1)#6G FOR THE 75KW HEATER."

B. GP-15 Valve Schedule (FAWTP)

1. This sheet is being revised and reissued as an attachment to this addendum.

C. E-09 (FAWTP). Note that this work is part of the General Contractor's scope.

1. Add Coded Note 18 symbol adjacent to the Membrane Cleaning System Control

Panel. Under Coded Note 17, add Coded Note 17 text that reads, "PROVIDE CONTROL, ANALOG, AND POWER CONDUIT AND WIRES FROM THE MEMBRANE CLEANING SYSTEM CONTROL PANEL TO THE MEMBRANE CLEANING SYSTEM COMPONENTS. CONTROL CONDUITS SHALL BE 3/4" WITH (2)#14+(1)#14G FOR EACH CONTROL DEVICE. ANALOG CONDUITS SHALL BE 1" WITH (1) STP FOR EACH ANALOG DEVICE. POWER CONDUITS SHALL BE 1.25" WITH (3)#4+(1)#8G VFD CABLES FOR EACH PUMP, 2" CONDUIT WITH (3)#1/0+(1)#6G FOR THE 120KW HEATER, AND 1.5" CONDUIT WITH (3)#1+(1)#6G FOR THE 75KW HEATER."

END OF ADDENDUM NO. 1
(SEE ENCLOSURES)

BID FORM

TABLE OF CONTENTS

	Page
Article 1 – BID RECIPIENT	2
Article 2 – BIDDER’S ACKNOWLEDGMENTS.....	2
Article 3 – BIDDER’S REPRESENTATIONS.....	2
Article 4 – BASIS OF BID.....	3
Article 5 – TIME OF COMPLETION	7
Article 6 – BID DOCUMENTS	8
Article 7 – DEFINED TERMS.....	8
Article 8 – BID SUBMITTAL	9

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

ARTICLE 1 – BID RECIPIENT

1.01 This Bid is submitted to the Engineer via email or via hand delivery, USPS, UPS, or FedEx to:

AECOM
ATTN: Matthew Noelker, P.E.
277 West Nationwide Blvd
Columbus, Ohio 43215
Matthew.noelker@aecom.com

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into an Agreement with Buyer in the form included in the Bid Documents to furnish the Goods and Special Services as specified or indicated in the Bid Documents for the prices and within the times indicated in this Bid and in accordance with the other terms and conditions of the Bid Documents.

1.03 The Buyer of the Goods and Special Services will be the successful Bidder(s) (Contractor(s)) for the referenced Projects.

ARTICLE 2 – BIDDER’S ACKNOWLEDGMENTS

2.01 Bidder accepts all of the terms and conditions of the RFP.

2.02 Bidder accepts the provision of the Agreement as to liquidated damages in event of its failure to furnish the Goods and Special Services in accordance with the schedule set forth in the Agreement.

ARTICLE 3 – BIDDER’S REPRESENTATIONS

3.01 In submitting this Bid, Bidder represents that:

A. Bidder has examined and carefully studied the Bid Documents included with the RFP, other related data identified, and the following Addenda, receipt of which is hereby acknowledged:

<u>Addendum No.</u>	<u>Addendum Date</u>
---------------------	----------------------

_____	_____
_____	_____
_____	_____
_____	_____

B. Bidder has become familiar with and is satisfied as to the local conditions that may affect cost, progress, delivery, or the furnishing of Goods and Special Services.

C. Bidder is familiar with and is satisfied as to all federal, state and local Laws and Regulations that may affect cost, progress, and the furnishing of Goods and Special Services.

D. Bidder has carefully studied and correlated the information known to Bidder, and information and observations obtained from Bidder’s visits, if any, to the Point of Destination with the Bid Documents.

E. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Bid Documents, and the written resolution thereof by Engineer is acceptable to Bidder.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- F. The Bid Documents are generally sufficient to indicate and convey understanding of all terms and conditions for furnishing the Goods and Special Services for which this Bid is submitted.
- G. Bidder further represents that this Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any agreement or rules of any group, association, organization or corporation; Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid; Bidder has not solicited or induced any individual or entity to refrain from Bid; and Bidder has not sought by collusion to obtain for itself any advantage over any other Bidder or over Buyer.

ARTICLE 4 – BASIS OF BID

ADD #1

- 4.01 Bidder will furnish the Goods and Special Services in accordance with these Contract Documents for the following price(s), which do not include sales tax. Prices shall be guaranteed until August 31, 2020. After this date, **if the Owner has not issued a Notice to Proceed to Buyer, and if requested by the ~~Buyer Seller~~ and approved by the Owner, ~~Buyer's Seller's~~ proposed prices may be escalated by the monthly change of the U.S. Consumer Price Index (CPI) as calculated by the U.S. Bureau of Labor Statistics.**

4.02 Additional Proposed Costs:

Description	Proposed Price
The Seller's monthly fee for storage of Goods at Seller's facilities in the event that Buyer desires to delay shipment beyond the shipment date stated below in Article 5.02. Such fee shall include interest on money due Seller.	
The Seller's monthly fee for Buyer delaying the initiation of manufacturing of Goods or for not executing the Procurement Agreement within the time specified in 4.03 below.	

4.03 Seller and Buyer shall execute the Procurement Agreement within 30 days after the Contractor's/Buyer's Notice to Proceed from the Owner. Should the Procurement Agreement not be executed within said 30 days due to the fault of the Buyer, the Buyer shall be subject to the prorated additional costs identified in Paragraph 4.02 above. Should the Procurement Agreement not be executed within the said 90 days due to the fault of the Seller, Seller shall be subject to the liquidated damages provisions in the Procurement Agreement. The issue of fault will be determined by the Engineer.

ARTICLE 5 – TIME OF COMPLETION

5.01 Bidder agrees that the furnishing of Goods and Special Services will conform to the schedules set forth below, which will be incorporated into Article 5 of the Agreement.

ADD #1

Description:	Proposed Number of Consecutive Calendar Days:
Time required by Seller to submit approvable Shop Drawings (consecutive calendar days after Notice to Proceed is issued to Buyer)	(maximum of 30 days)
Time required by Seller after receipt of approved Shop Drawings to deliver acceptable Goods to Point of Destination: Time required by Seller to deliver acceptable Goods to Point of Destination and complete assembly of goods onsite (consecutive calendar days after Notice to Proceed is issued by Buyer). (consecutive calendar days)	(maximum of 150 days)
Time required by Seller to complete assembly of goods onsite (exclude time for unloading skids, setting/anchoring skids, making connections to General Contractor process piping, and making connections to Electrical Contractor power)	
Time required by Seller to complete all Special Services (consecutive calendar days after notification from Buyer to	

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

Seller to commence such Special Services.):	
Time required by Seller to be ready for Final Inspection and Acceptance of all Goods and all Special Services (consecutive calendar days after notification from Buyer to Seller to commence such Special Services.):	

5.02 Bidder agrees that the prices in Article 4 above are based on the condition that shipment of goods may be delayed by the Buyer.

ARTICLE 6 – BID DOCUMENTS

6.01 The following documents are attached with and made a condition of this Bid:

- A. Attachment 1: Bidder Qualifications
- B. Attachment 2: Scope of Supply
- C. Attachment 3: OEM Special Services
- D. Attachment 4: OEM Warranty
- E. Attachment 5: Installation Instructions and Contractor’s Responsibilities
- F. Attachment 6: Spare Parts

ARTICLE 7 – DEFINED TERMS

7.01 The terms used in this Bid have the meanings indicated in the General Conditions. The significance of terms with initial capital letters is described in the General Conditions.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

ARTICLE 8 – BID SUBMITTAL

8.01 This Bid is submitted by:

If Bidder is:

A Partnership

Partnership Name: _____

By: _____
(Signature of general partner -- attach evidence of authority to sign)

Name (typed or printed): _____

A Corporation

Corporation Name: _____ (SEAL)

State of Incorporation: _____
Type (General Business, Professional, Service, Limited Liability): _____

PART 1 GENERAL

1.1 REFERENCE

- A. Prevailing wage rates, as determined by the United States Department of Labor for Warren County, the county in which the project is located, shall be used in accordance with the provisions of the Davis-Bacon Wage determinations as provided in 29 CFR 1.5 and 1.6(b). A copy of these rates is attached.

1.2 USE

- A. Keep posted at all times throughout the Contract period the wage rate pages that are effective at the time of Bid opening.
- B. Maintain, throughout the construction period, a legible up-to-date copy. Post in a conspicuous place accessible to workers and protected from the weather.
- C. The successful Bidder shall be required to conform to all provisions of the Federal Davis-Bacon and Related Acts (The Act) which requires that all laborers and mechanics employed by contractors and subcontractors performing on federal contracts (and contractors and subcontractors performing on federally assisted contracts under the related ACTS) in excess of \$2,000 pay their laborers and mechanics not less than the prevailing wage rates and fringe benefits, as determined by the Secretary of Labor, for corresponding classes of laborers and mechanics employed on similar projects in the area.
- D. All Bidders must abide by the latest prevailing wage rate listing effective at the time of Bid opening.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION 00 7343

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

(THIS PAGE INTENTIONALLY LEFT BLANK)

"General Decision Number: OH20200103 02/07/2020

Superseded General Decision Number: OH20190103

State: Ohio

Construction Type: Building

County: Warren County in Ohio.

BUILDING CONSTRUCTION PROJECTS (does not include single family homes or apartments up to and including 4 stories).

Note: Under Executive Order (EO) 13658, an hourly minimum wage of \$10.80 for calendar year 2020 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least \$10.80 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2020. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate, if it is higher than the conformed wage rate). The EO minimum wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave

for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of "identifiers" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than "SU" or "UAVG" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the "SU" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- * an existing published wage determination
- * a survey underlying a wage determination
- * a Wage and Hour Division letter setting forth a position on a wage determination matter
- * a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

 Articulated End Dump

 WELDERS - Receive rate prescribed for craft performing

operation to which welding is incidental.

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of "identifiers" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than "SU" or "UAVG" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number

where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the "SU" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- * an existing published wage determination
- * a survey underlying a wage determination
- * a Wage and Hour Division letter setting forth a position on a wage determination matter
- * a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board

U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

END OF GENERAL DECISION"

SECTION 40 9443

PLANT CONTROL SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. General: Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specification sections, apply to this section.
- B. Related Sections: The following sections contain requirements that relate to this section.
 - 1. Division 26 Section "Basic Electrical Requirements".
 - 2. Division 26 Section "Basic Electrical Materials".
 - 3. Division 26 Section "Signal and Communication Cables".
 - 4. Division 26 Section "Wires, Cables, and Connectors".
 - 5. Division 40 Section "Instrumentation – General".
 - 6. Division 40 Section "Control Panels".

1.2 DESCRIPTION OF WORK

- A. General: Provide all labor, tools, equipment, and materials necessary for a complete and operational Plant Control System in accordance with the plans and as specified herein.
- B. Contractor shall furnish all labor, materials, and components, and shall provide all design, assembly, testing, and start-up services required to provide a complete and operational programmable controller system (referred to herein as PLC) as specified and shown on the Drawings. The system includes, but is not necessarily limited to the following:
 - 1. Processor modules.
 - 2. Communication equipment.
 - 3. Input/output (I/O) modules.
 - 4. Operator interface equipment.
 - 5. Mounting racks.
 - 6. Power supplies.
 - 7. Programming equipment.
 - 8. Software.

1.3 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with requirements of the National Electrical Code (NEC) and all other applicable federal, state, and local codes and regulatory requirements.
- B. Standards: Materials and workmanship shall conform to the following standards:
 - 1. National Electrical Manufacturers Association (NEMA).
 - 2. Institute of Electrical and Electronic Engineers (IEEE).
 - 3. American National Standards Institute (ANSI).
 - 4. National Fire Protection Association (NFPA).
 - 5. Underwriters' Laboratories (UL).
 - 6. International Society for Measurement and Control (ISA).

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

C. Qualifications

1. Manufacturer's Qualifications: Firms regularly engaged in the manufacture of programmable logic controllers (PLCs) whose products have been in satisfactory use in similar service for not less than 5 years.
2. Installer's Qualifications: Firm with at least 5 years of successful installation experience on projects with materials and equipment similar to items specified herein.

1.4 SUBMITTALS

- A. General: Furnish manufacturer's product data for all components.
- B. Materials List: Submit a bill of materials listing quantities, manufacturer's name, and catalog numbers.
- C. Wiring Diagrams: Submit wiring diagrams showing all connections for all equipment furnished under this section. Wire, terminal, and component labeling shall follow established facility conventions where applicable.
- D. System Hardware and Software Documents: Furnish a system block diagram, I/O drawings, and control strategy descriptions. Turn over all factory software documentation and manuals to the Engineer after completion of field testing.
- E. Dimensional Drawings: Furnish dimensional drawings for each piece of equipment to be provided.
- F. Program Documentation: Submit annotated printouts of all PLC and Human Machine Interface (HMI) programs. Provide copies of all PLC and HMI programs on a flash drive.
- G. Manufacturer's Data Sheet: Provide manufacturer's data sheet on all equipment including model numbers, serial numbers, ranges, scales, and a detail of each component.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Storage and Protection: Store the items furnished under this section in a manner that meets the requirements of the manufacturer until they can be installed. Use all means necessary to protect the material of this section before, during, and after installation, and to protect the installed work and materials of all other trades.

1.6 DEFINITIONS

- A. Training Day: A training day is defined as 8 hours of classroom and hands-on instruction, including two 15-minute breaks and excluding lunchtime, Monday through Friday.

1.7 SCADA ALLOWANCE

- A. The Contractor shall include in the bid an allowance for the purchase of computers, accessories, peripherals, and/or furniture for the Owner. These components shall be provided by the System Integrator. The Owner shall be able to select the computers, accessories, peripherals, and/or furniture during the shop drawing review process with technical input from the System Integrator.

PART 2 - PRODUCTS

2.1 SCADA SYSTEM

- A. Programmable Logic Controller (PLC) Components:
 - 1. Rack Mounted:
 - a. Processor Module: 1756-L81E
 - b. Digital Input Module: 1756-IA16I
 - c. Digital Output Module: 1756-OW16I
 - d. Analog Input Module: 1756-IF8I
 - e. Analog Output Module: 1756-OF8I
 - f. Communication Module: 1756-EN2T
 - g. Power Supply: 1756-PA75/B
 - h. Chassis: 1756-A17
 - 2. Protocol Gateway:
 - a. Model as required for native protocol to Ethernet/IP conversion for quantity of connected devices.
 - b. DIN Rail mounted
 - 3. Manufacturers:
 - a. All components shall be manufactured by Allen-Bradley or an Encompass Partner.

- B. Operator Interface Terminal (OIT):
 - 1. Features:
 - a. Touch screen flat display
 - b. Color TFT LCD
 - c. 18-bit color graphics
 - d. Size: 15" diagonal nominal, unless otherwise noted
 - e. Resolution: 1024x768, minimum
 - f. Communications: Ethernet/IP, USB
 - g. SD card slot
 - h. NEMA 4X
 - i. Real-time battery backed clock
 - j. Memory: 512 MB RAM and 512 MB user storage
 - k. Input Power: 120VAC
 - 2. Manufacturers:
 - a. Allen-Bradley, PanelView Plus 7 Performance

PART 3 - EXECUTION

3.1 CUSTOM PROGRAMMING

- A. Custom Programming of all vendor provided control panels, including their PLCs and OITs, shall be provided by that vendor under the applicable specification section of the associated equipment.
 - 1. Provide database spreadsheets for peer-to-peer communication coordination between other onsite PLCs that need to share data.
 - 2. Provide database spreadsheets for Plant HMI/SCADA communication coordination.
 - 3. Provide annotated copies of all PLC programs.
 - 4. Provide an electronic copy of all PLC and OIT programming files for the Owner on a flash drive. Format shall be as required to reload into PLC memory. Logic version shall be the final program after all equipment has been installed and commissioned and Operational Demonstration is complete and successful to the Owner's approval.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- B. Custom Programming of non-vendor provided control panels, including their PLCs and OITs, will be provided by the Owner.
- C. Custom Programming of plant's existing HMI/SCADA will be provided by the Owner.
- D. Variable Frequency Drives
 - 1. Provide programming for all VFDs connected to the network.
 - 2. Read and display the contents of a minimum of eight registers in each VFD.
 - 3. Coordinate with the Owner prior to the start of programming to select the register to be displayed.
- E. Graphic Screens
 - 1. Submit all graphic screens for Owner review and comment when sixty percent complete.
 - 2. Provide navigation controls on all screens to allow movement between screens.
 - 3. Conform to NFPA 79, Industrial Machinery on colors for indicators and controls.
 - 4. Conform to Owner standards for colors of process equipment and piping.
 - 5. Utilize industry standard symbols or graphically realistic drawings for process equipment.
 - 6. Provide a separate screen for each group of process equipment.
 - 7. Group related screens in a logical manner such as by building, plant flow, liquid stream/solids stream, etc.
 - 8. At a minimum, provide the following screens:
 - a. Plant Overview
 - b. NF Building Overview
 - c. NF Feed Pumps Overview
 - d. NF Skids Overview
 - e. Corrosion Inhibitor System Overview
 - f. Sodium Hydroxide System Overview
 - g. Antiscalant System Overview
 - h. NF Feed Pump Control Graphics
 - i. Corrosion Inhibitor Chemical Equipment Control Graphics
 - j. Corrosion Inhibitor Chemical Feed Control Graphic
 - k. Sodium Hydroxide Chemical Equipment Control Graphics
 - l. Sodium Hydroxide Chemical Feed Control Graphic
 - m. Antiscalant Chemical Equipment Control Graphics
 - n. Antiscalant Chemical Feed Control Graphic
 - o. Sodium Hypochlorite System Overview
 - p. Fluoride System Overview
 - q. Sodium Hypochlorite Chemical Equipment Control Graphics
 - r. Sodium Hypochlorite Chemical Feed Control Graphic
 - s. Fluoride Chemical Equipment Control Graphics
 - t. Fluoride Chemical Feed Control Graphic
 - u. Electrical Service Overview
 - v. Alarm Summary Screens
 - w. Equipment Runtimes (with resets) Screen
 - x. Totalizers Screen
 - y. (10) Analog Signal Trending Screens – Owner Directed
 - z. (10) Overview/Control Screens – Owner Directed
- F. Global Programmed Control Strategies
 - 1. Meet with Plant Personnel before start of programming to determin:

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- a. Time of day for resetting of daily totalizers
- b. Security Levels for all screens
- c. The master PCS clock and approach to sync network devices
2. Display all alarms at the HMI.
3. Provide means to acknowledge all alarms at the HMI.
4. Provide alarms for PLC failure and network failure.
5. Totalize the number of starts for all process equipment and display on the plant HMI.
6. All process setpoints displayed on HMI screens and read back for confirmation.
7. All process setpoints adjustable from the HMI screens with correct security level.
8. Perform a runtime calculation for all process equipment at PLC and display at the HMI.
9. Display rate, total, and daily total for all process flows at the HMI.
10. Display all process levels at the HMI.
11. Store average daily flow rates and peak hourly flow rates of all flow meters one year or more at SCADA.
12. One year of data shall be stored for trending with data saved every 15 minutes. Daily totals shall also be saved. Each year, or at any time, the Operator shall be able to copy this data to a CD or DVD in a spreadsheet format.
13. All inline instrumentation shall be shown with instantaneous values on the HMI. One year of data shall be stored for trending. Each year, or at any time, the Operator shall be able to copy this data to a CD or DVD in a spreadsheet format.
14. All data shall be automatically graphed when chosen by the operator. These trending graphs shall not reset when closed or when the operator switches between data screens or other graphs.
15. All bits/elements in PLC logic shall be commented. If not used, then comment as SPARE.
16. SCADA historical graphs shall include programming to constantly refresh to appear as a "live, historical trend".

G. SCADA Programming Functional Requirements

1. The Functional Descriptions below are intended to aid in defining the scope of work for PLC/OIT/HMI programming. These functional descriptions are intended to be supplemental to the requirements as shown on the Drawings. Hardwired interlocks for equipment control may not be described below. Hardwired interlocks shall be mimicked in PLC logic.
2. Where the referenced detail applies to multiple, similar equipment controls, only one is described. Control for associated equipment is similar.
3. Reference the PLC I/O schedules. The PLC I/O shall be utilized by PLC/HMI programming, as required, to allow the respective equipment to function as described by the Contract Documents.
 - a. All alarm and equipment status monitoring PLC I/O inputted into the Plant Control System (PCS) shall be annunciated via the HMI.
4. All references to set points as "adjustable" below shall include the capability to adjust the set point via the HMI.
5. FUNCTIONAL DESCRIPTION INDEX:
 - a. "6. NF BUILDING SOFTENING SYSTEM"
 - b. "7. CORROSION INHIBITOR CHEMICAL FEED SYSTEM"
 - c. "8. SODIUM HYDROXIDE CHEMICAL FEED SYSTEM"
 - d. "9. ANTISCALANT CHEMICAL FEED SYSTEM"
 - e. "10. SODIUM HYPOCHLORITE CHEMICAL FEED SYSTEM"
 - f. "11. FLUORIDE CHEMICAL FEED SYSTEM"
 - g. "12. EXISTING PROCESS CONTROL MODIFICATIONS"

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- h. "13. EMERGENCY POWER"
 - i. "14. CRITICAL ALARMS"
6. NF BUILDING SOFTENING SYSTEM
- a. NF Bypass Flow
 - 1) General: Used to continuously monitor the NF Bypass flow rate.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the NF Bypass Flow Control Loop
 - 4) Monitoring:
 - a) Local: Instantaneous flow indication
 - b) PCS: NF Bypass Flow
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Bypass Flow, Loss of Signal
 - b. NF Bypass Flow Control Valve
 - 1) General: Used to divert flow around the membrane skids.
 - 2) Control:
 - a) Local: With the LOCAL-STOP-REMOTE selector switch at the actuator in the LOCAL position, the operator can open or close the valve by using the OPEN-CLOSE selector switch at the actuator. With the LOCAL-STOP-REMOTE selector switch at the actuator in the STOP position, the actuator will stop and maintain its current position.
 - b) PCS: With the LOCAL-STOP-REMOTE selector switch at the actuator in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the NF Bypass Flow Control Valve via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually set a desired position.
 - (2) AUTO: The NF Bypass Flow Control Valve shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED, HARDNESS, and PERCENT control modes.
 - (a) FIXED: The valve position shall vary in order to maintain an operator entered desired NF Bypass Flow rate.
 - (b) HARDNESS: The valve position shall vary in order to maintain an operator entered desired Blended Water Hardness.
 - a. If no groundwater well pumps are operating and a plant run command is active, the valve shall move to the operator entered plant startup initial position and shall remain at that position until a groundwater well pump starts operating.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- b. Flow rate = $[(\text{BW flowrate} \times \text{BW hardness}) - (\text{NFP flowrate} \times \text{NFP hardness})] / \text{NFF hardness}$
 - (c) PERCENT: The valve position shall vary in order to maintain an operator entered desired NF Bypass Flow rate as a percentage of Blended Water Flow.
 - a. If no groundwater well pumps are operating and a plant run command is active, the valve shall move to the operator entered plant startup initial position and shall remain at that position until a groundwater well pump starts operating.
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: Opened, Closed, Position
 - b) PCS: Remote, Opened, Closed, Position
 - 5) Alarms:
 - a) Local: Fault
 - b) PCS: Fault, Loss of Signal
 - c. Cartridge Filter 1 Differential Pressure
 - 1) General: Used to monitor if the Cartridge Filter needs cleaned.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous differential pressure indication
 - b) PCS: Cartridge Filter 1 Differential Pressure
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Cartridge Filter 1 Differential Pressure, Loss of Signal
 - d. NF Bypass Header Pressure
 - 1) General: Used to continuously monitor the pressure for NF Bypass Header.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Used for Groundwater Wells speed control.
 - 4) Monitoring:
 - a) Local: Instantaneous pressure indication
 - b) PCS: NF Bypass Header Pressure
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Bypass Header Pressure, Loss of Signal
 - e. NF Feed Pump 1 Suction Pressure
 - 1) General: Used to continuously monitor the pressure for NF Feed Pump 1 Suction.
 - 2) Control:

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous pressure indication
 - b) PCS: NF Feed Pump 1 Suction Pressure
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Feed Pump 1 Suction Pressure, Loss of Signal
- f. NF Feed Pump 1
- 1) General: Used to source water to the membrane skids.
 - 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
 - b) VFD: The VFD frequency can be manually adjusted utilizing the potentiometer or VFD HIM module at the VFD.
 - c) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of NF Feed Pump 1 via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop and adjust the frequency of NF Feed Pump 1.
 - (2) AUTO: NF Feed Pump 1 shall be automatically controlled via PLC programming. NF Feed Pump 1 speed shall be varied as called for by the NF Skids Master PLC.
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: Running, Stopped, Vibration, Bearing Temp, Stator Temp
 - b) VFD: Running, Stopped, Frequency, Amps, Volts
 - c) PCS: Remote, Running, Stopped, Vibration, Bearing Temp, Stator Temp, Frequency, Amps, Volts, VFD LOR Switch Position
 - 5) Alarms:
 - a) Local: General Alarm, High Vibration Alarm, High Bearing Temp Alarm, High Stator Temp Alarm
 - b) VFD: VFD Fault Alarm
 - c) PCS: Motor High Temperature, High Vibration Alarm, High Bearing Temp Alarm, High Stator Temp Alarm, Low Suction Pressure, High Discharge Pressure, VFD Fault, Loss of Signal
- g. NF Feed Pump 1 Discharge Pressure
- 1) General: Used to continuously monitor the pressure for NF Feed Pump 1 Discharge.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- a) Local: Instantaneous pressure indication
- b) PCS: NF Feed Pump 1 Discharge Pressure
- 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Feed Pump 1 Discharge Pressure, Loss of Signal
- h. Blended Water Flow
 - 1) General: Used to continuously monitor the Blended Water flow rate.
 - 2) Control:
 - a) Local: None
 - b) PCS: Operator shall have the ability to select MAINTENANCE, FLOWMETER, or SUM TOTAL as the BW Flow signal source via the HMI.
 - (1) MAINTENANCE: The operator shall have the ability to enter in a flow value during flowmeter maintenance to reduce impact on chemical feed systems.
 - (2) FLOWMETER: The signal from this flowmeter is used.
 - (3) SUM TOTAL: The sum of all Skid Discharge Flows plus the NF Bypass Flow signal is used.
 - 3) Logic Interlocks/Permissives:
 - a) Used for the chemical feed dosing calculations.
 - 4) Monitoring:
 - a) Local: Instantaneous flow indication
 - b) PCS: Blended Water Flow
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Blended Water Flow, Loss of Signal
- i. Blended Water pH
 - 1) General: Used to continuously monitor the pH level of the Blended Water.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Used for chemical feed dosing calculations.
 - 4) Monitoring:
 - a) Local: Instantaneous pH indication
 - b) PCS: Blended Water pH
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Blended Water pH, Loss of Signal
- j. Blended Water Chlorine Residual
 - 1) General: Used to continuously monitor the chlorine residual of the Blended Water.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- a) Local: Instantaneous Chlorine Residual indication
- b) PCS: Blended Water Chlorine Residual
- 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Blended Water Chlorine Residual, Loss of Signal
- k. Blended Water Fluoride Residual
 - 1) General: Used to continuously monitor the fluoride residual of the Blended Water.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous Fluoride Residual indication
 - b) PCS: Blended Water Fluoride Residual
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Blended Water Fluoride Residual, Loss of Signal
- l. Blended Water Phosphate Residual
 - 1) General: Used to continuously monitor the phosphate residual of the Blended Water.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous Phosphate Residual indication
 - b) PCS: Blended Water Phosphate Residual
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Blended Water Phosphate Residual, Loss of Signal
- m. NF Concentrate Conductivity
 - 1) General: Used to continuously monitor the conductivity of the skid concentrate.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous conductivity indication
 - b) PCS: NF Concentrate Conductivity
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Concentrate Conductivity, Loss of Signal

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- n. NF Concentrate pH
 - 1) General: Used to continuously monitor the pH level of the NF Concentrate.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous pH indication
 - b) PCS: NF Concentrate pH
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low NF Concentrate pH, Loss of Signal
- o. NF Skid Control Interface
 - 1) General: All control of individual NF Skids, Membrane Cleaning System, and associated equipment is performed by the NF Skids Master PLC. Custom programming requirements for that vendored system are specified under Section 466340. Programming requirements described below are provided under this Section for NF Building ACP PLC/OIT and SCADA.
 - 2) Operator shall have the ability to enter the following water quality parameters for NF Feed and NF Permeate. These values will be used to determine the NF Bypass flowrate when operated in HARDNESS mode.
 - a) Total Hardness in NF Feed (THNFF = 366 mg/L as CaCO₃)
 - b) Total Hardness in NF Permeate (THNFP = 10.8 mg/L as CaCO₃)
 - 3) PLC shall calculate and SCADA shall indicate and trend the following:
 - a) Total NF Feed flow rate (Total NFF = NFP + NFC)
 - b) NF Bypass Flow (NFB = NFP x %NFB).
 - c) Indicate Raw Water Flow Rate (RW = NFF + NFB).
 - d) Actual %NFB (%NFB = NFB / BLW)
 - (1) NFB from flow meter
 - (2) BLW = NFP flow meters from skids + NFB flow meter
 - (3) THBLW = [(NFB x THNFF) + (NFP x THNFP)] / BW
 - 4) All Skid OIT and MCS screen information and operator entry shall be duplicated at SCADA.
- p. NF Process Start/Stop
 - 1) Control: Operator shall have the ability to place the softening process on automated Start/Stop control. If enabled, the plant shall start if the existing clearwell level drops below an operator adjustable setpoint. The plant shall shutdown if the clearwell level rises above an operator adjustable setpoint.
 - 2) When the plant startup is auto initiated:
 - a) Open NF Bypass Valve to initial setpoint.
 - b) Start Chemical Feed Systems.
 - c) Start Groundwater Wells.
 - d) Start NF Feed Pumps and NF Skids. The quantity of skids needed shall be based on NF Skid Call Level setpoints.
 - 3) When the plant shutdown is auto initiated:
 - a) NF Skids and NF Feed Pumps shall perform a permeate flush or forward flush before stopping.
 - b) Groundwater Wells shall continue to operate until all NF Skids and NF Feed Pumps have stopped.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- c) Close NF Bypass Valve.
- d) Stop Chemical Feed Systems.

7. CORROSION INHIBITOR CHEMICAL FEED SYSTEM

- a. Corrosion Inhibitor Storage Tank 1 Level
 - 1) General: Used to continuously monitor the liquid level in Corrosion Inhibitor Storage Tank 1.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous level indication
 - b) PCS: Corrosion Inhibitor Storage Tank 1 Level
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Corrosion Inhibitor Storage Tank 1 Level, Loss of Signal
- b. Corrosion Inhibitor Storage Tank 1 Outlet Valve
 - 1) General: Used to isolate Corrosion Inhibitor Storage Tank 1 from the outlet header.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (4) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (5) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- c. Corrosion Inhibitor Storage Tank 1 Recirc Valve
 - 1) General: Used to direct chemical to Corrosion Inhibitor Storage Tank 1 from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.
- 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence
- 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
- 5) Alarms:
 - a) Local: None
 - b) PCS: None
- d. Corrosion Inhibitor Transfer Pump
 - 1) General: Used to pump Corrosion Inhibitor chemical between tanks.
 - 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
 - b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
 - (2) AUTO: Corrosion Inhibitor Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Corrosion Inhibitor Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Alarm
 - b) PCS: Motor High Temperature, Motor Overload
- e. Corrosion Inhibitor Day Tank Inlet Valve
 - 1) General: Used to direct chemical to Corrosion Inhibitor Day Tank from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Corrosion Inhibitor Chemical Transfer Sequence.
- 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
- 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
- 5) Alarms:
 - a) Local: None
 - b) PCS: None
- f. Corrosion Inhibitor Day Tank High Level
 - 1) General: Used to prevent overfilling the day tank.
 - 2) Control:
 - a) Local: None.
 - b) PCS: None.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Corrosion Inhibitor Day Tank High Level
- g. Corrosion Inhibitor Day Tank Weight
 - 1) General: Used to continuously monitor the weight of the Corrosion Inhibitor Day Tank.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Corrosion Inhibitor Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous weight indication
 - b) PCS: Corrosion Inhibitor Day Tank Weight
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Corrosion Inhibitor Day Tank Weight, Loss of Signal
- h. Corrosion Inhibitor Feed Pump 1
 - 1) General: Used to inject Corrosion Inhibitor into the water for treatment.
 - 2) Control:
 - a) Local: With the LOCAL-REMOTE selector switch at the pump in the LOCAL position, the operator can operate the pump per the manufacturer's interface.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- b) PCS: With the LOCAL-REMOTE selector switch at the pump in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI. Operator shall have the ability to enter the solution concentration, specific gravity, and pump capacity.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump and set a desired speed.
 - (2) AUTO: Corrosion Inhibitor Feed Pump 1 shall be automatically controlled via PLC programming. Operators shall have the ability to select between FIXED and DOSE control modes.
 - (a) FIXED: The pump speed shall maintain an operator entered desired lbs/day setpoint.
 - (b) DOSE: The pump speed shall vary in order to maintain an operator entered desired mg/L setpoint.
- 3) Logic Interlocks/Permissives:
 - a) Corrosion Inhibitor Day Tank Low-Low Level Alarm must be inactive for pump to operate.
- 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
- 5) Alarms:
 - a) Local: Fault
 - b) PCS: Fault, Loss of Signal, Flow Deviation Alarm
- i. Corrosion Inhibitor Chemical Transfer Sequence
 - 1) General: Used for automated control of transferring chemical between tanks.
 - 2) Control:
 - a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
 - b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
 - (1) TRANSFER:
 - a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
 - d. Once both opened, the transfer pump shall operate until the Stop level is reached.
 - e. Once the level is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
- j. All applicable equipment must not have any active alarms in order to initiate the transfer.
- (2) RECIRC:
 - a. The operator shall select a storage tank and enter a desired time duration setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
 - d. Once both opened, the transfer pump shall operate until the time duration has expired.
 - e. Once time expires, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
 - i. All applicable equipment must not have any active alarms in order to initiate the sequence.
- (3) DAY TANK FILL:
 - a. The operator shall select the source storage tank and enter a Stop weight setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
 - d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
 - e. Once the weight is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
 - i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
 - j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
 - k. All applicable equipment must not have any active alarms in order to initiate the transfer.
- j. Corrosion Inhibitor Feed Room Emergency Eyewash/Shower Flow Switch
 - 1) General: Used to detect an activation of the emergency eyewash/shower.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives: None

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Corrosion Inhibitor Feed Room Emergency Eyewash/Shower Activated
 - k. Corrosion Inhibitor Containment Area Wet Floor Switch
 - 1) General: Used to detect a Corrosion Inhibitor tank leak.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives: None
 - 4) Monitoring:
 - a) Local: None
 - b) PCS: None
 - 5) Alarms:
 - a) Local: None
 - b) PCS: Corrosion Inhibitor Containment Area Wet Floor Switch Activated
8. SODIUM HYDROXIDE CHEMICAL FEED SYSTEM
- a. Sodium Hydroxide Storage Tank 1 Level
 - 1) General: Used to continuously monitor the liquid level in Sodium Hydroxide Storage Tank 1.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Instantaneous level indication
 - b) PCS: Sodium Hydroxide Storage Tank 1 Level
 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Hydroxide Storage Tank 1 Level, Loss of Signal
 - b. Sodium Hydroxide Storage Tank 1 Outlet Valve
 - 1) General: Used to isolate Sodium Hydroxide Storage Tank 1 from the outlet header.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- c. Sodium Hydroxide Storage Tank 1 Recirc Valve
 - 1) General: Used to direct chemical to Sodium Hydroxide Storage Tank 1 from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- d. Sodium Hydroxide Transfer Pump
 - 1) General: Used to pump Sodium Hydroxide chemical between tanks.
 - 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
 - b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
 - (2) AUTO: Sodium Hydroxide Transfer Pump shall be automatically controlled via PLC programming. The pump

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

shall operate as called for by the Sodium Hydroxide Chemical Transfer Sequence.

- 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Alarm
 - b) PCS: Motor High Temperature, Motor Overload
- e. Sodium Hydroxide Day Tank Inlet Valve
- 1) General: Used to direct chemical to Sodium Hydroxide Day Tank from the transfer pump.
 - 2) Control:
 - a) Local: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the OPEN position, the actuator shall open. With the OPEN-REMOTE-CLOSE selector switch at the LCP in the CLOSE position, the actuator shall close.
 - b) PCS: With the OPEN-REMOTE-CLOSE selector switch at the LCP in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the actuator via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to open or close the valve.
 - (2) AUTO: The valve shall be automatically controlled via PLC programming. The valve shall open and close as called for by the Sodium Hydroxide Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Opened, Closed
 - b) PCS: Remote, Opened, Closed
 - 5) Alarms:
 - a) Local: None
 - b) PCS: None
- f. Sodium Hydroxide Day Tank High Level
- 1) General: Used to prevent overfilling the day tank.
 - 2) Control:
 - a) Local: None.
 - b) PCS: None.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Sodium Hydroxide Chemical Transfer Sequence.

- j. Sodium Hydroxide Chemical Transfer Sequence
 - 1) General: Used for automated control of transferring chemical between tanks.
 - 2) Control:
 - a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
 - b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
 - (1) TRANSFER:
 - a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
 - d. Once both opened, the transfer pump shall operate until the Stop level is reached.
 - e. Once the level is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
 - i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
 - j. All applicable equipment must not have any active alarms in order to initiate the transfer.
 - (2) RECIRC:
 - a. The operator shall select a storage tank and enter a desired time duration setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
 - d. Once both opened, the transfer pump shall operate until the time duration has expired.
 - e. Once time expires, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- 5) Alarms:
 - a) Local: None
 - b) PCS: Sodium Hydroxide Containment Area Wet Floor Switch Activated
- m. Sodium Hydroxide Feed Room Temperature
 - 1) General: Used to continuously monitor the temperature of the Sodium Hydroxide Feed Room.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) None
 - 4) Monitoring:
 - a) Local: Instantaneous temperature indication

 - 5) Alarms:
 - a) Local: None
 - b) PCS: High-High, High, Low, Low-Low Sodium Hydroxide Feed Room Temperature, Loss of Signal
- 9. ANTISCALANT CHEMICAL FEED SYSTEM
 - a. Antiscalant Transfer Pump
 - 1) General: Used to pump Antiscalant chemical between tanks.
 - 2) Control:
 - a) Local: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the LOCAL position, the operator shall have the ability to START and STOP the pump via the START/STOP pushbuttons.
 - b) PCS: With the LOCAL-OFF-REMOTE selector switch at the local control panel in the REMOTE position, the operator shall have the ability to select PC MANUAL or AUTO control of the pump via the HMI.
 - (1) PC MANUAL: The operator shall have the ability to manually start/stop the pump.
 - (2) AUTO: Antiscalant Transfer Pump shall be automatically controlled via PLC programming. The pump shall operate as called for by the Antiscalant Chemical Transfer Sequence.
 - 3) Logic Interlocks/Permissives:
 - a) Reference the Antiscalant Chemical Transfer Sequence.
 - 4) Monitoring:
 - a) Local: Running, Stopped
 - b) PCS: Running, Stopped, Remote
 - 5) Alarms:
 - a) Local: Alarm
 - b) PCS: Motor High Temperature, Motor Overload
 - b. Antiscalant Day Tank High Level
 - 1) General: Used to prevent overfilling the day tank.
 - 2) Control:
 - a) Local: None.
 - b) PCS: None.
 - 3) Logic Interlocks/Permissives:

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- a) Reference the Antiscalant Chemical Transfer Sequence.
- 4) Monitoring:
 - a) Local: None

- k. Sodium Hypochlorite Chemical Transfer Sequence
- 1) General: Used for automated control of transferring chemical between tanks.
 - 2) Control:
 - a) Local: The operator shall have the ability at the LCP to manually operate system equipment to transfer chemical.
 - b) PCS: The chemical transfer sequence shall automatically enable the piping path and start/stop and open/close devices as configured by an operator via the HMI. The operator shall choose the desired function by pressing the TRANSFER, RECIRC, or DAY TANK FILL pushbuttons on the HMI.
 - (1) TRANSFER:
 - a. The operator shall select the source Storage Tank, destination Storage Tank, and enter a Stop level setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the source tank outlet valve and destination tank recirc valve shall open.
 - d. Once both opened, the transfer pump shall operate until the Stop level is reached.
 - e. Once the level is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.
 - i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
 - j. All applicable equipment must not have any active alarms in order to initiate the transfer.
 - (2) RECIRC:
 - a. The operator shall select a storage tank and enter a desired time duration setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
 - d. Once both opened, the transfer pump shall operate until the time duration has expired.
 - e. Once time expires, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
 - i. All applicable equipment must not have any active alarms in order to initiate the sequence.
 - (3) DAY TANK FILL:

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- a. The operator shall select the source storage tank and enter a Stop level setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
 - d. Once both opened, the transfer pump shall operate until the Stop level is reached.
 - e. Once the level is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. Day Tank High Level Alarm must be inactive for the transfer pump to start.
 - i. Day Tank High Level Switch Alarm must be inactive for the transfer pump to start.
 - j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
 - k. All applicable equipment must not have any active alarms in order to initiate the transfer.
- l. Sodium Hypochlorite Dilution Control Loop
- 1) General: Used for automated control of adding dilution water to storage tanks to reduce the concentration of the solution.
 - 2) Control:
 - a) Local: The operator shall have the ability at the LCP to manually operate system equipment to add dilution water.
 - b) PCS: The operator shall be able to add dilution water automatically using PLC programming.
 - (1) Dilution Water Sequence:
 - a. The operator shall select which storage tanks to add dilution water to and enter a GALLONS setpoint.
 - b. The applicable Storage Tank Dilution Water Valves will open.
 - c. Once the GALLONS setpoint has been reached, the valves shall close.
 - d. Applicable Storage Tank(s) High Level Alarm(s) must be inactive for the sequence to start.
 - e. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
 - f. All applicable equipment must not have any active alarms in order to initiate the sequence.
- m. Sodium Hypochlorite Containment Area Wet Floor Switch
- 1) General: Used to detect a Sodium Hypochlorite tank leak.

 - e. Once the level is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The source storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. The destination storage tank High Level Alarm must be inactive for the transfer pump to start.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- i. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
- j. All applicable equipment must not have any active alarms in order to initiate the transfer.
- (2) RECIRC:
 - a. The operator shall select a storage tank and enter a desired time duration setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the storage tank outlet and recirc valves shall open.
 - d. Once both opened, the transfer pump shall operate until the time duration has expired.
 - e. Once time expires, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the sequence.
 - i. All applicable equipment must not have any active alarms in order to initiate the sequence.
- (3) DAY TANK FILL:
 - a. The operator shall select the source storage tank and enter a Stop weight setpoint.
 - b. The operator shall initiate the sequence by pressing the INITIATE TRANSFER pushbutton on the local control panel.
 - c. Once the button is pressed, the storage tank outlet valve and day tank inlet valve shall open.
 - d. Once both opened, the transfer pump shall operate until the Stop weight is reached.
 - e. Once the weight is reached, both valves shall travel closed.
 - f. Once either valve is closed, the transfer pump shall stop.
 - g. The storage tank Low-Low Level Alarm must be inactive for the transfer pump to start.
 - h. Day Tank High Weight Alarm must be inactive for the transfer pump to start.
 - i. Day Tank High Level Alarm must be inactive for the transfer pump to start.
 - j. All applicable equipment must be in REMOTE-AUTO mode in order to initiate the transfer.
 - k. All applicable equipment must not have any active alarms in order to initiate the transfer.
- j. Fluoride Containment Area Wet Floor Switch
 - 1) General: Used to detect a Fluoride tank leak.
 - 2) Control:
 - a) Local: None
 - b) PCS: None
 - 3) Logic Interlocks/Permissives: None

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- 4) Monitoring:
 - a) Local: None
 - b) PCS: None
- 5) Alarms:
 - a) Local: None
 - b) PCS: Fluoride Containment Area Wet Floor Switch Activated

12. EXISTING PROCESS CONTROL MODIFICATIONS

- a. Groundwater Wells
 - 1) General: Used to pump water to the NF Building Softening process.
 - 2) Control: Modify groundwater pumps to operate when NF Skids are being called to run.
 - a) AUTO: Wells shall be automatically controlled via PLC programming. Well's with VFD controllers shall have their speed varied to maintain an operator entered NF Bypass Header Pressure setpoint.
 - b) Groundwater pumps operating is a permissive in order for NF Skids to start.

13. EMERGENCY POWER

- a. Automatic Transfer Switch
 - 1) General: Used to automatically transfer plant power to generator during a utility power outage.
 - 2) Control:
 - a) Local: Per manufacturer
 - b) PCS: None
 - 3) Logic Interlocks/Permissives:
 - a) Generator running and Automatic Transfer Switch in the Emergency Source position will initiate step loading logic for loads to be sequentially started.
 - 4) Monitoring:
 - a) Local: Per manufacturer
 - b) PCS: Utility Source Available, Emergency Source Available, Utility Source Connected, Emergency Source Connected
 - 5) Alarms:
 - a) Local: Per manufacturer
 - b) PCS: Not in Auto

14. CRITICAL ALARMS

- a. General: Programming shall include the following as critical alarms. Critical alarms shall initiate a telephone call to designated personnel.
 - 1) Utility Power Failure
 - 2) PLC Failure Alarm
 - 3) Emergency NF Process Shutdown

3.2 EXAMINATION

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- A. Verification of Conditions: Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.
- B. Discrepancies: In the event any discrepancies are discovered, immediately notify the Owner's Representative in writing. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3.3 PREPARATION

- A. Protection
 1. All equipment and materials shall be packed at the factory to protect each item from damage during shipment and storage.
 2. Provide blocking and cushioning materials to prevent damage during shipment.
 3. Panel mounted instruments and equipment to be installed inside enclosures, panels, or consoles shall be mounted and assembled at the panel manufacturer's facility.

3.4 INSTALLATION

- A. General: Install equipment, as indicated, with manufacturer's written instructions and with recognized industry practices.

3.5 FIELD QUALITY CONTROL

- A. Inspection: Provide for services of a qualified representative of the manufacturer to inspect and approve installation.
- B. Tests: Upon completion of all inspections, and prior to acceptance, perform field tests outlined in Division 40 Section "Plant Instrumentation and Control System General Requirements".
- C. Operational Demonstration: After completion of the field test, perform a 30-day operational demonstration as specified in Division 40 Section "Plant Instrumentation and Control System General Requirements".

3.6 DEMONSTRATION

- A. General: When all required tests have been performed and prior to final acceptance, the Contractor shall perform a 30-day operational demonstration in accordance with the requirements of Division 40 Section "Plant Instrumentation and Control System General Requirements".

3.7 EXTRA MATERIALS

- A. Spare Parts: The Contractor shall provide uninstalled spare parts to the Owner to facilitate proper maintenance and minimize downtime of the PLC system.
- B. Quantity: Provide spares for each type of module listed below equal to 10 percent of the total of each type used in the system rounded up to the next whole number.
 1. Processor Modules
 2. Power Supply
 3. Digital Input Modules

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

4. Digital Output Modules
5. Analog Input Modules
6. Analog Output Modules
7. Analog Input/Analog Output Modules
8. Flex I/O Modules
9. Flex I/O Module Terminal Blocks

C. Provide (6) OIT protective screen overlays.

D. Replacements: Any spare part used during the start-up, demonstration, and warranty period shall be replaced by the Contractor at no cost.

3.8 PLC SYSTEM TRAINING

A. General.

1. Provide a training course customized for the control system hardware.
2. Provide training on the operation and maintenance of the control system hardware.
3. Provide training manuals for each attendee plus two additional manuals in archival preservation at the project site.
4. Include the following in each manual.
 - a. An agenda
 - b. Defined objectives for each lesson.
5. Provide all equipment, materials, and supplies used in the training.
6. For guidance in planning the required instruction, assume that attendees will have a high school education or equivalent and basic electrical maintenance knowledge.

B. Location, duration, and schedule.

1. Teach the course at the project site.
2. Provide one day of training for five personnel designated by the Owner.
3. Conduct training after completion of the Contractor's field testing.

3.9 INPUT/OUTPUT SCHEDULE

A. Abbreviations

1. AI = Analog Input
2. AO = Analog Output
3. CPU = Processor
4. DI = Digital Input
5. DO = Digital Output
6. RIO = Remote I/O Communications

B. Installed spare inputs and outputs (I/O): In addition to the I/O listed below, provide a minimum of 10 percent installed.

1. All SPARE I/O shall be wired to terminal blocks within the PLC enclosure.

TO ALL DOCUMENT HOLDERS:

Subject: WCWSD RARWTP Membrane Softening Upgrades

AECOM Job No.: 60551697

Enclosed herewith is a copy of Addendum No. 2 covering the subject project.

Please retain this with your Documents.

Sincerely,

AECOM

ADDENDUM TO THE
BIDDING DOCUMENTS
FOR:
Membrane Equipment Procurement

1.1 GENERAL

- A. This Addendum covers changes to the Documents and in closing the Contract will become a part thereof. Each Bidder shall include these items to the extent they affect his Bid.
- B. These items modify only the portion of the Documents specifically noted. All other wording and Drawings remain in effect.

1.2 CLARIFICATIONS

- A. The following is a list of clarifications regarding project documents. These clarifications include question received during the advertisement period:

Q: Is a performance or a payment bond required?

A: No, the Buyer (General Contractor) will hold the performance and payment bond. See revisions to the project manual below.

Q: Coded note no. 6 on sheet I-01 (RARWTP) indicates new I/O modules shall be 1769-IA16 and 1769-IF41 by Allen-Bradley. This contradicts Section 40 9443 (RARWTP and FAWTP), paragraph 2.1. Please confirm the requirements for the SCADA System PLC components.

A: SCADA System PLC components shall be in accordance with 40 9443 (RARWTP and FAWTP), paragraph 2.1. Coded note no. 6 on sheet I-01 (RARWTP) refers to an existing panel at the RARWTP.

1.3 PROJECT MANUAL

- A. Section 00 1113 – Advertisement for Bids

- 1. Section 2.

- a. Revise:

“Bids will be received by Engineer until May 18, 2020 @ 2:00 p.m. Bids shall be submitted via email or via hand delivery, USPS, UPS, or FedEx to: AECOM, ATTN: Matthew Noelker, P.E., 277 West Nationwide Blvd, Columbus, Ohio 43215, matthew.noelker@aecom.com” to read:

“Bids will be received by Engineer until May 18, 2020 @ 2:00 p.m Bids shall be submitted via email to matthew.noelker@aecom.com. A webex invitation will follow for interested parties to view the bid opening.”

- B. Section 00 5215 – Agreement Form

- 1. Paragraph 2.04.B – Add the following to the end of this paragraph:

“Total combined liquidated damages payable by Seller to Buyer shall not exceed 25% of the Contract Price.”

- C. Section 00 7000 – General Conditions

- 1. Paragraph 5.01 – Delete this paragraph.

2. Paragraph 7.07. Add the following as subparagraph C:
“Seller’s total limit of liability to the Buyer shall be limited to 1.5 times the total procurement contract value.”
- D. Section 46 6340 – Nanofiltration Membrane Equipment
1. Paragraph 2.11.A.2 – Add the following to this paragraph:
“SDI test apparatus shall consist of an isolation valve, pressure reducing valve (hand-operated, design to regulate from up to 150 psi to 30 psi), and an SDI pad holder.”
 2. RARWTP RO MEMBRANE EQUIPMENT SCHEUDLE, paragraph A. Add the following as subparagraph 3:
“Maximum feed pressure shall be no greater than 140 psi when operating with 35 psig of permeate backpressure on stage 1 of the array and 15 psig of permeate backpressure on stage 2 of the array.”
 3. FAWTP RO MEMBRANE EQUIPMENT SCHEDULE, paragraph A. Add the following as subparagraph 3:
“Maximum feed pressure shall be no greater than 140 psi when operating with 35 psig of permeate backpressure on stage 1 of the array and 15 psig of permeate backpressure on stage 2 of the array.”

SECTION 00 4113

BID FORM

TABLE OF CONTENTS

	Page
Article 1 – BID RECIPIENT	2
Article 2 – BIDDER’S ACKNOWLEDGMENTS	2
Article 3 – BIDDER’S REPRESENTATIONS.....	2
Article 4 – BASIS OF BID	3
Article 5 – TIME OF COMPLETION	7
Article 6 – BID DOCUMENTS.....	8
Article 7 – DEFINED TERMS	8
Article 8 – BID SUBMITTAL.....	9

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

ARTICLE 1 – BID RECIPIENT

1.01 This Bid is submitted to the Engineer via email or via hand delivery, USPS, UPS, or FedEx to:

AECOM
ATTN: Matthew Noelker, P.E.
277 West Nationwide Blvd
Columbus, Ohio 43215
Matthew.noelker@aecom.com

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into an Agreement with Buyer in the form included in the Bid Documents to furnish the Goods and Special Services as specified or indicated in the Bid Documents for the prices and within the times indicated in this Bid and in accordance with the other terms and conditions of the Bid Documents.

1.03 The Buyer of the Goods and Special Services will be the successful Bidder(s) (Contractor(s)) for the referenced Projects.

ARTICLE 2 – BIDDER’S ACKNOWLEDGMENTS

2.01 Bidder accepts all of the terms and conditions of the RFP.

2.02 Bidder accepts the provision of the Agreement as to liquidated damages in event of its failure to furnish the Goods and Special Services in accordance with the schedule set forth in the Agreement.

ARTICLE 3 – BIDDER’S REPRESENTATIONS

3.01 In submitting this Bid, Bidder represents that:

A. Bidder has examined and carefully studied the Bid Documents included with the RFP, other related data identified, and the following Addenda, receipt of which is hereby acknowledged:

<u>Addendum No.</u>	<u>Addendum Date</u>
1	5/7/2020
2	5/14/2020

B. Bidder has become familiar with and is satisfied as to the local conditions that may affect cost, progress, delivery, or the furnishing of Goods and Special Services.

C. Bidder is familiar with and is satisfied as to all federal, state and local Laws and Regulations that may affect cost, progress, and the furnishing of Goods and Special Services.

D. Bidder has carefully studied and correlated the information known to Bidder, and information and observations obtained from Bidder’s visits, if any, to the Point of Destination with the Bid Documents.

E. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Bid Documents, and the written resolution thereof by Engineer is acceptable to Bidder.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

- F. The Bid Documents are generally sufficient to indicate and convey understanding of all terms and conditions for furnishing the Goods and Special Services for which this Bid is submitted.
- G. Bidder further represents that this Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any agreement or rules of any group, association, organization or corporation; Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid; Bidder has not solicited or induced any individual or entity to refrain from Bid; and Bidder has not sought by collusion to obtain for itself any advantage over any other Bidder or over Buyer.

ARTICLE 4 – BASIS OF BID

ADD #1

- 4.01 Bidder will furnish the Goods and Special Services in accordance with these Contract Documents for the following price(s), which do not include sales tax. Prices shall be guaranteed until August 31, 2020. After this date, **if the Owner has not issued a Notice to Proceed to Buyer, and** if requested by the ~~Buyer~~ Seller and approved by the Owner, ~~Buyer's~~ Seller's proposed prices may be escalated by the monthly change of the U.S. Consumer Price Index (CPI) as calculated by the U.S. Bureau of Labor Statistics.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

RARWTP

ADD #1

Item No.	Description	Proposed Price
	SHOP DRAWINGS	
1.)	Shop Drawing Preparation	\$60,000.00
	EQUIPMENT	
2.)	Base Bid: Manufacturing of Goods—Epoxy Coated or FRP Frames Individual skids shall be delivered to the Point of Destination having been fully assembled, ready for installation, and having undergone factory acceptance testing prior to shipping. If skids are delivered not having been fully assembled, costs for such assembly shall be included under Item No. 3.	\$2,335,351.00
3.)	Base Bid: Assembly of Goods Onsite—Epoxy Coated or FRP Frames Include all costs for any required onsite assembly of goods except the following items which will be performed by the Buyer: unloading skids, setting/anchoring skids, making connections to General Contractor process piping, and making connections to Electrical Contractor power. All onsite labor wages shall be in accordance with Division 00, Section “Prevailing Wage Rate Requirements.	NA Fully Assembled and Skid Mounted except MCS per the specifications. Since MCS is being partially supplied by Contractor, they are responsible for installation.
4.)	Alternate Bid: Manufacturing of Goods—304 SST Frames (Item cost is additive or deductive from Item No. 2). Individual skids shall be delivered to the Point of Destination having been fully assembled, ready for installation, and having undergone factory acceptance testing prior to shipping. If skids are delivered not having been fully assembled, costs for such assembly shall be included under Item No. 3.	<u>Add</u> \$26,100.00
5.)	Alternate Bid: Assembly of Goods Onsite—304 SST Frames (Item cost is additive or deductive from Item No. 3). Include all costs for any required onsite assembly of goods except the following items which will be performed by the Buyer: unloading skids, setting/anchoring skids, making connections to General Contractor process piping, and making connections to Electrical Contractor power. All onsite labor wages shall be in accordance with Division 00, Section “Prevailing Wage Rate Requirements.	NA Fully Assembled and Skid Mounted except MCS per the specifications. Since MCS is being partially supplied by Contractor, they are responsible for installation.
	SPECIAL SERVICES	
6.)	Include costs required for all Special Services including startup and commissioning, remote monitoring, and field service agreement.	\$134,000.00

(Words)		(Figures)

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

4.02 Additional Proposed Costs:

Description	Proposed Price
The Seller’s monthly fee for storage of Goods at Seller’s facilities in the event that Buyer desires to delay shipment beyond the shipment date stated below in Article 5.02. Such fee shall include interest on money due Seller.	RARWTP: \$2500/month FAWTP: \$1500/month
The Seller’s monthly fee for Buyer delaying the initiation of manufacturing of Goods or for not executing the Procurement Agreement within the time specified in 4.03 below.	RARWTP: \$5500/month FAWTP: \$3500/month

4.03 Seller and Buyer shall execute the Procurement Agreement within 30 days after the Contractor’s/Buyer’s Notice to Proceed from the Owner. Should the Procurement Agreement not be executed within said 30 days due to the fault of the Buyer, the Buyer shall be subject to the prorated additional costs identified in Paragraph 4.02 above. Should the Procurement Agreement not be executed within the said 90 days due to the fault of the Seller, Seller shall be subject to the liquidated damages provisions in the Procurement Agreement. The issue of fault will be determined by the Engineer.

ARTICLE 5 – TIME OF COMPLETION

5.01 Bidder agrees that the furnishing of Goods and Special Services will conform to the schedules set forth below, which will be incorporated into Article 5 of the Agreement.

ADD #1

Description:	Proposed Number of Consecutive Calendar Days:
Time required by Seller to submit approvable Shop Drawings (consecutive calendar days after Notice to Proceed is issued to Buyer)	(maximum of 30 days)
Time required by Seller after receipt of approved Shop Drawings to deliver acceptable Goods to Point of Destination: Time required by Seller to deliver acceptable Goods to Point of Destination and complete assembly of goods onsite (consecutive calendar days after Notice to Proceed is issued by Buyer). (consecutive calendar days)	(maximum of 150 days)
Time required by Seller to complete assembly of goods onsite (exclude time for unloading skids, setting/anchoring skids, making connections to General Contractor process piping, and making connections to Electrical Contractor power)	
Time required by Seller to complete all Special Services (consecutive calendar days after notification from Buyer to	50 Days for Start-up & Commissioning 2 Years for Service Contract

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

Seller to commence such Special Services.):	
Time required by Seller to be ready for Final Inspection and Acceptance of all Goods and all Special Services (consecutive calendar days after notification from Buyer to Seller to commence such Special Services.):	60 Days for Start-up & Commissioning & Performance Testing. 2 Years for Service Contract

5.02 Bidder agrees that the prices in Article 4 above are based on the condition that shipment of goods may be delayed by the Buyer.

ARTICLE 6 – BID DOCUMENTS

6.01 The following documents are attached with and made a condition of this Bid:

- A. Attachment 1: Bidder Qualifications
- B. Attachment 2: Scope of Supply
- C. Attachment 3: OEM Special Services
- D. Attachment 4: OEM Warranty
- E. Attachment 5: Installation Instructions and Contractor’s Responsibilities
- F. Attachment 6: Spare Parts

ARTICLE 7 – DEFINED TERMS

7.01 The terms used in this Bid have the meanings indicated in the General Conditions. The significance of terms with initial capital letters is described in the General Conditions.

THIS SECTION IS BEING REVISED AND REISSUED AS PART OF ADD #1

ARTICLE 8 – BID SUBMITTAL

8.01 This Bid is submitted by:

If Bidder is:

About Us

History & Background

Founded in 1965, Wigen has evolved from a manufacturer's representative firm into a global leader of custom water treatment and purification systems. With several U.S. patents to its credit, Wigen continues to develop new methods aimed at recycling and recovering our most precious resource.

Wigen has fully integrated production and fabrication capabilities; outsourcing only blasting, painting and electropolishing services. Supported by teams of software developers, and mechanical, electrical and chemical engineers. Wigen's manufacturing group includes metalworking, welding, panel-building, pipefitting, cleanroom assembly, general fabrication and testing operations.

Our headquarters are located near Minneapolis, Minnesota, with operations in Chicago, Denver, New York, and Phoenix. Wigen currently markets to customers throughout North America, Europe and Asia.

Vision	Mission	Values
 <p>Pacing our stride to become the most trusted name in water treatment.</p>	 <p>To be a recognized leader in products, services and solutions that transform the way water is treated, utilized, reused and distributed.</p>	 <ul style="list-style-type: none">Integrity – Communicate openly.Satisfaction – Be responsive.Ownership – Be empowered.Teamwork – Support others.Commitment – Stay focused.Results – Provide value.Flexibility – Embrace change.Relationships – Build bridges.

"It's hard enough to win the first time. If the customer isn't satisfied, there won't be a second time."

- Jeff Wigen, President & CEO

Letter from the **CEO**

Dear Customer,

On behalf of all of us at Wigen Water Technologies, I want to personally thank you for the opportunity to provide this proposal for the WCWSD Membrane Equipment Procurement Bid. Our engineering team has carefully reviewed the drawings and specifications to be certain we fully understand the project scope. We recognize that details matter, and it starts with interpreting the requirements and carefully detailing our offer. Thus, you can be confident that our proposal identifies exactly what we intend to furnish, so as to reduce the prospect of expensive unknowns.

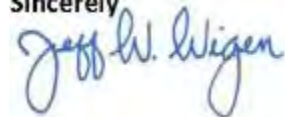

Since 1965, we have designed, built, and supported systems like that which is specified for this project. We literally have thousands of successful installations worldwide, including those for demanding markets such as municipal drinking water, nuclear power, desalination, oil & gas, etc. To be a recognized leader in this field, and have been in business for over 50 years, customer satisfaction is paramount. We're only as good as our last project, which is why quality is vitally important to client happiness.

To prove that being best-in-class truly matters, we've invested heavily in a comprehensive ISO 9001 quality management system. This requires action and accountability...all the time. We have very high standards for ourselves, because we know that contractors and end users expect nothing less.

I've grown up in the water business and continue to be involved with the day-to-day operations of the company, just as I have for the last 25 years. I say this because, as a consumer myself, I always feel better about a buying decision, knowing that the principal is actively involved in the business. While our phones are answered live 24/7/365, and our team takes great pride in serving our clients, I'm always available to help make certain your expectations have been met.

We hope to earn your business, and welcome the prospect of making this a successful project!

Sincerely

Jeff W. Wigen
President & CEO
Wigen Water Technologies

Your Project **Team**

The following members of our organization will be involved with the design, development and deployment of your project:

SALESPERSON - Mr. Eric Geibel, V.P. Business Development

With a B.S. in Business Administration from Clarkson University in 2002, Eric began his career in the water industry as a Sales Engineer at Pall. By 2007, he had become a technical expert for Pall's Aria MF/UF platforms, and managed sales representatives throughout the Western U.S. In 2008, Eric moved to Pall's office in Australia, where in 2012, he came National Sales Manager. With a desire to come back to the U.S., Eric began working for Veolia in 2013, selling evaporation and crystallization systems in Chicago. He joined Wigen in 2015, to return to his love of selling mainstream clean water technologies; with a particular interest in membrane treatment.

PRINCIPAL ENGINEER - Mr. Stacey Bickler, Director of Engineering

Mr. Bickler holds a B.S. in Chemical Engineering from the University of Minnesota. He began his career in the water field in 1999, as an applications engineer for GE Water Technologies. Within two years, he was promoted to project engineer in the phase-3 group, which included the custom equipment team. Mr. Bickler was the lead engineer for several large municipal projects including Clearwater, FL, Brazos River Authority – Granbury, TX, Gila Bend, AZ, Torrington, WY and Bonita Springs, FL to name a few. Mr. Bickler joined Wigen in 2003, and oversees all facets of daily operations, along with serving as the director of the Quality Management team.

PROCESS ENGINEER - Mr. Brandon Coombs, Project Engineer

Brandon became a member of the Wigen team in 2015, after having spent several years in various engineering roles at RWL Water. He obtained degrees in both chemistry and chemical engineering, from the University of Minnesota. Before beginning his career in the water field, he worked for 3M in its fire protection products laboratory. Brandon brings a great deal of unique experience to the engineering group at Wigen.

PROGRAMMING - Mr. Tim Bjornberg, Automation Engineer

Tim joined Wigen in 2011 after a successful tenure at Beef Products, Inc. in South Sioux City, Nebraska, where he worked as a master I&C engineer. He was responsible for managing the operation of sophisticated production equipment for six U.S. meat processing facilities, and has extensive experience with PLC & HMI programming. In the last five years, Tim has been involved with the commissioning activities of a wide variety high profile projects with Wigen.

MECHANICAL - Mr. Matt Harmon, Mechanical Designer

Mr. Harmon joined Wigen in 2010, after working several years as an instrument and controls technician in the power industry. He brings with him, considerable mechanical aptitude, outstanding troubleshooting skills and excellent knowledge of machine instrumentation. As part of the engineering team, Matt creates designs, develops bills of materials and does 3D CAD drawings.

PRODUCTION - Mr. Matt Keehan, Production Manager

Matt graduated in 2001, with a technical diploma in welding from Wisconsin Technical College. He began his career with Bassett Mechanical in Kaukauna, WI, where he obtained his 6G pipe certification. Mr. Keehan started with Wigen in 2011 as a TIG welder, and became an AWS Certified Welding Inspector, before transitioning to the position of Production Manager. He oversees all aspects of Wigen's production floor operations, including safety, workflow and product testing.

PROCUREMENT - Ms. Angela Christoffer, Purchasing Manager

Ms. Christoffer began her water career in 2005, by joining GE in a customer service role, within the custom equipment division. She eventually ascended to a management position, overseeing the flow of materials and resources allocated for projects. After her department was relocated from Minnesota to Canada, she joined Wigen as a project manager in 2013. Today, she is a vital link between vendors, customers and the production process.

CUSTOMER SERVICE - Ms. Andrea Kroska, Customer Care Coordinator

Andrea was hired in 2015, to bring her vast experience in managing and coordinating service activities. She obtained her Associate of Science degree in Contemporary Business from Inver Hills College, and has worked in a variety service related leadership roles throughout her career. Her current responsibilities include coordinating the schedules of the field service group and interfacing with clients seeking support.

TECHNICAL SUPPORT – Mr. Mark Roufs, Aftermarket Services Manager

Prior to joining Wigen in 2012, Mr. Roufs spent 21 years at Culligan, where he worked as a field service engineer for 15 years, followed by 6 years in industrial sales. His responsibility at Wigen, is to help ensure existing customers have access to the full breadth of technical support options. More specifically, Mr. Roufs ultimately handles inbound support inquiries and either addresses them himself or engages the help of other internal technical resources.

Detailed Scope of **Supply**

RARWTP Scope of Supply

Richard A. Renneker WTP (RARWTP)

Nanofiltration Membrane Equipment Scope of Supply:

NF Skid Design	Unit	Data
Number of NF Skids	No.	6
NF Membrane Modules	No.	DOW NF90
Configuration		2 Stage, 24:12, 7 long
Permeate Capacity	gpm	1030
Recovery Rate	%	80% (adjustable from 70% to 83%)
Flux	Gfd	14.7

Membrane Pressure Vessels	
Vessel Quantity	36 Per Train
Manufacturer / Model	Wave Cyber, WAVE-300P-8
Vessel Construction	FRP, 300 psig
Sample Ports	¼" sample valves
NF/RO Skids	
Skid Quantity	(6) with 36 housings per skid
Construction	Powder Coated Carbon Steel (Stainless Option Provided)
Dimensions (W x L x H) – approx.	95"x318"x150" (Approx. Dimensions)
Piping Materials	
NF Skid Inlet	Schedule 10 316 Stainless Steel
NF Skid Permeate	Schedule 80 PVC
NF Skid High Pressure Concentrate	Schedule 10 316 Stainless Steel
NF Skid Low Pressure Concentrate	Schedule 80 PVC

RARWTP NF SYSTEM SCOPE CONT'D

NF System Valves – All mounted on NF Skid	
NF Feed Valve	One (1) per skid, 10" Bray Series 41 Butterfly Valve w/ Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
NF Feed Isolation Valve	One (1) per skid, 10" Bray Series 41 Butterfly Valve w/ HWGO
NF Feed Drain Valve	One (1) per skid, 1.5" Flow-Tek S40 316SS Ball Valve w/ Lever
1 st Stage Cleaning Solution Feed Isolation	One (1) per skid, 8" Bray Series 41 Butterfly Valve w/ HWGO
Cleaning Solution Feed Isolation Valve	One (1) per skid, 8" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
1 st Stage Cleaning Solution Concentrate Return Isolation Valve	One (1) per skid, 8" Bray Series 41 Butterfly Valve w/ HWGO
1 st Stage Cleaning Solution Concentrate Return Block Valve	One (1) per skid, 6" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1 st Stage Cleaning Solution Concentrate Return Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
1 st Stage Concentrate Air Release Isolation Valve	One (1) per skid, 0.5" Flow-Tek S40 316SS Ball Valve w/ Lever
2 nd Stage Feed Isolation Valve	One (1) per skid, 6" Bray Series 41 Butterfly Valve w/ HWGO
2 nd Stage Cleaning Solution Feed Isolation	One (1) per skid, 6" Bray Series 41 Butterfly Valve w/ HWGO
2 nd Stage Concentrate Drain Valve	One (1) per skid, 1.0" Flow-Tek S40 316SS Ball Valve w/ Lever
Concentrate Throttling Valve	One (1) per skid, 3" Warren Controls Globe Valve, w/ AUMA 120VAC modulating electric actuator with position feedback
Concentrate Flush/Bypass Valve	One (1) per skid, 4" Bray Series 41 Butterfly Valve, with Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
2 nd Stage Concentrate Check Valve	One (1) per skid, 4" Ritepro 210 Series 316SS Wafer Check Valve
Final Concentrate Isolation Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1 st Stage Permeate Throttling Valve	One (1) per skid, 6" Flow-Tek V-Port Ball Valve w/ AUMA 120VAC modulating electric actuator with position feedback
1 st Stage Permeate Isolation	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO
2 nd Stage Permeate Isolation	One (1) per skid, 6" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO

Final Permeate Check Valve	One (1) per skid, 8" Ritepro 210 Series 316SS Wafer Check Valve
Final Permeate Isolation	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
Final Permeate Isolation	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO
Final Permeate Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
Permeate Dump Valve	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ Bray Series 93 pneumatic actuator and Series 54 prox. switch
Cleaning Solution Permeate Return Isolation Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Permeate Return Block Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Permeate Return Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
Final Concentrate / 1 st Stage CSCCR Interconnect Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1 st Stage Concentrate Air Release Valve	One (1) per skid, 0.5" Valmatic Air Release Valve, Series 15A
Sampling Valves	(42) per skid, Feed, Interstage, Concentrate, 1 st Stage Permeate, 2 nd Stage Permeate, Combined Permeate, each Housing Permeate— ¼" Labcock Valves, Panel Mounted
Pressure Vessel Permeate Probe	(36) per skid – ¼" Labcock Valves, end of Pressure vessels

RARWTP NF SYSTEM INSTRUMENTS

Conductivity Sensors	
Quantity	(4) Per Train – Feed, 1 st Stage Permeate, 2 nd Stage Permeate, Total Permeate
Manufacturer / Model	Rosemount 402VP with Retraction Assembly
Feed ORP Meter	
Quantity	(1) Per Train
Manufacturer / Model	Rosemount 389VP with Panel Mounted Low Flow Cell
Analytical Transmitter	
Quantity	(3) Per Train
Manufacturer / Model	Rosemount 1056 2-Channel Transmitter
Mag Flow Meters	
Quantity	(3) Per Train – Feed, Interstage, Concentrate
Manufacturer / Model	Siemens 5100 Series Magnetic Flow Meter with Remote Transmitter
Pressure Transmitters / Switches	
Quantity	(5) Per Train – Feed, Interstage, Concentrate, Stage 1 Permeate, Final Permeate
Manufacturer / Model	United Electric Controls, One Series
Pressure Gauges	
Quantity	(4) Per Train – NF Control Panel, Concentrate, 1 st Stage Permeate, Final Permeate
Manufacturer / Model	Ashcroft / 4.5" 1279 Duragauge, Panel Mounted
Loose Differential Pressure Transmitters	
Quantity	(2) For Degasifier Blower Intakes
Manufacturer / Model	United Electric Controls, One Series
Loose Paddlewheel Flow Meter	
Quantity	(1) – Downstream of Cartridge Filters
Manufacturer / Model	8" Seametrics IP800 Series

RARWTP UTILITY REQUIREMENTS & CONNECTIONS (by contractor, Each Skid)

NF Feed Inlet	10" 150# RF Flange
MCS Inlet	8" 150# RF Flange
Permeate Dump	8" 150# RF Flange
Permeate to Clearwell	8" 150# RF Flange
Permeate to CIP	4" 150# RF Flange
Concentrate to Waste	4" 150# RF Flange
Concentrate to CIP	8" 150# RF Flange
Sample Trough Drain	2.0" FNPT
Power Requirements	120 V / 1 Phase / 60 HZ / 15 A
Instrument Air Inlet	0.5" FNPT, 1 CFM @ 80 PSI Minimum

ITEMS TO BE SUPPLIED BY OTHERS

- Communications wiring from all RO skid Control Panels to the Master PLC/SCADA System.
- Power wiring to all PLC Panels and Remote I/O panels.
- Off-loading and installation of the skid systems and loose items (including membranes) required for full operation of the system.
- Installation of piping between skids.
- Air piping for instrument air to all skids.
- Skid Anchor Bolts.

RARWTP CIP System

CIP Tank Instruments (Loose)	
Tank Level Control	(4) Level Switches – ITT Flygt ENM-10
CIP Tank Heater (Loose)	
Quantity	Two (2) One Per Tank
Manufacturer	Chromolox,
Type / Size	Flanged Immersion / 120 kW, 75kW
CIP pH Sensor (Loose)	
Quantity	Two (2) One Per Tank
Manufacturer / Model	Rosemount 389VP
Analytical Transmitter (Loose)	
Quantity	One (1)
Manufacturer / Model	Rosemount 1056 2-Channel Transmitter
CIP Temperature Gauge (Loose)	
Manufacturer / Model	Wika TI30
Controls/Electrical (Loose)	
Local Control Panel	MCS Remote I/O Control Panel

CIP ITEMS TO BE SHIPPED “LOOSE”

- CIP Tank Level Instruments
- CIP pH Instruments and Transmitter
- CIP Temperature Indicator
- CIP Tank Heaters

**Water.
Process.

RARWTP NF System Controls: Wigen Water Technologies will provide a new ControlLogix PLC system to control the Nanofiltration (NF) system housed in the NF Main PLC Control Panel. Each NF skid and the Membrane Cleaning System (MCS) skid will be supplied with a ControlLogix Ethernet remote I/O rack along with a 15" PanelView Plus 7 operator interface. Each control panel will be supplied with a minimum of 10% spare I/O points as well as adequate space to add I/O modules if required. Skid mounted control panels will be factory wired to devices on the skids. Wiring between the NF Main PLC Control Panel and remote I/O panels and to any field mounted or loose supplied devices is to be by others. Motor controls (VFDs, starters, etc.) will be controlled from the NF system. The control panels and main components being supplied are detailed below.

Main PLC/HMI Control Panel Features: Supplied loose for installation by contractor
<p>(1) NF Main PLC Control Panel (PLC-NF)</p> <ul style="list-style-type: none">• (1) Saginaw NEMA 4X 304 Stainless Steel Wall-Mount Enclosure<ul style="list-style-type: none">○ Approximate Dimensions: 90x36x24• (1) Saginaw Enclosure Sub Panel• (1) Saginaw SCE Series Enclosure Heater• (4) Hoffman AHCI Series Corrosion Inhibitor• (1) Saginaw Enclosure LED Light Kit• (1) Liebert GXT5 Series Uninterruptable Power Supply• (1) Phoenix Contact 120VAC 480W Power Supply• (1) Allen-Bradley ControlLogix PLC System<ul style="list-style-type: none">○ (1) Allen-Bradley 1756-A17 Chassis○ (1) Allen-Bradley 1756-PA75/B Power Supply○ (1) Allen-Bradley 1756-L81E Processor○ (5) Allen-Bradley 1756-N2 Slot Filler Module○ (2) Allen-Bradley 1756-IA16I 16-Point Digital Input Module○ (1) Allen-Bradley 1756-OW16I 16-Point Digital Output Module• (1) Stratix 5700, 10-Port Managed Ethernet Switch• (LOT) Allen-Bradley Circuit Breakers, Relays, Terminal Blocks• (LOT) Din Rail, Wireway, Etc.• All I/O and Relay Contacts Wired to Terminal Blocks• Supplied Loose for Contractor Installation

 - (2) Allen-Bradley 1756-IA16I 16-Point Digital Input Module
 - (1) Allen-Bradley 1756-OW16I 16-Point Digital Output Module
 - (1) Allen-Bradley 1756-IF8I 8-Point Analog Input Module
 - (3) Allen-Bradley 1756-N2 Slot Filler Module
- (1) Allen-Bradley PanelView Plus 7 Series 15" Operator Interface
- (1) Stratix 5700, 10-Port Managed Ethernet Switch
- (LOT) Allen-Bradley Circuit Breakers, Relays, Terminal Blocks
- (LOT) Fuses, Din Rail, Wireway, Etc.
- All I/O and Relay Contacts Wired to Terminal Blocks

(1) MSC Motor Control: Provided Loose for Contractor Installation

- (2) 60HP Allen-Bradley Powerflex 753 VFDs
- (1) 210A Allen-Bradley Motor Contactor for Stage 1 Immersion Heater
- (1) 140A Allen-Bradley Motor Contactor for Stage 2 Immersion Heater
- (LOT) Allen-Bradley Circuit Breakers, Relays, Terminal Blocks
- (LOT) Fuses, Din Rail, Wireway, Etc.
- All Relay Contacts Wired to Terminal Blocks

FAWTP Scope of Supply

Franklin Area Water Treatment Plant (FAWTP)

Nanofiltration Membrane Equipment Scope of Supply:

NF Skid Design	Unit	Data
Number of NF Skids	No.	3
NF Membrane Modules	No.	DOW NF90
Configuration		2 Stage, 27:14, 7 long
Permeate Capacity	gpm	1198
Recovery Rate	%	80% (adjustable from 70% to 83%)
Flux	Gfd	15

Membrane Pressure Vessels	
Vessel Quantity	41 Per Train
Manufacturer / Model	Wave Cyber, WAVE-300P-8
Vessel Construction	FRP, 300 psig
Sample Ports	¼" sample valves
NF/RO Skids	
Skid Quantity	(3) with 41 housings per skid
Construction	Powder Coated Carbon Steel (Stainless Option Provided)
Dimensions (W x L x H) – approx.	95"x318"x150" (Approx. Dimensions)
Piping Materials	
NF Skid Inlet	Schedule 10 316 Stainless Steel
NF Skid Permeate	Schedule 80 PVC
NF Skid High Pressure Concentrate	Schedule 10 316 Stainless Steel
NF Skid Low Pressure Concentrate	Schedule 80 PVC

FAWTP NF SYSTEM SCOPE CONT'D

NF System Valves – All mounted on NF Skid	
NF Feed Valve	One (1) per skid, 10" Bray Series 41 Butterfly Valve w/ Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
NF Feed Isolation Valve	One (1) per skid, 10" Bray Series 41 Butterfly Valve w/ HWGO
NF Feed Drain Valve	One (1) per skid, 1.5" Flow-Tek S40 316SS Ball Valve w/ Lever
Permeate Flush Isolation Valve	One (1) per skid, 10" Bray Series 41 Butterfly Valve w/ Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
Permeate Flush Drain Valve	One (1) per skid, 1.5" Flow-Tek S40 316SS Ball Valve w/ Lever
1 st Stage Cleaning Solution Feed	One (1) per skid, 8" Bray Series 41 Butterfly Valve w/ HWGO
Cleaning Solution Feed Isolation Valve	One (1) per skid, 8" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
1 st Stage Cleaning Solution Concentrate Return Isolation Valve	One (1) per skid, 8" Bray Series 41 Butterfly Valve w/ HWGO
1 st Stage Cleaning Solution Concentrate Return Block Valve	One (1) per skid, 6" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1 st Stage Cleaning Solution Concentrate Return Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
1 st Stage Concentrate Air Release Isolation Valve	One (1) per skid, 0.5" Flow-Tek S40 316SS Ball Valve w/ Lever
2 nd Stage Feed Isolation Valve	One (1) per skid, 6" Bray Series 41 Butterfly Valve w/ HWGO
2 nd Stage Cleaning Solution Feed Isolation	One (1) per skid, 6" Bray Series 41 Butterfly Valve w/ HWGO
2 nd Stage Concentrate Drain Valve	One (1) per skid, 1.0" Flow-Tek S40 316SS Ball Valve w/ Lever
Concentrate Throttling Valve	One (1) per skid, 3" Warren Controls Globe Valve, w/ AUMA 120VAC modulating electric actuator with position feedback
Concentrate Flush/Bypass Valve	One (1) per skid, 4" Bray Series 41 Butterfly Valve, with Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
2 nd Stage Concentrate Check Valve	One (1) per skid, 4" Ritepro 210 Series 316SS Wafer Check Valve
Final Concentrate Isolation Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1 st Stage Permeate Throttling Valve	One (1) per skid, 6" Flow-Tek V-Port Ball Valve w/ AUMA 120VAC modulating electric actuator with position feedback
1 st Stage Permeate Isolation Valve	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO
2 nd Stage Permeate Isolation Valve	One (1) per skid, 6" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO

FAWTP NF SYSTEM SCOPE CONT'D

Final Permeate Check Valve	One (1) per skid, 8" Ritepro 210 Series 316SS Wafer Check Valve
Final Permeate Isolation Valve	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ Bray Series 93 pneumatic actuator and Bray Series 54 prox. switch
Final Permeate Block Valve	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ HWGO
Final Permeate Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
Permeate Dump Valve	One (1) per skid, 8" Bray Series 31 Butterfly Valve, Nylon 11 coated w/ Bray Series 93 pneumatic actuator and Series 54 prox. switch
Cleaning Solution Permeate Return Isolation Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Permeate Return Block Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
Cleaning Solution Permeate Return Bleed Valve	One (1) per skid, 0.5" Hayward TBH Series PVC Ball Valve w/ Handle Operator
Final Concentrate / 1 st Stage CSCCR Interconnect Valve	One (1) per skid, 4" Hayward BYV Series PVC Butterfly Valve, w/ HWGO
1 st Stage Concentrate Air Release Valve	One (1) per skid, 0.5" Valmatic Air Release Valve, Series 15A
Sampling Valves	(47) per skid, Feed, Interstage, Concentrate, 1 st Stage Permeate, 2 nd Stage Permeate, Combined Permeate, each Housing Permeate— ¼" Labcock Valves, Panel Mounted
Pressure Vessel Permeate Probe	(41) per skid – ¼" Labcock Valves, end of Pressure vessels

FAWTP NF SYSTEM INSTRUMENTS

Conductivity Sensors	
Quantity	(4) Per Train – Feed, 1 st Stage Permeate, 2 nd Stage Permeate, Total Permeate
Manufacturer / Model	Rosemount 402VP with Retraction Assembly
Feed ORP Meter	
Quantity	(1) Per Train
Manufacturer / Model	Rosemount 389VP with Panel Mounted Low Flow Cell
Analytical Transmitter	
Quantity	(3) Per Train
Manufacturer / Model	Rosemount 1056 2-Channel Transmitter
Mag Flow Meters	
Quantity	(3) Per Train – Feed, Interstage, Concentrate
Manufacturer / Model	Siemens 5100 Series Magnetic Flow Meter with Remote Transmitter
Pressure Transmitters / Switches	
Quantity	(5) Per Train – Feed, Interstage, Concentrate, Stage 1 Permeate, Final Permeate
Manufacturer / Model	United Electric Controls, One Series
Pressure Gauges	
Quantity	(4) Per Train – NF Control Panel, Concentrate, 1 st Stage Permeate, Final Permeate
Manufacturer / Model	Ashcroft / 4.5" 1279 Duragauge, Panel Mounted
Loose Paddlewheel Flow Meter	
Quantity	(1) – Downstream of Cartridge Filters
Manufacturer / Model	8" Seametrics IP800 Series

FAWTP UTILITY REQUIREMENTS & CONNECTIONS (by contractor, Each Skid)

NF Feed Inlet	10" 150# RF Flange
MCS Inlet	8" 150# RF Flange
Permeate Dump	8" 150# RF Flange
Permeate to Clearwell	8" 150# RF Flange
Permeate to CIP	4" 150# RF Flange
Concentrate to Waste	4" 150# RF Flange
Concentrate to CIP	8" 150# RF Flange
Sample Trough Drain	2.0" FNPT
Power Requirements	120 V / 1 Phase / 60 HZ / 15 A
Instrument Air Inlet	0.5" FNPT, 1 CFM @ 80 PSI Minimum

ITEMS TO BE SUPPLIED BY OTHERS

- Communications wiring from all RO skid Control Panels to the Master PLC/SCADA System.
- Power wiring to all PLC Panels and Remote I/O panels.
- Off-loading and installation of the skid systems and loose items (including membranes) required for full operation of the system.
- Installation of piping between skids.
- Air piping for instrument air to all skids.
- Skid Anchor Bolts.

FAWTP CIP System

CIP Tank Instruments (Loose)	
Tank Level Control	(4) Level Switches – ITT Flygt ENM-10
CIP Tank Heater (Loose)	
Quantity	Two (2) One Per Tank
Manufacturer	Chromolox,
Type / Size	Flanged Immersion / 120 kW, 75kW
CIP pH Sensor (Loose)	
Quantity	Two (2) One Per Tank
Manufacturer / Model	Rosemount 389VP
Analytical Transmitter (Loose)	
Quantity	One (1)
Manufacturer / Model	Rosemount 1056 2-Channel Transmitter
CIP Temperature Gauge (Loose)	
Manufacturer / Model	Wika TI30
Controls/Electrical (Loose)	
Local Control Panel	MCS Remote I/O Control Panel

FAWTP CIP SYSTEM CONT'D

CIP ITEMS TO BE SHIPPED "LOOSE"

- CIP Tank Level Instruments
- CIP pH Instruments and Transmitter
- CIP Temperature Indicator
- CIP Tank Heaters

FAWTP PERMEATE FLUSH SYSTEM

Permeate Flush Tank Level Transmitter (Loose)	
Quantity	One (1)
Manufacturer / Model	Dwyer Instruments – PBLT2

PERMEATE FLUSH ITEMS TO BE SHIPPED "LOOSE OR BY OTHERS"

- Permeate Flush Tank Level Transmitter

FAWTP NF System Controls: Wigen Water Technologies will provide a new ControlLogix PLC system to control the Nanofiltration (NF) system housed in the NF Main PLC Control Panel. Each NF skid and the Membrane Cleaning System (MCS) skid will be supplied with a ControlLogix Ethernet remote I/O rack along with a 15" PanelView Plus 7 operator interface. Each control panel will be supplied with a minimum of 10% spare I/O points as well as adequate space to add I/O modules if required. Skid mounted control panels will be factory wired to devices on the skids. Wiring between the NF Main PLC Control Panel and remote I/O panels and to any field mounted or loose supplied devices is to be by others. Motor controls (VFDs, starters, etc.) will be controlled from the NF system. The control panels and main components being supplied are detailed below.

(1) Main PLC/HMI Control Panel Features: Supplied loose for installation by contractor

- (1) Saginaw NEMA 4X 304 Stainless Steel Wall-Mount Enclosure
 - Approximate Dimensions: 90x36x24
- (1) Saginaw Enclosure Sub Panel
- (1) Saginaw SCE Series Enclosure Heater
- (4) Hoffman AHCI Series Corrosion Inhibitor
- (1) Saginaw Enclosure LED Light Kit
- (1) Liebert GXT5 Series Uninterruptable Power Supply
- (1) Phoenix Contact 120VAC 480W Power Supply
- (1) Allen-Bradley ControlLogix PLC System
 - (1) Allen-Bradley 1756-A17 Rack
 - (1) Allen-Bradley 1756-PA75/B Power Supply
 - (1) Allen-Bradley 1756-L81E Processor
 - (5) Allen-Bradley 1756-N2 Slot Filler Module
 - (2) Allen-Bradley 1756-IA16I 16-Point Digital Input Module
 - (1) Allen-Bradley 1756-OW16I 16-Point Digital Output Module
- (1) Stratix 5700, 10-Port Managed Ethernet Switch
- (LOT) Allen-Bradley Circuit Breakers, Relays, Terminal Blocks
- (LOT) Din Rail, Wireway, Etc.
- All I/O and Relay Contacts Wired to Terminal Blocks
- Supplied Loose for Contractor Installation

FAWTP NF SYSTEM CONTROLS CONT'D

(3) NF Remote I/O Control Panel

- (1) Saginaw NEMA 4X 304 Stainless Steel Wall-Mount Enclosure
 - Approximate Dimensions: 48x36x12
- (1) Saginaw Enclosure Sub Panel
- (1) Saginaw SCE Series Enclosure Heater
- (1) Saginaw Enclosure LED Light Kit
- (4) Hoffman AHCI Series Corrosion Inhibitor
- (1) Liebert GXT5 Series Uninterruptable Power Supply
- (1) Phoenix Contact 120VAC 480W Power Supply
- (1) Allen-Bradley ControlLogix Ethernet Remote I/O System
 - (1) Allen-Bradley 1756-EN2TR Ethernet Communication Module
 - (1) Allen-Bradley 1756-A17 Chassis
 - (1) Allen-Bradley 1756-PA75/B Power Supply
 - (2) Allen-Bradley 1756-IA16I 16-Point Digital Input Module
 - (1) Allen-Bradley 1756-OW16I 16-Point Digital Output Module
 - (3) Allen-Bradley 1756-IF8I 8-Point Analog Input Module
 - (1) Allen-Bradley 1756-OF8I 8-Point Analog Output Module
 - (3) Allen-Bradley 1756-N2 Slot Filler Module
- (1) Allen-Bradley PanelView Plus 7 Series 15" Operator Interface
- (4) Numatics 501 Series Solenoid Valves for Valve Actuation
- (1) Stratix 5700, 10-Port Managed Ethernet Switch
- (LOT) Allen-Bradley Circuit Breakers, Relays, Terminal Blocks
- (LOT) Fuses, Din Rail, Wireway, Etc.
- All I/O and Relay Contacts Wired to Terminal Blocks
- Supplied Installed on NF Skids

FAWTP NF SYSTEM CONTROLS CONT'D

(1) MCS / Flush Remote I/O Control Panel: Supplied Loose for Installation by Contractor

- (1) Saginaw NEMA 4X 304 Stainless Steel Wall-Mount Enclosure
 - Approximate Dimensions: 48x36x12
- (1) Saginaw Enclosure Sub Panel
- (1) Saginaw SCE Series Enclosure Heater
- (1) Saginaw Enclosure LED Light Kit
- (4) Hoffman AHCI Series Corrosion Inhibitor
- (1) Liebert GXT5 Series Uninterruptable Power Supply

Pricing and **Commercial Terms**

PRICING

Pricing provided on Bid Form.

PREFERRED PAYMENT TERMS

PLEASE SEE ATTACHMENT 7: Deducts, Clarifications, Exceptions

PRICING NOTES

- All prices are quoted in USD.
- No sales or value added tax is included.
- The customer will pay all applicable local, state, provincial or federal taxes and duties.
- The equipment delivery date, start date, and date of commencement of operations are to be negotiated.
- This proposal supersedes all previous proposals and correspondence.
- This proposal, including all terms and conditions contained herein, shall become part of any resulting contract or purchase order.
- Seller's price and delivery schedule are based on the assumption that Buyer will take delivery as per the agreed delivery schedule in the Agreement. If there is a subsequent change in the schedule, the Parties must agree in advance an alternative place of delivery, failing which the Seller will be entitled to ship the equipment to storage. Buyer shall issue a change order to take into account any additional cost of delay incurred by Seller in implementing this change.

CONDITIONAL OFFERING

Customer understands that this proposal has been issued based upon the information provided by customer, and currently available to WWT at the time of issuing this proposal. Any changes or discrepancies in site conditions, including but not limited to system influent water characteristics, changes in environmental health and safety conditions, Customer financial standing, Customer requirements, or any other relevant change, or discrepancy in, the factual basis upon which this proposal was created, may lead to changes in the offering, including but not limited to changes in pricing, warranties, quoted specifications, or terms and conditions.

Limited Mechanical Equipment **Warranty**

Wigen Companies, Inc., d/b/a Wigen Water Technologies, referred to hereinafter as "WWT," warrants that for a period of 18 months from the date of shipment or 12 months from System Acceptance [whichever occurs sooner] any equipment or other product it manufactures: (1) Will be free of defects in material and workmanship, and, (2) if WWT has recommended or manufactured a specific product based on written plans and specifications or a written statement of requirements provided by Buyer, that the product will be fit for the purpose identified in such written plans, specifications, or statement of requirements; provided, however, that such warranties shall be void if the product is not installed, operated or used in accordance with WWT's written instructions (including, without limitation, installation and operating instructions and manuals). **THE FOREGOING WARRANTIES ARE IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED AND WWT EXPRESSLY DISCLAIMS ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.** The foregoing warranties apply only to the original purchaser, and do not extend to any subsequent owner.

WWT'S LIABILITY UPON THE FOREGOING WARRANTIES SHALL BE LIMITED TO, AT WWT'S OPTION, REPAIRING OR REPLACING THE DEFECTIVE EQUIPMENT OR COMPONENTS THEREOF WITHOUT CHARGE, F.O.B. WWT'S FACTORY. Buyer shall provide WWT with reasonable opportunities to make inspections, tests, and repairs using the most cost effective methods available. Without limiting the foregoing, WWT disclaims any and all liability for penalties, special or punitive damages, damages for loss of profits or business, lost revenues, loss of use of the product or any associated equipment, cost of capital, facilities or services, down-time, shut-down or slow-down costs, or any other economic losses or property damage. Buyer shall indemnify WWT against any and all losses, liabilities, damages and expenses (including attorneys' fees or any costs required to defend any legal action) based on defects that are proven not to be the fault or negligence of WWT. WWT will not be liable for damage or wear to products or materials due to or caused by abnormal operating conditions, accident, abuse, misuse, unauthorized alteration or repair, if the product was not installed or applied in accordance with WWT's installation or operating instructions, or, if WWT recommended or manufactured a specific product based on plans and specifications or stated requirements provided by Buyer, if Buyer deviates from the plans and specifications or stated requirements that were provided to WWT. No allowance will be made for repairs or alterations made without WWT's written consent or approval, and any such repairs made without WWT's written consent or approval will render the warranties null and void. No equipment shall be returned to WWT without first obtaining WWT's prior written authorization. If it is determined that WWT is not responsible under the terms of this agreement for any such inspections, tests, repairs or replacements, the Buyer shall pay WWT for such inspections, tests, repairs and replacements at WWT's prevailing rates in effect from time to time.

MEMBRANES AND MEDIA PRODUCTS ARE COVERED BY WWT, BUT ONLY TO THE EXTENT THAT COVERAGE IS OFFERED BY THE ORIGINAL EQUIPMENT MANUFACTURER (OEM) OF SUCH PRODUCTS, AND WWT DOES NOT PROVIDE ANY WARRANTIES OR REMEDIES BEYOND THAT WHICH IS EXPRESSLY STATED IN THE OEM'S OWN WARRANTY DOCUMENTS.

To obtain warranty service for WWT products, the defective product must be returned to WWT together with proof of purchase, installation date, failure date, and supporting technical data. Any defective product returned to the factory must be sent freight prepaid. Documentation supporting the warranty claim and a Returned Material Authorization (RMA) number must be included. Contact your WWT salesperson for details on obtaining a RMA number.

SERVICES: Any services WWT hereafter provides with respect to products purchased from WWT or others, whether directly or through subcontractors, shall be performed in accordance with the standard of care with which such services are normally provided in the industry. If the services fail to meet the applicable industry standard, and WWT receives notice of such failure within 365 days from the date of completion, WWT will re-perform such services at no cost to Buyer. **RE-PERFORMANCE OF SERVICES SHALL BE BUYER'S SOLE AND EXCLUSIVE REMEDY, AND IN NO EVENT WILL WWT BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, SPECIAL OR OTHER DAMAGES (EVEN IF WWT HAS BEEN MADE AWARE OF THE POSSIBILITY OF SUCH DAMAGES), NOR, IN ANY EVENT, SHALL WWT'S WARRANTY OBLIGATIONS WITH RESPECT TO SERVICES EXCEED 100% OF THE TOTAL COST OF THE SERVICES PROVIDED.**

WARRANTY PERIODS: EVERY CLAIM BY BUYER ALLEGING A DEFECT IN ANY GOODS AND/OR SERVICES PROVIDED SHALL BE DEEMED WAIVED UNLESS SUCH CLAIM IS MADE IN WRITING WITHIN THE APPLICABLE WARRANTY PERIOD AS SET FORTH ABOVE. Provided, however, if a defect in any product manufactured by WWT is latent and not discoverable within the warranty period applicable thereto, any claim arising on account of such latent defect shall be deemed waived unless it is made in writing within a reasonable time, not exceeding 30 days, after such latent defect is or should have been discovered by Buyer.

Limitations / Exclusions: The warranties herein shall not apply to, and WWT shall not be responsible for, any damage to the goods or failure of the services supplied hereunder, to the extent caused by Buyer's neglect, failure to follow operational and maintenance procedures, or the use of technicians not specifically authorized by WWT to maintain or service its equipment. Before receiving the final drawings, programming and intangible property provided by WWT, the Owner shall agree in writing, to hold WWT harmless for subpar performance and/or damage to the equipment, related to changes made without the express written consent of WWT. **THE WARRANTIES AND REMEDIES CONTAINED HEREIN ARE IN LIEU OF AND EXCLUDE ALL OTHER WARRANTIES AND REMEDIES, WHETHER EXPRESSED OR IMPLIED BY OPERATION OF LAW OR OTHERWISE, INCLUDING ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A SPECIFIC PURPOSE.**

Attachment 3: OEM Special Services

Richard A. Renneker WTP (RARWTP) Special Services

MAN DAYS INCLUDED	SERVICES PROVIDED
10	Equipment Installation Support: Two Service Personnel for one week (5 Days). Includes on-site time to oversee and assist with the installation of the Wigen supplied equipment. Including, placement of the individual process skids, controls integration, and module installation.
30	Equipment Start-up & Commissioning: Two Service Personnel for three weeks (15 Days). Includes preparing the equipment to operate (rinse, backwash, steam, regenerate, etc.), testing control sequences, fully operating the system to achieve performance objectives, filling out commissioning data sheets.
12	Performance Testing: Includes site time for the 4 day (2 skids at once) performance testing period per the specification. During the performance test Wigen will have a service tech on-site and monitor the system remotely as needed.
5	Operator Training: Includes training on Wigen supplied equipment.
14	Service Agreement & Remote Monitoring: Per the specification, Wigen will provide an ongoing service contract comprised of 2 trips for 4 days each and 2 CIP trips for 3 days each.

If additional days are required because site/contractor is unprepared or there are unforeseen customer delays, these additional days will be billed at \$1500 per day plus per diem, lodging and travel expenses.

Before receiving the final drawings, programming and intangible property provided by WWT, the Owner shall agree in writing, to hold WWT harmless for subpar performance and/or damage to the equipment, related to changes made without the express written consent of WWT. **THE WARRANTIES AND REMEDIES CONTAINED HEREIN ARE IN LIEU OF AND EXCLUDE ALL OTHER WARRANTIES AND REMEDIES, WHETHER EXPRESSED OR IMPLIED BY OPERATION OF LAW OR OTHERWISE, INCLUDING ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A SPECIFIC PURPOSE.**

System Warranty

Warren County, OH – RARWTP – REV 5/14/20

FilmTec™ Reverse Osmosis / Nanofiltration Element(s)

Three-Year Limited SYSTEM Warranty

LIMITED WARRANTIES

DuPont provides limited warranties covering the materials, workmanship and performance of its spiral-wound FilmTec™ reverse osmosis / nanofiltration elements^{1,2} (“Element(s)”), when installed, operated and maintained by Customer in accordance with the terms and conditions set forth in this Warranty document and in accordance with DuPont published documentation*. The warranties herein set forth are granted to the Customer by the legal entity of the DuPont group of companies that is selling the Elements to the Customer (“Supplier”) and the Customer sole remedy under these warranties shall be against the Supplier. By accepting this Warranty document, the Customer agrees to the terms and conditions set forth herein.

1. Elements used in food or dairy applications, residential, specialty applications and sulfate removal are not covered by this warranty.
2. Nanofiltration elements shall be tested on magnesium sulfate when determining salt passage.

Limited Materials and Workmanship Warranty **(“Workmanship Warranty”)**

Supplier warrants that the Element(s) are free from defects in materials and workmanship which might prevent the Element(s) to be installed, operated and maintained in accordance with DuPont’s published literature. This Workmanship Warranty shall be effective during the period beginning on the date of delivery of any such Element(s) to carrier at shipping point (manufacturing site) and ending twelve (12) months after the date of such delivery. This Workmanship Warranty shall be deemed void if Customer does not install, operate and maintain the Element(s) in accordance with the requirements set forth in this Warranty and in DuPont’s published documentation or fails to inform the Supplier of the defect within thirty (30) days from the date on which the defect is noticed or could have been noticed by Customer. Customer’s exclusive remedy, and Supplier’s sole obligation and exclusive liability, under this Workmanship Warranty is expressly limited to the repair or, at Supplier’s discretion, replacement of any Element(s), which is determined by Supplier (as applicable) in its sole discretion, after examination, to be defective under this provision.

* DuPont published documentation mentioned in this System Warranty includes but is not limited to the most recent releases of the following:

- [FilmTec™ Reverse Osmosis Membranes Technical Manual](#) (Form No. 45-D01504-en)
- [Storage and Shipping of New FilmTec™ Elements](#) (Form No. 45-D01633-en)
- [Start-Up Sequence](#) (Form No. 45-D01609-en)
- [Biological Fouling Prevention](#) (Form No. 45-D01567-en)
- [Cleaning Guidelines](#) (Form No. 45-D01696-en)
- Scaling Prevention - [Barium Sulfate Scale Prevention](#) (Form No. 45-D01554-en), [Calcium Sulfate Scale Prevention](#) (Form No. 45-D01553-en), [Strontium Sulfate Scale Prevention](#) (Form No. 45-D01555-en)
- [Shimming Elements](#) (Form No. 45-D01057-en)
- [FilmTec™ Elements Operating Limits](#) (Form No. 45-D00691)
- Product Specifications (See [Attachment A](#))
- DuPont published documentation is available at www.dupont.com/water

Limited Initial
Performance
**Warranty (“Initial
Performance
Warranty”)**

Supplier warrants that, after stabilization, the Element(s) will meet the initial minimum permeate flow and salt rejection under standard test conditions set forth in the specifications in [Attachment A](#), until the first to occur of:

- a. the first thirty (30) days after the first day of Customer’s initial installation and use of any such Element(s) in Customer’s system; or
- b. six (6) months after date of delivery of any such wet Element(s) to carrier at shipping point (manufacturing site); or
- c. twelve (12) months after date of delivery of any such dry Element(s) to carrier at shipping point (manufacturing site).

This Initial Performance Warranty shall be deemed void if Customer does not notify Supplier in writing of the Element(s) failure within 30 days after the first day of operation.

Customer’s exclusive remedy, and Supplier’s sole obligation and exclusive liability, under this Initial Performance Warranty is expressly limited to the repair or, at Supplier’s discretion, replacement of any Element(s) that Supplier determines to be in breach of this Initial Performance Warranty upon Supplier’s inspection. Failure or refusal to disclose to Supplier the use and operating parameters of Elements in the event of alleged failure of performance shall render this Initial Performance Warranty null and void.

Limited System
Performance
**Warranty (“System
Performance
Warranty”)**

Supplier warrants that the Element(s) will have the performance specified in [Attachment C](#) (System Performance Criteria). Design Systems Operating Conditions are provided in [Attachment D](#) for information purposes only.

This system performance warranty is given for a period of THREE (3) years from the first to occur of

- a. Customer’s initial installation and use of any Elements in Customer’s system
- b. Six (6) months after date of delivery of any such wet Element(s) to carrier at shipping point (manufacturing site); or
- c. Twelve (12) months after date of delivery of any such dry Element(s) to carrier at shipping point (manufacturing site).

If Supplier determines that Customer’s claims under this System Performance Warranty are valid, Customer’s exclusive remedy, and Supplier’s sole obligation and exclusive liability under this System Performance Warranty is expressly limited to, at Supplier’s discretion, the repair of the affected Elements, the refund of the purchase paid by Customer for the affected Element(s), or the replacement of the affected Element(s). Notwithstanding, Supplier has no obligation to repair, refund or replace Element(s) that are at or below the quantity of Element(s) to be repaired, refunded or replaced by Customer per the Replacement Rates set forth as follows:

	Replacement Rate (%)
Period	FilmTec™ NF90-400/34i
Year 1	0%
Year 2	27%
Year 3	27%
CARR* after 3 years	18%

* Cumulative Average Replacement Rate.

To the extent that repair, refund or replacement of Elements in the system is not required in any given calendar year then that quantity set forth above shall be carried forward on a cumulative basis and added to the following calendar year replacement rate. During the performance warranty, Supplier will replace or repair Element(s), at Supplier's discretion, in excess of the foregoing cumulative annual replacement rate at Supplier expense. This repair, refund or replacement performance warranty shall be deemed void if Customer does not install, operate and maintain Element(s) in accordance with DuPont's published specifications, the Conditions set forth below, and good engineering practices.

Conditions Voiding
the Initial
Performance and
the System
Performance
Warranty

The THREE (3) year limited system performance warranty and the limited initial performance warranty described above shall be null and void if any of the following conditions are not met:

- a. Customer does not record and maintain, according to Supplier's instructions, operational data according to [Attachment B](#)
- b. Customer fails to provide Supplier with operational data upon request
- c. Customer does not install, operate and maintain the Element(s) in accordance with the requirement set forth in this Warranty and in DuPont published documentation or in accordance with good engineering practices.
- d. Customer fails to meet any of the following conditions pertaining to any Element(s) and the system in which any Element(s) is used:
 - i. The design parameters (array, recovery, etc.) plus instrumentation and other components of the system in which the Element(s) are employed shall be consistent with sound engineering practice. Customer will allow Supplier to review the system design upon Supplier's request.
 - ii. Feedwater temperature must be less than 113°F (45°C) unless otherwise stated in the product data sheet of the element(s) ([Attachment A](#)) or in this warranty document. Refer to [FilmTec™ Elements Operating Limits](#) (Form No. 45-D00691) for warranty voiding conditions and additional information regarding temperature limits.
 - iii. Feedwater SDI (15 min., 30 psi) must be less than 5.0.
 - iv. Feedwater must not contain any colloidal sulfur.
 - v. Feedwater must not contain any oxidizing agents including, without limitation, chlorine, ozone or permanganate.
 - vi. The Element(s) must not be exposed to pressure greater than 1,200 psi for seawater Element(s)s, 600 psi for brackish water Element(s)s and 300 psi for tap water Element(s)s, unless otherwise stated in the product specification or unless otherwise indicated in this warranty document.
 - vii. Backpressure (where permeate static pressure exceeds reject static pressure) must not exceed 5 psi at any time.
 - viii. Sequestrants (and other chemicals used in the system) must be compatible with the Element(s).
 - ix. The Element(s) must not be exposed to a pH of less than 2.0 or more than 11.0 during continuous operation, or a pH of less than 1.0 or more than 13.0 during cleaning unless otherwise indicated in the product specifications or in this Warranty. If pH adjustment is required, chemicals that are compatible with the Element(s) must be used.
 - x. The Element(s) must be operationally protected against excessive hydraulic changes including, without limitation, water hammer, and rapid pressure swings.
 - xi. The Element(s) must be maintained in a clean condition and must not be contaminated by particulate matter, colloidal or precipitated solids, or biological growth; if scaling or fouling should occur, or normalized Element(s) flow decline of 10 percent, cleaning procedures must be employed in accordance with the procedures published in a literature piece entitled [Cleaning Guidelines](#) (Form No. 45-D01696-en).

- xii. The system design, operating and maintenance procedures must contain adequate provisions to ensure against contamination by particulate matter, colloidal or precipitated solids, or biological growth.
- xiii. There must not be scaling caused by failure of the chemical dosing system or ineffective scale- control practices. (e.g., Ca, Ba, or Sr salts).
- xiv. The brine-soluble silica must be less than 150 mg/l at 25°C.
- xv. There must not be damage caused by chemical compounds (e.g. surfactants, solvents, soluble oils, free oils, lipids, and high molecular weight natural polymers).
- xvi. Element(s) must only be cleaned with compatible chemicals and must not be cleaned with nonionic or cationic surfactants, or any other chemical that is not compatible with the Element(s).
- xvii. Customer is responsible for providing the user with adequate system operating and maintenance manuals, operator and supervisor training; and ensuring user's ability to properly perform cleaning and other performance restoration and diagnostic procedures.
- xviii. Customer is responsible for ensuring that frequent, adequate system and subsystem performance data are normalized and routinely recorded in a systematic format regularly reviewed. Customer will make this data available to Supplier on a reasonable basis in the event a claim is made against Supplier pursuant to the Initial Performance Warranty or the 3Yr Performance Warranty.
- xix. Element(s) must be stored in accordance with DuPont's published documentation and specifications.
- xx. Permeate and concentrate obtained from the first hour of operation must be discharged.
- xxi. Field preservation and cleaning of Element(s) must be done in accordance with DuPont's published documentation.
- xxii. Element(s) must be stored in accordance with DuPont's published guidelines.
- xxiii. Customer must keep Element(s) moist at all times after initial wetting.
- xxiv. Supplier will have the final decision on Element(s) replacement or repair necessary to maintain output quality and quantity.
- xxv. Customer's failure or refusal to disclose to Supplier the use and operating parameters of Elements in the event of failure of performance.
- xxvi. Failure of the customer to notify Supplier in writing of the Element(s) failure within 30 days after first non-compliance with performance standards set forth herein.

Conditions voiding
all Warranties

In addition, all the foregoing warranties (i.e. the Workmanship Warranty, the Initial Performance Warrant and the System Performance Warranty) do not cover and shall be null and void if any of the following conditions are not met:

- a. If Customer is not current on all payments due to Supplier, then this warranty is null and void.
- b. Accidental and/or external caused damages and damages caused by improper use are excluded from these warranties. Accidental and/or external caused damages and damages caused by improper use are damages caused by but not limited to operation and/or exposure of Element(s) to conditions, outside the instructions and conditions listed in FilmTec™ Elements' product datasheets and specifications and in this Warranty document. If there is any dispute with respect to the above, the Customer should provide evidence to Supplier.
- c. Expendable parts and components (e.g. o-rings) are specifically outside of these warranties

- d. Damage or malfunction arising from repairs, replacement(s) or substitution(s) not specifically authorized by Supplier are specifically outside of these warranties.
- e. Any defects or faults caused by, or resulting from, inaccurate or incomplete operating process information / process operating parameters, or work performed by the Customer or its authorized representative, are specifically excluded from these warranties.
- f. If Customer does not furnish adequate and competent operating, supervisory and maintenance staff, and necessary laboratory facilities with test equipment and personnel, then these warranties are null and void.
- g. Supplier understands that the Element(s) will be used as a part of a larger water or wastewater treatment process. Supplier must be given the opportunity, with a reasonable notice, to review engineering documents and attend testing and commissioning activities of all aspects of the water or wastewater treatment process which may affect membrane lifetime and performance, or these warranties are null and void. Neither a review of the engineering documents nor attendance of testing or commissioning nor the declining of the opportunity enlarges Supplier's warranties hereunder nor creates any liability or constitutes any endorsement by Supplier for any aspect of the system.
- h. In the case where the Customer and user are separate parties, the Customer has sole and exclusive responsibility for making the user aware of its responsibility under the conditions of these warranties. Failure of the Customer to meet its respective obligations set forth in this Warranty document may invalidate these Warranties.

No other warranties
& Limitation of
Liability

- A. The limited warranties granted herein are the sole warranties provided by Supplier with respect to the Elements (including without limitation with respect to Elements quality and performance) and all other warranties, whether express, statutory or implied, including without limitation any implied warranties of fitness for a particular purpose or merchantability are excluded and disclaimed. Supplier's warranties as hereinabove set forth shall not be enlarged, diminished or otherwise affected by, nor shall any obligation or liability of Supplier arise out of, Supplier's or its affiliates' rendering of technical advice or service in connection with the Elements supplied.
- B. SUPPLIER'S LIABILITY FOR ANY BREACH OF THESE WARRANTIES SHALL BE LIMITED TO THE REMEDIES EXPRESSLY SET FORTH HEREIN. IN NO EVENT SHALL SUPPLIER BE LIABLE FOR ANY DAMAGE, COSTS OR EXPENSES ASSOCIATED WITH WARRANTY, WHETHER FOR THE REPLACEMENT OR REPAIR OF ELEMENTS, INCLUDING LABOR, INSTALLATION OR OTHER COSTS INCURRED BY CUSTOMER AND, IN PARTICULAR, ANY COSTS RELATED TO THE REMOVAL OR REPLACEMENT OF ANY ELEMENTS INCORPORATED INTO A SYSTEM OR OTHERWISE. WITHOUT PREJUDICE TO SUPPLIER'S OBLIGATIONS UNDER THESE WARRANTIES, CUSTOMER ASSUMES ALL RISKS AND LIABILITIES RESULTING FROM THE USE OF THE ELEMENTS. SUPPLIER'S LIABILITY FOR CONSEQUENTIAL, PUNITIVE, SPECIAL, EXEMPLARY OR INCIDENTAL DAMAGES OR FOR LOSS OF PRODUCTION, LOSS OF PROFITS OR REVENUES ARISING OUT OF OR IN CONNECTION WITH THE USE OF THE ELEMENTS OR A BREACH OF THESE WARRANTIES IS EXCLUDED.
- C. Prior to issuing any refund or credit or shipping any replacement of Element(s), Supplier reserves the right to test the alleged defective Element(s) and systems on user's or Customer's premises, or to request Customer to perform such inspections or tests and forward the results thereof to Supplier.

- D. If Element(s) failure is determined by Supplier to be from any cause other than breach of the warranties herein set above, Customer shall pay to Supplier a fee of US\$1,000.00 per day, plus direct travel expenses incurred by Supplier's employees, in connection with any inspection and testing of such Element(s) and system on user's or Customer's premises.
- E. Elements shipped to Supplier for warranty examination must be shipped freight prepaid. Elements examined as part of a warranty claim which are found to be performing as warranted will be returned to the Customer freight collect.
- F. Failure or refusal by Customer to fully disclose to Supplier the use and operating parameters for the Element(s) as set forth in [Attachment B](#), Mandatory Measurement and Recording of Operating Parameters, shall render all warranties other than that covering materials and workmanship null and void.
- G. Warranty of replacement Element(s) will be limited to the duration of these limited warranties.

Warranty Claim and
Notice Procedures

Before returning any Element(s) to Supplier for warranty examination, Supplier must be contacted to obtain a service request number. Any Element(s) shipped to Supplier's facility without proper return documentation will be returned to shipper unopened, freight collected.

The following procedure shall be followed to determine warranty protection:

1. Customer shall send a written notice to Supplier within thirty (30) days of problem occurrence or such other time period as otherwise specified herein or the claim will be deemed waived.
2. Customer shall submit all relevant operating data requested by the Supplier.
3. Supplier will be provided a reasonable time to review the data and make initial recommendations in writing for further evaluation of the claim.
4. Customer will make all reasonable efforts to execute and implement the Supplier's recommendations and collect, record and submit all relevant data resulting from these recommendations.
5. In the event Supplier's initial recommendations do not address and solve the performance issues, the Customer will grant Supplier access to the system and a reasonable time to perform testing and evaluation of Element(s) conditions and performance.
6. In the event Supplier's recommendations address and solve the performance issues, the claim shall immediately be withdrawn and dismissed.
7. In the case the Customer decides not to follow Supplier's recommendations then the claim will be deemed withdrawn and dismissed.

Any defective Element(s) shall be returned to the Supplier at the Customer's expense if so requested by the Supplier in accordance to Supplier's return procedures.

Important
Reminders

- A. Formaldehyde is not recommended as preservation liquid and is not supported as a preservative for drinking water applications. The Element(s) must be in use for at least 24 hours of continuous operation before formaldehyde is used as a biocide. If such Element(s) are exposed to formaldehyde before this period, a severe loss in flux may result.
- B. The use of Element(s) in and of itself does not necessarily guarantee the removal of cysts and pathogens from water. Effective cyst and pathogen reduction is dependent on the complete system design and on the operation and maintenance of the system.

Governing Law

This limited warranty agreement shall be governed by and construed in accordance with the laws of the State of Delaware where the DuPont selling legal entity is established in the U.S.A. or the laws of the country where the DuPont selling legal entity is established in all other cases. The conflict of laws provisions of the applicable law as per the foregoing and the United Nations Convention on Contracts for the International Sale of Goods shall not apply.

Non-assignment

The rights and duties under this limited warranty agreement are not assignable or transferable by either party without the other's written consent, except that Customer hereby consents to Supplier's potential future assignment of some or all of Supplier's obligations hereunder to any affiliate of Supplier without further notice to Customer.

FilmTec™ Membranes

DuPont's Published Data Sheet Specifications

Product Data Sheet

FilmTec™ NF90-400/34i Element

Description

Ideal for: utility managers and operators looking for a technology that delivers high quality permeate water while removing specific contaminants such as salts, nitrates, iron, and organic compounds.

The FilmTec™ NF90-400/34i Element:

- Delivers high productivity and cleanability due to its high active area and widest cleaning pH range (1-13) tolerance
- Offers a nanofiltration technology that selectively removes these components, color and operates at low operating pressures
- Including iLEC™ interlocking end caps, reducing system operating costs and the risk of o-ring leaks that can cause poor water quality

Product Type

Spiral-wound element with polyamide thin-film composite membrane

Typical Properties

FilmTec™ Element	Active Area		Feed Spacer Thickness (mil)	Permeate Flow Rate		Minimum Salt Rejection (%)
	(ft ²)	(m ²)		(GPD)	(m ³ /d)	
NF90-400/34i	400	37	34-LDP	10,000	38	98.7%

1. Permeate flow and salt passage based on the following test conditions: 2,000 mg/l MgSO₄, 70 psi (4.8 bar), 77°F (25°C) and 15% recovery.
2. Flow rates for individual elements may vary but will be no more than +15%.
3. Stabilized salt rejection is generally achieved within 24-48 hours of continuous use; depending upon feedwater characteristics and operating conditions.
4. Sales specifications may vary as design revisions take place.
5. Active area guaranteed ± 3%. Active area as stated by DuPont Water Solutions is not comparable to nominal membrane area often stated by some manufacturers.

Element Dimensions

Dimensions – inches (mm)								1 inch = 25.4 mm	
	A		B		C		D		
FilmTec™ Element	(in.)	(mm)	(in.)	(mm)	(in.)	(mm)	(in.)	(mm)	
NF90-400/34i	40.0	1,016	40.5	1,029	7.9	201	1.125 ID	29 ID	

1. Refer to [FilmTec™ Design Guidelines for multiple-element systems of 8-inch elements](#) (Form No. 45-D01695-en).
2. Element to fit nominal 8-inch (203-mm) I.D. pressure vessel.
3. Individual elements with iLEC™ endcaps measure 40.5 inches (1,029 mm) in length (B). The net length (A) of the elements when connected is 40.0 inches (1,016 mm).

Operating and Cleaning Limits

Maximum Operating Temperature ^a	113°F (45°C)
Maximum Operating Pressure	600 psig (41 bar)
Maximum Element Pressure Drop	15 psig (1.0 bar)
pH Range	
Continuous Operation ^a	2 – 11
Short-Term Cleaning (30 min.) ^b	1 – 13
Maximum Feed Silt Density Index (SDI)	SDI 5
Free Chlorine Tolerance ^c	< 0.1 ppm

- a. Maximum temperature for continuous operation above pH 10 is 95°F (35°C).
- b. Refer to [Cleaning Guidelines](#) (Form No. 45-D01696-en).
- c. Under certain conditions, the presence of free chlorine and other oxidizing agents will cause premature membrane failure. Since oxidation damage is not covered under warranty, DuPont Water Solutions recommends removing residual free chlorine by pretreatment prior to membrane exposure. Please refer to [Dechlorinating Feedwater](#) (Form No. 45-D01569-en) for more information.

Additional Important Information

Before use or storage, review these additional resources for important information:

- [Start-Up Sequence](#) (Form No. 45-D01609-en)

Product Stewardship

DuPont has a fundamental concern for all who make, distribute, and use its products, and for the environment in which we live. This concern is the basis for our product stewardship philosophy by which we assess the safety, health, and environmental information on our products and then take appropriate steps to protect employee and public health and our environment. The success of our product stewardship program rests with each and every individual involved with DuPont products—from the initial concept and research, to manufacture, use, sale, disposal, and recycle of each product.

Customer Notice

DuPont strongly encourages its customers to review both their manufacturing processes and their applications of DuPont products from the standpoint of human health and environmental quality to ensure that DuPont products are not used in ways for which they are not intended or tested. DuPont personnel are available to answer your questions and to provide reasonable technical support. DuPont product literature, including safety data sheets, should be consulted prior to use of DuPont products. Current safety data sheets are available from DuPont.

Please be aware of the following:

- The use of this product in and of itself does not necessarily guarantee the removal of cysts and pathogens from water. Effective cyst and pathogen reduction is dependent on the complete system design and on the operation and maintenance of the system.
- Permeate obtained from the first hour of operation should be discarded.

Regulatory Note

This product may be subject to drinking water application restrictions in some countries; please check the application status before use and sale.

Attachment B

FilmTec™ Membranes

Mandatory Measurement and Recording of Operating Parameters

From the effective date of the Initial Performance Warranty and the system warranty the following items shall be accurately recorded by continuous on-line recording equipment, and/or by manual measurement and recording at least once per operator shift, for each train:

- a. Continuous on-line recording
 - i. Raw and acidified feedwater pH value
 - ii. Conductivity of feedwater and permeate
 - iii. Feedwater residual chlorine concentration.
 - iv. Feedwater pressure.
 - v. Combined total permeate flow rate and conductivity.
 - vi. Acid dosing rate (if used).
 - vii. Antiscalant dosing rate.
 - viii. Feedwater temperature.
 - ix. Permeate Pressure
 - x. Differential pressure between feed and concentrate (Δp)

If the system consists of more than one stage or more than one pass, in addition to the parameters listed above, the following parameters will be required as well for each individual stage of every pass:

- xi. Feed Pressure, Permeate pressure and Δp .
 - xii. Feed and permeate conductivity
 - xiii. Feed and permeate flow
-
- b. Manual measurement / lab testing and recording at least one (1) time per day
 - i. All items of continuous recording listed above.
 - ii. Feed water Silt Density Index, SDI (15min, 30psi).
 - iii. Recovery rate.
 - iv. Train flow balance (total feed, concentrate and permeate).
 - v. Train mass balance (total feed, concentrate and permeate).
 - vi. Train chloride ion balance (total feed, concentrate and permeate).
 - c. Laboratory measurement and recording at least once per month
 - i. Total dissolved solids of feedwater, brine and permeate
 - ii. Complete feedwater analysis for the constituents listed in the water analysis.
 - d. Calibration check of all sensors of continuous recording shall be done at least once per month
Customer shall document and maintain the data in a systematic and presentable format, and shall make the data available to Supplier at Supplier's request.

Attachment 5: **Installation Instructions & Contractor's Responsibilities**

Installation Instructions & Contractor's Responsibilities

Wigen will supply the equipment as skid mounted packages. Please see below for an overview of the Wigen supplied equipment and the contractor's responsibilities.

Nanofiltration Equipment – The NF skids will be skid mounted, fully assembled, Factory Acceptance Tested, and shipped to site assembled for installation by the Contractor. The Contractor will be responsible for all interconnect piping between the NF skids, connection to the Feed, Permeate, Concentrate, and CIP lines as well as all electrical connections to the Wigen supplied skids.

- The Skid Mounted Nanofiltration Trains will be provided will require no on-site assembly
- Each Train will require Contractor installation of the NF Membrane Elements, with Wigen assistance.

RARWTP Utility Connections (By contractor, each NF Skid)

NF Feed Inlet	10" 150# RF Flange
MCS Inlet	8" 150# RF Flange
Permeate Dump	8" 150# RF Flange
Permeate to Clearwell	8" 150# RF Flange
Permeate to CIP	4" 150# RF Flange
Concentrate to Waste	4" 150# RF Flange
Concentrate to CIP	8" 150# RF Flange
Sample Trough Drain	2.0" FNPT
Power Requirements	120 V / 1 Phase / 60 HZ / 15 A
Instrument Air Inlet	0.5" FNPT, 1 CFM @ 80 PSI Minimum

FAWTP UTILITY REQUIREMENTS & CONNECTIONS (by contractor, Each Skid)

NF Feed Inlet	10" 150# RF Flange
MCS Inlet	8" 150# RF Flange
Permeate Dump	8" 150# RF Flange
Permeate to Clearwell	8" 150# RF Flange
Permeate to CIP	4" 150# RF Flange
Concentrate to Waste	4" 150# RF Flange
Concentrate to CIP	8" 150# RF Flange
Sample Trough Drain	2.0" FNPT
Power Requirements	120 V / 1 Phase / 60 HZ / 15 A
Instrument Air Inlet	0.5" FNPT, 1 CFM @ 80 PSI Minimum

RARWTP & FAWTP CIP ITEMS TO BE SHIPPED "LOOSE"

- CIP Tank Level Instruments
- CIP pH Instruments and Transmitter
- CIP Temperature Indicator
- CIP Tank Heaters

FAWTP PERMEATE FLUSH SYSTEM ITEMS TO BE SHIPPED LOOSE

- Permeate Flush Tank Level Transmitter

ITEMS TO BE SUPPLIED BY OTHERS

- Communications wiring from all NF skid Control Panels to the Master PLC/SCADA System.
- Power wiring to all PLC Panels and Remote I/O panels.
- Off-loading and installation of the skid systems and loose items (including membranes) required for full operation of the system.
- Installation of piping between skids.
- Air piping for instrument air to all skids.
- Skid Anchor Bolts.

Attachment 7: Deducts, Clarifications, Exceptions

Deducts & Value Engineering

Richard A. Renneker WTP (RARWTP)

Provide Hydranautics NF/RO elements instead of Dupont NF90: - **\$75,600.00****

****NOTE:** Hydranautics would not confirm that they could meet the specified performance guarantee/warranty, Dupont has confirmed that they can. We have reviewed both the ESPA4 elements and a Hybrid Hydranautics system. Also, the Hydranautics elements are higher rejecting elements than the Dupont NF 90 elements and may require higher feed pressures than Dupont. Which means long term OPEX, specifically pumping costs, will be higher over a 20 year period.

Franklin Area Water Treatment Plant (FAWTP)

Provide Hydranautics NF/RO elements instead of Dupont NF90: - **\$ 43,050.00****

****NOTE:** Hydranautics would not confirm that they could meet the specified performance guarantee/warranty, Dupont has confirmed that they can. We have reviewed both the ESPA4 elements and a Hybrid Hydranautics system. Also, the Hydranautics elements are higher rejecting elements than the Dupont NF 90 elements and may require higher feed pressures than Dupont. Which means long term OPEX, specifically pumping costs, will be higher over a 20 year period.

ADVERTISEMENT FOR BIDS

Sealed bids will be received by the Clerk of the County Commissioners, Warren County, Ohio, 406 Justice Drive, Lebanon, Ohio 45036, until July 16, 2020 @ 2:00 p.m., at the Office of the Warren County Commissioners, and then at said time bids will be opened and read aloud for the Franklin Area Water Treatment Plant Membrane Softening Upgrades Project.

Bid documents and specifications are available online at the Warren County's Website at <http://www.co.warren.oh.us/commissioners/Resources/Bids/Default.aspx>. Questions regarding the technical specifications should be directed to Chris Wojnicz at the Warren County Water and Sewer Department, (513) 695-1646. Each bid shall contain the full name of each person or company submitting the bid and be accompanied by a bid bond for the full amount of the bid or a certified check in the amount equal to ten (10) percent of the bid.

Questions regarding the technical specifications shall be submitted electronically to the Engineer:

Miranda Scheitlin, EI

Miranda.scheitlin@aecom.com

614-600-5804

A non-mandatory pre-bid meeting has been scheduled for June 30, 2020 @ 10.00 a.m. at the Shelly Booster Pump Station, 6648 Shelly Street, Franklin, Ohio. The County will review the project requirements with potential bidders, and receive questions. A visit to the project site will be conducted after the meeting. Contact the Warren County Commissioners Office at (513) 695-1250 should you need assistance in accessing the bidding information on the County website,

The project description: The project generally consists of the construction of a membrane softening addition to the existing Franklin Area Water Treatment Plant to treat 9.6 MGD (expandable to 15.0 MGD) of groundwater. Improvements include a new nanofiltration softening building complete with NF softening equipment, pumps, process piping, valves, degasifiers, chemical feed systems, all associated architectural, structural, HVAC, plumbing, electrical, instrumentation and controls work shown on the plans.

The Engineer's opinion of probable construction cost is \$16,257,000.

This notice is posted on the Warren County Government internet site. The Warren County Web Site can be accessed at <http://www.co.warren.oh.us/commissioners/Resources/Bids/Default.aspx>. To access bid project information, under the "Your Government" heading click on the "Board of Commissioners" tab, then click on the "Bid Projects" tab and choose the project you wish to obtain information about. Please contact the Warren County Commissioners Office at (513) 695-1250 if you have trouble with this procedure or if you need additional information on accessing bid project information on our web site. Please be aware that if you are downloading this document to bid this project, addendums to the scope may be issued prior to the bid date. In order to stay updated on any change, please email Kiana Hawk in the Commissioner's Office at Kiana.Hawk@co.warren.oh.us with your contact information.

The Board of Warren County Commissioners reserve the right to accept the lowest and best bid, to reject all bids, and to waive any irregularities in bids.

By order of the Board of County Commissioners, Warren County, Ohio.

Tina Osborne, Clerk

The Pulse Journal:

Please publish the above advertisement one (1) time, the week of June 28, 2020 and send invoice to the Warren County Commissioners.
